Society Technology And Risk Assessment:

Society, Technology, and Risk Assessment Jobst Conrad, 1980 Risk and Society: The Interaction of Science, Technology and Public Policy M Waterstone, 2012-12-06 Life in the last quarter of the twentieth century presents a baffling array of complex issues The benefits of technology are arrayed against the risks and hazards of those same technological marvels frequently though not always arising as side effects or by products This confrontation poses very difficult choices for individuals as well as for those charged with making public policy Some of the most challenging of these issues result because of the ability of technological innovation and deployment to outpace the capacity of institutions to assess and evaluate implications In many areas the rate of technological advance has now far outstripped the capabilities of institutional monitoring and control While there are many instances in which technological advance occurs without adverse consequences and in fact yields tremendous benefits frequently the advent of a major innovation brings a wide array of unforeseen and to some undesirable effects This problem is exacerbated as the interval between the initial development of a technology and its deployment is shortened since the opportunity for cautious appraisal is decreased *Society, Technology and Risk Assessment* , **Technological Risk Assessment** P.F. Ricci, L.A. Sagan, C.G. Whipple, 2012-12-06 Proceedings of the NATO Advanced Study Institute on Technological Risk Assessment Erice Sicily Italy May 20 31 1981 Risk In The Technological Society Chris Hohenemser, Jeanne X Kasperson, 2019-06-26 In this book representatives of government industry universities and public interest groups consider the emerging art of risk assessment and discuss the issues and problems involved They look at two failures in technological risk management Three Mile Island and Love Canal examine the dimensions of technological risk tackle the difficult question of how safe is safe enough and offer a set of research priorities **The Analysis of Actual Versus Perceived Risks** V.T. Covello, W.Gary Flamm, Joseph V. Rodricks, Robert G. Tardiff, 2012-12-06 In 1980 a group of scientists from national laboratories universities and other research organizations gathered informally in a series of meetings to consider the state of research on risks to health safety and the environment Each scientist had conducted research on the subject All felt that the traditional disciplines and professional societies to which they belonged were neither adequate nor appropriate for addressing the extraordinarily complex problems of assessing the risks inherent in modern society The consensus of the group was that a new society was needed to address these problems in a scientific and objective way From these initial meetings the Society for Risk Analysis was formed The major aims of the Society for Risk Analysis as stated in its constitution are to promote knowledge and understanding of risk analysis techniques and their applications to promote communication and interaction among those engaged in risk analysis and to disseminate risk analysis information and promote the advancement of all aspects of risk analysis Members of the Society are drawn from a variety of disciplines including the health sciences engineering the physical sciences the humanities and the behavioral and social sciences An important function of the Society is the annual meeting at which various aspects of risk analysis are discussed

The first annual meeting represented by this volume was the International Workshop on the Analysis of Actual vs Lees' Loss Prevention in the Process Industries Frank Lees, 2005-01-10 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport Plants have become larger and are often situated in or close to densely populated areas Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough Bhopal Chernobyl Three Mile Island the Phillips 66 incident and Piper Alpha to name but a few The field of Loss Prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property This book is a detailed guidebook to defending against these and many other hazards It could without exaggeration be referred to as the bible for the process industries This is THE standard reference work for chemical and process engineering safety professionals For years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead Frank Lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field Sam Mannan is professor of chemical engineering at Texas A principles practice codes standards data and references needed by those practicing in the field

Low-Probability High-Consequence Risk Analysis Ray Waller, 2013-11-21 In recent years public attention has focused on an array of low probability high consequence LC HC events that pose a significant threat to human health safety and the environment At the same time public and private sector responsibilities for the assessment and management of such events have grown because of a perceived need to anticipate prevent or reduce the risks In attempting to meet these responsibilities legislative judicial regulatory and private sector institutions have had to deal with the extraordinarily complex problem of assessing and balancing LP HC risks against the costs and benefits of risk reduction The need to help society cope with LP HC events such as nuclear power plant accidents toxic spills chemical plant explosions and transportation accidents has given rise to the development of a new intellectual endeavor LP HC risk analysis The scope and complexity of these analyses require a high degree of cooperative effort on the part of specialists from many fields Analyzing technical social and value issues requires the efforts of physicists biologists geneticists statisticians chemists engineers political scientists sociologists decision analysts management scientists economists psychologists ethicists lawyers and policy analysts Included in this volume are papers by authors in each of these disciplines The papers share in common a focus on one or more of the following questions that are generic to the analysis of LP HC risks

