of social emotional skills One of the key assumptions is that social and emotional attributes are malleable by means of educational interventions The book reviews available research evidence for this assumption taking into account psychological studies and meta analyses It then creates new evidence based on a new meta analysis which concentrated on the effects of educational interventions on skills associated with the conscientiousness factor of the Big5 taxonomy In the final chapter the book discusses the implications for educational policy and practice a discussion in which attention is given to political and ethical questions about the desirability of treating social and emotional attributes as educational goals *Gender*
