

Smokers also impose health care costs on nonsmokers.

- Smokers usually incur higher health care costs.
 - ◆ But nonsmokers die prematurely from passive smoking, smoking-related fires.
- The total external costs of cigarette smoking are estimated to be 15¢ per pack. (Manning et al., 1991)

Societal Costs Of Cigarette Fires:

Federal Register ,2008-03 **The Economics of Smoking** Robert D. Tollison,Richard E. Wagner,2012-12-06

Cigarettes are under political attack at all levels of government in the United States From Washington D C to state capitals to local govern ments proposals abound to increase the cigarette excise tax to impose smoking bans to prevent cigarette advertising to restrict the sale of cigarettes through vending machines to cut off the export of cigarettes to earmark the cigarette excise tax for health programs to divest the stock of cigarette companies and so on And all of these are purportedly being advocated in the name of health Undergirding and abetting the health argument is an economic argument that claims to place a value of up to 100 billion per year on the alleged health costs of smoking to the American economy which is more than 3 per pack of cigarettes smoked As our title suggests our interest lies in the economics of smoking and not in the health issues surrounding smoking We are professional economists and not medical scientists We will focus on what if any economic consequences arise for nonsmokers when smokers smoke For purposes of our discussion we simply accept the premise that smoking damages health and proceed with our analysis Since we have not studied the issue ourselves we have no way of knowing whether such a premise is true But it really does not matter for getting the economics of smoking right The important point resides in who pays for whatever to smoking **Societal Costs of Cigarette Fires** ,1993 **Fire Safe**

with tobacco are much greater than previously assumed. Out of two regular smokers one will die from a tobacco related disease.
2 Reducing tobacco consumption can be achieved but the data collected in several countries show that it requires a global strategy. This strategy was much debated during the conference.
The resolutions adopted emphasize the agreement of the delegates on the main points: Action to fight the growing epidemic of tobacco attributable disease and death involves convincing the general public, the medical community and decision makers of the need to act for tobacco control. The most efficient tools for helping individuals never to start or successfully to stop using tobacco should be developed. Effective tobacco control endeavors are required to counteract the actions of the powerful and influential tobacco manufacturers. With the help and under the aegis of WHO, DICC, IUATLD, ISFC, IOCD and IUHPE, an international alliance for health and against tobacco should unite all those who are engaged in this fight.
