Towards a neuroscience of social interaction Ulrich Pfeiffer,Bert Timmermans,Kai Vogeley,Chris Frith,Leonhard Schilbach, The burgeoning field of social neuroscience has begun to illuminate the complex biological bases of human social cognitive abilities However in spite of being based on the premise of investigating the neural bases of interacting minds the majority of studies have focused on studying brains in isolation using paradigms that investigate offline social cognition i e social cognition from a detached observer s point of view asking study participants to read out the mental states of others without being engaged in interaction with them Consequently the neural correlates of real time social interaction have remained elusive and may paradoxically represent the dark matter of social neuroscience More recently a growing number of researchers have begun to study online social cognition i e social cognition from a participant s point of view based on the assumption that there is something fundamentally different when we are actively engaged with others in real time social interaction as compared to when we merely observe them Whereas for offline social cognition interaction and feedback are merely a way of gathering data about the other person that feeds into processing algorithms inside the agent it has been proposed that in online social cognition the knowledge of the other at least in part resides in the interaction dynamics between the agents Furthermore being a participant in an ongoing interaction may entail a commitment toward being responsive created by important differences in the motivational foundations of online and offline social cognition In order to promote the development of the neuroscientific investigation of online social cognition this Frontiers Research Topic aims at bringing together contributions from researchers in social neuroscience and related fields whose work involves the study of at least two individuals and sometimes two brains rather than single individuals and brains responding to a social context

Specifically this Research Topic will adopt an interdisciplinary perspective on what it is that separates online from offline social cognition and the putative differences in the recruitment of underlying processes and mechanisms Here an important focal point will be to address the various roles of social interaction in contributing to and at times constituting our awareness of other minds For this Research Topic we therefore solicit reviews original research articles opinion and method papers which address the investigation of social interaction and go beyond traditional concepts and ways of experimentation in doing so While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies psychophysiological investigations methodological innovations computational approaches developmental and patient studies By focusing on cutting edge research in social neuroscience and related fields this Frontiers Research Topic will create new insights concerning the neurobiology of social interaction and holds the promise of helping social neuroscience to really go social **Information Technology in Health Care 2007** Johanna Westbrook,Johanna I. Westbrook,2007 This volume presents the papers from the 3rd International Conference on Technology in Health Care Socio technical Approaches held in Sydney Australia in 2007 Evaluating the Organizational Impact of Health Care Information Systems James G. Anderson,Carolyn Aydin,2006-04-07 Evaluating the Organizational Impact of Health Care Information Systems Second Edition is heavily updated and revised from its First Edition which is entitled Evaluating Health Care Information Systems Methods and Applications The much needed Second Edition is a guide for evaluating the organizational impacts of computer systems in health care institutions It provides a practical guide for determining the appropriate questions to ask based on underlying models of change and the most effective methods available An introduction to various methods is provided as well as appendices containing survey instruments usable in research and evaluation computer programs for data analyses and other evaluation resources The book provides a critical overview of current research and evaluation to date with numerous bibliographic references from health care and other fields The methods and instruments described are applicable to a wide variety of other organizations that utilize information technology and they emphasize the importance of clearly specifying the purpose of the evaluation recognizing assumptions about organizational change and using a multi method approach to system evaluation The material presented is drawn from a variety of social and health science disciplines in order to integrate the study of information system with social science theory and methods Chapter highlights include Cognitive Approaches to Evaluation Computer Simulation as an Evaluation Tool and Research and Evaluation Future Directions Evaluating the Organizational Impact of Health Care Information Systems Second Edition is timely since annual investment in information technology by health care organization in the U S now exceeds 15 billion It will prove valuable to physicians nurses other health care providers health care administrators information systems personnel and consultants who are involved in planning developing implementing utilizing and evaluating computer based health care systems **Communication and Health** Eileen Berlin Ray,Lewis Donohew,2013-11-05 This volume examines this rapidly