allow a characterization of the risk in technology innovation and clarify the mechanisms underpinning emergent technological risk Emerging Technological Risk provides an interdisciplinary account of risk in socio technical systems including hazards which highlight How technological risk crosses organizational boundaries How technological trajectories and evolution develop from resolving tensions emerging between social aspects of organisations and technologies and How social behaviour shapes and is shaped by technology Addressing an audience from a range of academic and professional backgrounds Emerging Technological Risk is a key source for those who wish to benefit from a detail and methodical exposure to multiple perspectives on technological risk By providing a synthesis of recent work on risk that captures the complex mechanisms that characterize the emergence of risk in technology innovation Emerging Technological Risk bridges contributions from many disciplines in order to sustain a fruitful debate Emerging Technological Risk is one of a series of books developed by the Dependability Interdisciplinary Research Collaboration funded by the UK Engineering and Physical Sciences Research Council

Risk Analysis and Decision Processes H.C. Kunreuther, J. Linnerooth, J. Lathrop, H. Atz, S. Macgill, C. Mandl, Martin Schwarz, M. Thompson, 2012-12-06 For old and new studies in decision making and risk analysis this book should stand at the watershed Studies of conflict resolution and public policy will surely now have to take account of the model investigation provided by the IIASA team and many things will not be the same again This is a report of inquiries into the siting of liquefied energy gas LEG facilities in the Federal Republic of Germany the Netherlands the United Kingdom and the United States The risks of transporting this highly combustible stuff and the economic benefits of being able to bring a natural energy source from one side of the globe to the other holding it and piping it out as needed make LEG a model case for studying the public response to dangerous technology The dangers of LEG are different from those of nuclear power for instance where the response too often becomes entangled with the fear of nuclear war The dangers of LEG include uncontrollable explosions rather than insidious contamination But the degree of dangerousness is very much of the same order as that of nuclear power and is at least as difficult to assess In four different countries the constitutional procedures involved in obtaining approval of nuclear or LEG facilities are on record The four case histories here are a model for comparative study of conflict resolution The period over which the negotiations developed is much the same

Handbook of Environmental Risk Assessment and Management Peter P. Calow, 2009-07-08 At the heart of environmental protection is risk assessment the likelihood of pollution from accidents the likelihood of problems from normal and abnormal operation of industrial processes the likely impacts associated with new synthetic chemicals and so on Currently risk assessment has been very much in the news the risks from BSE and E coli and the public perception of risks from nuclear waste etc This new publication explains how scientific methodologies are used to assess risk from human activities and the resultant objects and wastes on people and the environment Understanding such risks supplies crucial information to frame legislation manage major habitats businesses and industries and create development programmes Unique in combining the science of risk assessment with

Rationality and Ritual Brian Wynne, 2013-11-12 In Rationality and Ritual internationally renowned expert Brian Wynne offers a profound analysis of science and technology policymaking By focusing on an episode of major importance in Britain's nuclear history the Windscale Inquiry a public hearing about the future of fuel reprocessing he offers a powerful critique of such judicial procedures and the underlying assumptions of the rationalist approach This second edition makes available again this classic and still very relevant work Debates about nuclear power have come to the fore once again Yet we still do not have adequate ways to make decisions or frame policy deliberation on these big issues involving true public debate rather than ritualistic processes in which the rules and scope of the debate are presumed and imposed by those in authority The perspectives in this book are as significant and original as they were when it was written The new edition contains a substantial introduction by the author reflecting on changes and lack of in the intervening years and introducing new themes relevant to today's world of big science and technology that can be drawn out of the original text A new foreword by Gordon

MacKerron an expert on energy and nuclear policy sets this seminal work in the context of contemporary nuclear and related big technology debates

