Social Production Of Technical Work:

The Social Production of Technical Work Peter Whalley, 1986-01-01 Engineers appear in recent social science as central though somewhat elusive figures They play a particularly critical role in the various attempts to understand the impact of science based industry on the class structure of advanced capitalist societies In this book Peter Whalley brings these engineers into sharper focus He argues that engineers should not be seen as members of a glamorous new class of professionalized knowledge workers nor as a radicalized new working class or partially de skilled technical proletariat Rather they should be viewed as trusted employees selected socialized trained and rewarded to perform the discretionary tasks necessarily delegated by employers in the complex organizations of advanced capitalism The book draws extensively on observations and interviews to compare engineers work and understanding in the high and low tech settings of two British companies Computergaph an advanced electronics firm and Metalco a traditional British engineering giant Whalley compares the technical work structure of Britain with those of France and the United States He argues that the impact of technological change on class structure is critically mediated by nationally specific modes of organizing technical work and producing trusted workers The book goes beyond cultural explanations of these national variations to examine how they are created and reproduced in the organization of work and the structuring of occupations Research in Social Stratification and Mobility Kevin T Leicht, 2001-02-13 This text reflects the growing diversity of perspectives methods and insights currently used in social stratification research Authors discuss the following broad themes from an international perspective the changing real and symbolic boundaries of social stratification who benefits from rapidly changing markets immigration marginalization and exclusion and modelling occupational mobility The contributions demonstrate the changing nature of social stratification systems in today s global and fragmented economy **Daily Report, Foreign Radio Broadcasts** United States. Gasser,William Turner,2014-05-12 This book is the first to directly address the question of how to bridge what has been termed the great divide between the approaches of systems developers and those of social scientists to computer supported cooperative work a question that has been vigorously debated in the systems development literature Traditionally developers have been trained in formal methods and oriented to engineering and formal theoretical problems many social scientists in the CSCW field come from humanistic traditions in which results are reported in a narrative mode In spite of their differences in style the two groups have been cooperating more and more in the last decade as the people problems associated with computing become increasingly evident to everyone The authors have been encouraged to examine rigorously and in depth the theoretical basis of CSCW With contributions from field leaders in the United Kingdom France Scandinavia Mexico and the United States this volume offers an exciting overview of the cutting edge of research and theory It constitutes a solid foundation for the rapidly coalescing field of social informatics Divided into three parts this volume covers social theory design theory and the sociotechnical system with respect to CSCW The first set of chapters looks at ways of rethinking basic social categories with the development of distributed collaborative computing technology concepts of the

group technology information user and text The next section concentrates more on the lessons that can be learned at the design stage given that one wants to build a CSCW system incorporating these insights what kind of work does one need to do and how is understanding of design affected The final part looks at the integration of social and technical in the operation of working sociotechnical systems Collectively the contributors make the argument that the social and technical are irremediably linked in practice and so the great divide not only should be a thing of the past it should never have existed in the first place