Communication and Aging Jon F. Nussbaum,Loretta L. Pecchioni,James D. Robinson,Teresa L. Thompson,2013-05-13 This text employs a communication perspective to examine the aging process and the ability of individuals to adapt successfully to aging It continues the groundbreaking work of the first edition emphasizing a life span approach toward understanding the social interaction that occurs during later life The edition provides a comprehensive update on the existing and emerging research within communication and aging studies and considers such topics as notions of successful aging positive and negative stereotypes toward older adults and health communication issues It raises awareness of the barriers facing elderly people in conversation and the importance such conversations have in elderly people s lives The impact of nonrelational processes such as hearing loss are considered as they impact relationships with others and affect the ability to age successfully The book is organized into 14 chapters Each chapter is written so that the reader is presented with an exhaustive review of the pertinent and recent literature from the social sciences As in the first edition when the literature is empirically based the communicative ramifications are then discussed Readers of this volume will gain greater understanding of the importance of their communicative relationships and how significant they remain across the life span Developed for students in communication psychology nursing social gerontology sociology and related areas Communication and Aging provides important insights on communication to all who are affected by the aging process The Making and Breaking of Minds: How social interactions shape the human mind Isabella Sarto-Jackson,2022-04-05 The human brain has a truly remarkable capacity It reorganizes itself flexibly adjusting to fluctuating environmental conditions a process called neuroplasticity Neuroplasticity provides the basis for wide ranging learning and memory processes that are particularly profuse during childhood and adolescence At the same time the exceptional malleability of the developing brain leaves it highly vulnerable to negative impact from the surroundings Abusive or neglecting social environments as well as

socioeconomic deprivation and poverty cause toxic stress and complex traumas that can severely compromise cognitive development emotional processing self perception and executive brain functions The neurophysiological changes entailed impair emotional regulation lead to heightened anxiety and afflict attachment and the formation of social bonds Neuroplastic changes following severely adverse experiences are not something that a person grows out of and gets over These experiences alter the neurobiological and biochemical makeup and cause people to live in an emotionally relabeled world in which the evaluation of any social cue their behavior cognition and state of mind are biased towards the negative Even more worrying detrimental neurophysiological consequences are not limited to the traumatized individual but are often transmitted to subsequent generations through a process of social niche construction thereby creating a vicious cycle Thus the making and breaking forces of the brain are epitomized by parents alloparents peers and our socioeconomic niche This book expounds on the formative role that the social environment plays in healthy brain development especially during infancy childhood and adolescence Based on scientific findings the book advocates for bold measures and responsible stewardship to combat child abuse maltreatment and child poverty By bringing together insights from neuroscience evolutionary biology and social education work it lays out a fact based transdisciplinary endeavor that aims at rising to the societal challenge of providing a rewarding perspective to youth at risk It will be a valuable resource for academics from social education pedagogy cognitive science neuroscience as well as professionals in the fields of social work pedagogy education child welfare **Rationality in Social Interactions** Guido Olschewski,2009 The analysis of human decision making in social sciences is often based on a conception of rationality This dissertation contains three microeconomic models which directly build on the rationality assumption in economic theory We model agents endowed with rational preferences and analyze how such preferences translate into decisions in a given social interaction In particular we present three different models 1 Arrovian social choice theory with delegation as a feasible policy alternative 2 Game theory and the existence of mental equilibrium in 2x2 games 3 Information economics and its application to analyzing stakeholder participation in electronic health record networks *Gender, Women's Health Care Concerns and Other Social Factors in Health and Health Care* Jennie Jacobs Kronenfeld,2018-09-18 This book analyses micro level gender issues and other social factors impacting macro level health care systems Examining the health and health care issues of patients and providers of care both in the United States and in other countries chapters focus on linkages to policy and population concerns as ways to meet global health care needs **Social Determinants, Health Disparities and Linkages to Health and Health Care** Jennie Jacobs Kronenfeld,2013-09-23 This volume looks at the key links between social determinants health disparities and health and health care There is a particular focus on macro level systems and micro level issues including the examination of issues for patients carers and providers of care **Social Interactions in Adolescence and Promoting Positive Social Contributions of Youth** Richard M. Lerner,Daniel F. Perkins,1999 First published in 1999 Routledge is an imprint of Taylor

Francis an informa company *Emotion, Social Relationships, and Health* Carol D. Ryff,Burton H. Singer,2001-05-03 This volume brings together for the first time inquiries into the size and proximity of social networks and emotion in social relationships to advance understanding of how emotion in significant social relationships influences health The collection integrates knowledge from those with expertise in mapping the nature of emotional experience in human relations with those who are linking social ties to health outcomes and those who explicate underlying neurobiological mechanisms The book puts forth the idea that full explication of how emotion social relationships and health are woven together demands multidisciplinary inquiry and brings together leading experts from fields of affective science clinical and social psychology epidemiology psychiatry psychoneuroimmunology psychoneuroendocrinology and health to promote the above synthesis
