The Physics of Skiing David A. Lind, Scott P. Sanders, 2013-06-29 Just over ten years ago when the first drafts of this book were being written and even more so a few years after that as it was making its way through the publication process alpine skiing was experiencing what eventually became a complete revolution in equipment and technique shaped or parabolic skis completely took over the market and even relatively beginning skiers expected to carve graceful turns as they schussed down the slopes Re-reading our work with an eye to revision we have been surprised to see how our focus on the physics of skiing in the first edition allowed us to recognize the fundamental importance of what were then quite novel changes in equipment and technique The essence of the enhancement offered by shaped skis is their greater sidecut radius Our original discussion then and now in Chapters 3 and 4 of the crucial role that a ski's sidecut plays in carving a turn caused us to write for the most part as if the shaped ski had always been in existence Similarly our interest in the geometry of the sidecut allowed us to discuss snowboards in some detail as well for the key to their ability to shred down the mountain is their deep sidecut

Skiing Mechanics John Howe, 1983 In this comprehensive book former Director of Product Development at Head Ski Co John G Howe explains the mechanics of skiing and ski design including theory of sidecut and short radius carving skis

Downhill ski technique, step by step Janos Koranyi, 2019-04-20 This book is especially written for all insecure skiers in the first place If you think that you are a beginner or an intermediate skier this book is thought to be the right choice for you But everyone interested in understanding developing learning and teaching downhill skiing can benefit from this work I have been working on this material since 2010 and the work is still going on My basic point is that you

should prepare yourself before you go to ski It is too late to make your mental preparation on the slopes this should be done at home before You should be able to imagine for yourself what you must do in order to do it right or as good as possible This imagination should not be just a picture It should be like a whole movie with many of your senses involved just like in a detailed dream Like if you can imagine the whole ski turn with many clear details what basic movements you have to do how it should feel in your body how it should look like how it should change during the development of your turn this will prepare your correct movements in the real life But this must happen step by step starting by the easiest skills and developing further when you have tried out the first steps first For this reason I have divided the material in 3 different levels You will need quite a long time for this So please be patient take your time work with my book do not just read it Understanding and explaining skiing is complicated and it takes time My suggestion is to read carefully take several breaks and think carefully about the sections you find difficult to understand If you are a beginner start reading the book as soon as possible before your start your skiing You can stop reading after the beginner level and go skiing on green and blue slopes The homepage of the book <https://skiingtechnique.wordpress.com> If this link does not work write the link into an internet browser google or other You can also find a short free book about downhill ski tech on my homepage **Skiing** ,1977-09 Skiing ,1981-01
