Society for Neuroscience Abstracts Society for Neuroscience. Annual Meeting, 1995 **Face Image Analysis by Unsupervised Learning** Marian Stewart Bartlett, 2012-12-06 Face Image Analysis by Unsupervised Learning explores adaptive approaches to image analysis It draws upon principles of unsupervised learning and information theory to adapt processing to the immediate task environment In contrast to more traditional approaches to image analysis in which relevant structure is determined in advance and extracted using hand engineered techniques Face Image Analysis by Unsupervised Learning explores methods that have roots in biological vision and or learn about the image structure directly from the image ensemble Particular attention is paid to unsupervised learning techniques for encoding the statistical dependencies in the image ensemble The first part of this volume reviews unsupervised learning information theory independent component analysis and their relation to biological vision Next a face image representation using independent component analysis ICA is developed which is an unsupervised learning technique based on optimal information transfer between neurons The ICA representation is compared to a number of other face representations including eigenfaces and Gabor wavelets on tasks of identity recognition and expression analysis Finally methods for learning features that are robust to changes in viewpoint and lighting are presented These studies provide evidence that encoding input dependencies through unsupervised learning is an effective strategy for face recognition Face Image Analysis by Unsupervised Learning is suitable as a secondary text for a graduate level course and as a reference for researchers and practitioners in industry **Abstracts - Society for Neuroscience** Society for Neuroscience, 1995 Consists of abstracts of papers presented at the 7th annual meeting of the Society for Neuroscience **Catalog of Copyright Entries.
