Feminism and Men Steven Schacht, Doris Ewing, 1998-10 Too often feminism has been defined as a woman only arena or in competitive terms of male versus female privilege rather than as a cooperative effort to improve the quality of life for everyone Indeed a good deal of feminist scholarship has failed to take into account the relational nature of gender preferring instead to focus on the ways in which men and women are irreconcilably opposed With a view to beginning a more constructive dialogue between women and men the contributors to *Feminism and Men* argue that the feminist movement can no longer stand to view with suspicion those men who have proved themselves sympathetic to issues of gender equity Bringing together the work of scholars across various disciplines committed to maximizing the inclusion of pro feminist men in the feminist movement the book convincingly demonstrates how and why feminist goals cannot be realized until men and women come together to eliminate the shared harm of patriarchal realities Contributors include R W Connell Riane Eisler Kay Leigh Hagan bell hooks Christine A James Robert Jensen Michael S Kimmel Gary Lemons Michael Messner Matthew Shepherd and John Stoltenberg

Mixed Methods Research for Improved Scientific Study Baran, Mette Lise, Jones, Janice Elisabeth, 2016-03-17 The clear division between quantitative and qualitative research methods becomes problematic when students begin conducting extensive research for the first time often as part of a master's thesis or dissertation In order to handle such complexities in the selection of research methods a Mixed Methods Research MMR approach is one proposed solution Mixed Methods Research for Improved Scientific Study seeks to demonstrate how mixed methods research designs can address a wide array of scientific questions across disciplines Focusing on essential concepts and methods for a hybrid approach to quantitative and qualitative research methods for real world implementation this publication is ideally designed for students and researchers interested in refining their research skills as well as educators seeking to integrate research methods coursework into the graduate curriculum

Population in the Human Sciences Philip Kreager, Bruce Winney, Stanley Ulijaszek, Cristian Capelli, 2015-03-05 The Human Sciences address problems in nature and society that often require coordinated approaches of several scientific disciplines and scholarly research embracing the social and biological sciences and history When we wish for example to understand how some sub populations and not others come to be vulnerable why a disease spreads in one part of a population and not another or which gene variants are transmitted across generations then a remarkable range of disciplinary perspectives need to be brought together from the study of institutional structures cultural boundaries and social networks down to the micro biology of cellular pathways and gene expression The need to explain and address differential impacts of pressing contemporary issues like AIDS ageing social and economic inequalities and environmental change are

well known cases in point Population concepts models and evidence lie at the core of approaches to all of these problems if only because accurate differentiation and identification of groups their structures constituents and relations between sub populations are necessary to specify their nature and extent The study of population thus draws both on statistical methodologies of demography and population genetics and sustained observation of the ways in which populations and sub populations are formed maintained or broken up in nature in the laboratory and in society In an era in which research needs to operate on multiple levels population thinking thus provides a common ground for communication and critical thought across disciplines Population in the Human Sciences addresses the need for review and assessment of the framework of interdisciplinary population studies Limitations to prevailing postwar paradigms like the Evolutionary Synthesis and Demographic Transition were becoming evident by the 1970s Subsequent decades have witnessed an immense expansion of population modelling and related empirical inquiry with new genetic developments that have reshaped evolutionary population and developmental biology The rise of anthropological and historical demography and social network analysis are playing major roles in rethinking modern and earlier population history More recently the emergence of sub disciplines like biodemography and evolutionary anthropology and growing links between evolutionary and developmental biology indicate a growing convergence of biological and social approaches to population
