**Understanding education: a sociological perspective**, by S. Gewirtz and A. Cribb, Cambridge, Polity Press, 2009, 240 pp., £15.99 (paperback), ISBN 978-0-74-563345-9

**Reviewed by Maria Balarin, Rob Moore, and Ronald G. Sultana**

In a field like sociology of education, which has tended towards the proliferation rather than integration of theories, this book provides a starting point to bridge some of the central debates and perspectives. In this respect, the book can be read as part of a current and much welcome trend that seeks to overcome the objectivist/subjectivist divide in social theorising. The authors do this by carefully charting the field through a discussion of some of the central issues that have dominated it and of the perspectives from which these issues have been approached.

Throughout the book, the authors highlight the importance of the normative agenda in the sociology of education, which provides a heuristic tool to navigate the disparate and often contradictory claims made by sociologists working from different perspectives, and constitutes a key element in the practice of 'reflexive' sociology that they seek to advance. This focus on the normative – that is, on researchers' values and on the ethical and political concerns that implicitly or explicitly shape different research agendas – sets the ground from which to judge competing claims about educational issues. The ethical reflexivity that the authors advocate thus constitutes an essential element of academic rigour, which they place alongside epistemic and methodological rigour.

The claim made in the book about the pervasive and inescapable presence of the normative dimension in sociological research somewhat echoes the idea first advanced by Dale (2001) and recently retaken by Lauder, Brown, and Halsey (2010) that sociology of education is characterised by a 'redemptive' agenda, characterised by concerns with inequality and inclusion. Gewirtz and Cribb add to this by exploring the different and often contradictory criteria that are necessary to judge knowledge production and use. It is in relation to the latter – that is, to considerations about the practical and policy implications of knowledge – that ethical reflexivity becomes crucial. The authors' concerns in relation to the ethical and political dimensions of sociological research, however, does not amount to equating knowledge with power, as they emphasise that ethical reflexivity needs to be set alongside cognitive criteria

**Understanding Education** Sharon Gewirtz, Alan Cribb, 2009-09-28 Who should be educated when by whom and how What purposes should education serve Why does education matter These fundamental questions of value are not always seen as central to the sociology of education However

this book argues that they are pivotal and provides a sophisticated and engaging introduction to the field that is designed to open up these important debates. It draws attention to the many points of disagreement that exist between major thinkers in the sociology of education and the values on which their ideas are based. By involving readers in crucial questions about the potential contribution of sociology to education policies and practices, it aims to bridge the divide between education as it is talked about by academics and the concerns of policymakers and educators who have to make practical decisions about what is to be done. Chapter by chapter, the book introduces competing approaches in the sociology of education: structural functionalism, symbolic interactionism, Marxism, feminism, critical race theory, and poststructuralism. It shows how these can be applied to major themes such as social reproduction, the politics of knowledge, multicultural education, identity, and teachers' work. Throughout, the authors emphasise the importance of understanding social and educational values and the ways in which these underpin and impact upon the work of both academics and educators.

### **Resources in Education**

,1996-07      **Demystifying Academic Reading** Zhihui Fang,2023-09-29 Foundational and accessible, this book equips pre-service and practicing teachers with the knowledge, understanding, tools, and resources they need to help students in grades 4-12 develop reading proficiencies in four core academic subjects: literature, history, science, and mathematics. Applying a disciplinary literacy approach, Fang describes the verbal and visual resources, expert strategies, inquiry skills, and habits of mind that students must learn in order to read carefully, critically, purposefully, and with an informed skepticism across genres and content areas. He also shows how teachers can promote language learning and reading literacy development at the same time that they engage students in content area learning. With informative synthesis and research-based recommendations in every chapter, this text prepares teachers to help students develop discipline-specific as well as discipline-relevant discursive insights, literacy strategies, and ways of thinking, reasoning, and inquiring that are essential to productive learning across academic subjects. It also provides teacher educators with approaches and strategies for helping teacher candidates develop expertise in academic reading instruction. In so doing, the book demystifies academic reading, revealing what it takes for students to read increasingly complex academic texts with confidence and understanding and for teachers to develop expertise that promotes disciplinary literacy. This state-of-the-art text is ideal for courses on reading literacy methods and academic literacy and is eminently relevant to all educators who want their students to become thoughtful readers and powerful learners.

*Disability & the Politics of Education* Susan Lynn Gabel, Scot Danforth,2008 *Disability and the Politics of Education: An International Reader* is a rich resource that deals comprehensively with the many aspects of the complex topic of disability studies in education. For nearly two decades, global attention has been given to education as a human right through global initiatives such as Education for All (EFA) and the Salamanca Statement. Yet according to UNESCO, reaching the goals of EFA remains one of the most daunting challenges facing the global community. Today, millions of the world's disabled children cannot obtain a basic childhood education, particularly in countries with limited resources. Even in the

wealthiest countries many disabled children and youth are educationally segregated from the nondisabled particularly if they are labeled with significant cognitive impairment International agencies such as the United Nations and the World Bank have generated funds for educational development but unfortunately these funds are administered with the assumption that west is best thereby urging developing countries to mimic educational policies in the United States and the United Kingdom in order to prove their aid worthiness This McDonaldization of education reproduces the labeling resource allocation and social dynamics long criticized in disability studies The authors in this volume explore these subjects and other complexities of disability and the politics of education In doing so they demonstrate the importance and usefulness of international perspectives and comparative approaches