Deliberative Democracy for the Future Genevieve Fuji Johnson, 2008-06-13 In today's world public policies are increasingly associated with social and environmental risk and scientific uncertainty. Given such potential impacts on the moral freedom and equality for existing and future generations, policies should reflect decision-making standards beyond those of economic efficiency and technical safety. They should reflect the imperatives of social justice and democratic legitimacy now and into the future. *Deliberative Democracy for the Future* identifies an approach to ethical policy analysis that promises to serve the ends of justice and legitimacy in areas of public policy such as hazardous waste management, energy generation and regulation, climate change control and genomics research and commercialization. Based on a wide reading of ethical approaches to policy analysis found in contemporary political theory, moral philosophy and public policy literatures, it evaluates these three central approaches to ethical policy analysis in light of moral dilemmas arising in a particularly timely case: Canadian nuclear waste management policy. The volume's central argument is that the most desirable approach to ethical policy analysis contains the philosophical tools necessary to address problems of understanding risk and safety, identifying obligations to both existing and future generations and conceptualizing legitimacy-conferring decision-making processes. Genevieve Fuji Johnson argues that neither welfare utilitarianism nor modern deontology is sufficiently equipped for these tasks. She proposes that only deliberative democracy contains convincing conceptions of the good, justice and legitimacy that provide for the justifiable resolution of debates about the moral foundations of public policy. Responding to challenges in nuclear waste management in ways more comprehensive and more tenable than both utilitarianism and deontology, deliberative policy analysis promises to be an effective approach to other cases associated with risk, uncertainty and futurity.

Understanding Trust in Government Scott E. Robinson, James W. Stoutenborough, Arnold Vedlitz, 2017-04-28 Growing disenfranchisement with political institutions and policy processes has generated interest in trust in government. For the most part, research has focused on trust in government as a general attitude covering all political institutions. In this book, Scott E. Robinson, James W. Stoutenborough and Arnold Vedlitz argue that individual agencies develop specific reputations that may contrast with the more general attitudes towards government as a whole. Grounded in a treatment of trust as a relationship between two actors and taking the Environmental Protection Agency as their subject, the authors illustrate that the agency's reputation is explained through general demographic and ideological factors as well as policy domain factors like environmentalism. The book presents results from two approaches to assessing trust: 1. a traditional attitudinal survey approach and 2. an experimental approach using the context of hydraulic fracturing. While the traditional attitudinal survey approach provides traditional answers to what drives trust in the EPA, the experimental results reveal that there is little specific trust in the EPA across the United States. Robinson, Stoutenborough and Vedlitz expertly point the way forward for more reliable assessments of trust while demonstrating the importance of assessing trust at the agency level. This

book represents a much needed resource for those studying both theory and methods in Public Administration and Public Policy Governance of Radioactive Waste, Special Waste and Carbon Storage Thomas Flüeler, 2023-04-05 This book demonstrates that the long term safety of nuclear waste repositories special waste disposal and carbon storage CCS is highly challenging and monitoring may contribute to substantiate evidence support decision making and legitimise the programme Deep geological disposal is a long term safety issue and in parallel requires long term institutional involvement of the technoscientific community waste producers public administrators NGOs and the public What where and when to monitor is determined by its goal setting It may be operational confirmatory in the near field or environmental far field Strategic monitoring as proposed here contributes to process implementation or policy and institutional surveillance It not only addresses the controversial long lasting problem of nuclear other toxic or CO2 waste but investigates some ways to approach for solutions or solution spaces not just technical but also institutional societal and personal It includes the tailored transfer of knowledge concept and system understanding experience and documentation to specific audiences above It is an integrative tool of targeted yet adaptive management and may be applicable to other long term sociotechnical fields **Risk and the Control of Technology** Alan Irwin, 1985 **Issues in Medical Law and Ethics** Derek Morgan, 2012-12-06 Thirty years ago English jurist Patrick Devlin wrote Is it not a pleasant tribute to the medical profession that by and large it has been able to manage its relations with its patients without the aid of lawyers and law makers Medical interventions at the beginnings and the endings of life have rendered that assessment dated if not defeated This book picks up some of the most important of those developments and reflects on the legal and social consequences of this metamorphosis over the past ten years and will be of interest to students of law sociology and ethics who want a considered and critical introduction to and reflection on key issues in these pivotal moments of human life
