Society and Its Environment Egbert Tellegen, Maarten Wolsink, 2014-01-02 First Published in 1998 People cannot live without changing nature They do so by breathing feeding and defecating by dressing and heating and by creating barriers against wind and water cold and heat These forms of human induced change of nature have been present since the dawn of mankind People are constantly confronted by a malignant nature against which they have to defend themselves and whose resources they have to use in order to survive However the relationship between man and nature has dramatically changed during the past centuries More than the word nature the term environment has become strongly associated with damage and decay caused by human beings Hence in practice environment is mostly associated with problems In this book the term environment does not describe different environments and the way they are changed by human activities in general but focuses on those human induced of it What are the causes of these changes when and where are these changes considered as environmental problems and how do people react to these changes are the main questions of this book One of the possible reactions to environmental problems is the efforts to solve them The ways in which individual citizens private enterprises public authorities environmental organizations and others try to solve environmental problems is a main topic of this book

Environmental Literacy in Science and Society
 Roland W. Scholz, Claudia R. Binder, 2011-07-21 In an era where humans affect virtually all of the earth's processes questions arise about whether we have sufficient knowledge of human environment interactions How can we sustain the Earth's ecosystems to prevent collapses and what roles should practitioners and scientists play in this process These are the issues central to the concept of environmental literacy This unique book provides a comprehensive review and analysis of environmental literacy within the context of environmental science and sustainable development Approaching the topic from multiple perspectives it explores the development of human understanding of the environment and human environment interactions in the fields of biology psychology sociology economics and industrial ecology The discussion emphasises the importance of knowledge integration and transdisciplinary processes as key strategies for understanding complex human environment systems HES In addition the author defines the HES framework as a template for investigating sustainably coupled human environment systems in the 21st century

Sustainable Built Environment for People and Society
 ,2025-07-30 The pursuit of sustainable built environments has become a strategic global priority in addressing the complex interplay of social economic environmental and human development challenges outlined in the United Nations Sustainable Development Goals SDGs Accelerating urbanization climate risks and widening inequality are placing unprecedented strain on cities and communities demanding a fundamental shift in how we design deliver and manage the built environment

Sustainable built environments are central to achieving key Sustainable Development Goals SDGs particularly SDG 11 Sustainable Cities and Communities SDG 3 Good Health and Wellbeing SDG 7 Affordable and Clean Energy and SDG 13 Climate Action Built infrastructure must minimize environmental impact maximize energy efficiency and enhance the quality of life while placing people at the center ensuring inclusivity resilience and adaptability to future needs A leading example of this approach is the Zero Energy Mass Custom Home ZEMCH initiative ZEMCH promotes the delivery of affordable high performance housing that meets both individual and community needs By combining mass customization with energy efficient design and renewable energy technologies ZEMCH homes aim to achieve net zero energy consumption reduce their carbon footprint and enhance occupant wellbeing Equity and accessibility must also be embedded in the built environment ensuring that all individuals regardless of income age or ability can access safe functional and dignified spaces Ultimately sustainable development is not only about constructing greener buildings but also about shaping environments that foster social cohesion environmental stewardship and long term wellbeing Achieving this requires cross sector collaboration meaningful community engagement and the integration of sustainability principles throughout the entire lifecycle of the built environment transforming it into a catalyst for positive change for both people and society

Barr, 2016-04-29 *Environment and Society* explores ways to promote the behavioural shifts necessary for creating a sustainable society Through a critical approach to the links between sustainability policy and citizen engagement the book argues that sustainability policy needs to move towards a positive perspective utilizing the well known techniques of segmentation and social marketing Such mainstreaming of sustainable lifestyles is likely to be the only effective means of engaging the majority of citizens in the environmental debate given the major influence of the consumer society on individual aspirations and beliefs Comprised of three substantive elements *Environment and Society* explores the context for behaviour change policy the approaches adopted by politicians and academic researchers and the application of such approaches using empirical data from two major research projects The book is richly illustrated using both theoretical and empirical data and provides an excellent companion to all researchers interested in sustainable lifestyles

Institutions, Regulatory Styles, Society and Environmental Governance in China Carlos Wing-Hung Lo, Shui-Yan Tang, 2013-08-15 During the past three decades of rapid industrial growth China has suffered from devastating environmental degradation Most scholarly and popular publications have painted a rather pessimistic picture about the worrisome trend Yet a somewhat more optimistic view has emerged in the past decade given the Chinese government's increased commitment to fighting industrial pollution

the public's increased concerns regarding the adverse effects of pollution and domestic and international civil society's increased involvement in promoting environmental protection in China. Drawing on the authors' extensive research on Guangdong Province and a few large cities in other provinces, this book provides an in-depth study on China's environmental governance and regulatory enforcement in the past two decades. Section 1 examines various institutional constraints for environmental regulation enforcement at the local level and how governance reform efforts in the past decade have contributed to the lessening of those constraints. Section 2 draws on data derived from surveys and interviews conducted in multiple cities and times; it examines the dominant regulatory enforcement styles of local environmental protection bureaus and how these styles vary across different regions and over time. Section 3 examines how various stakeholders—the general public, environmental groups, government entities, and corporations—affect the environmental governance process. Overall, the book presents a cautiously optimistic view on the evolution of environmental governance in China. While highlighting many political, institutional, social, and economic constraints, it also documents many changes that have taken place, including reform efforts from within the government administrative system, increasingly societal concerns and actions, and changing attitudes among corporate executives, potentially paving the way for more effective environmental governance in the future.

Society, Environment and Human Security in the Arctic Barents Region Kamrul Hossain, Dorothée

Cambou, 2018-05-20 The Arctic Barents Region is facing numerous pressures from a variety of sources, including the effect of environmental changes and extractive industrial developments. The threats arising out of these pressures result in human security challenges. This book analyses the formation and promotion of societal security within the context of the Arctic Barents Region. It applies the human security framework, which has increasingly gained currency at the UN level since 1994, as a tool to provide answers to many questions that face the Barents population today. The study explores human security dimensions such as environmental security, economic security, health, food, water, energy, communities, political security, and digital security in order to assess the current challenges that the Barents population experiences today or may encounter in the future. In doing so, the book develops a comprehensive analysis of vulnerabilities, challenges, and needs in the Barents Region and provides recommendations for new strategies to tackle insecurity and improve the wellbeing of both indigenous and local communities. This book will be a valuable tool for academics, policy makers, and students interested in environmental and human security, sustainable development, environmental studies, and the Arctic and Barents Region in particular.

Environment, Society and International Relations Gabriela Kütting, 2013-02-01 Written in an accessible and lively style, this ground-breaking text marries a critique of current remedies towards environmental problems to original and viable alternatives. This text adopts an eco-centric rather than a traditional environmental management perspective to focus on the key issues such as the effectiveness of international agreements in solving environmental problems, the role of the structures and constraints within which these agreements operate.
