Explorations in Linguistic Relativity Martin Pütz, Marjolyn Verspoor, 2000 About a century after the year Benjamin Lee Whorf 1897 1941 was born his theory complex is still the object of keen interest to linguists Recently scholars have argued that it was not his theory complex itself but an over simplified reduced section taken out of context that has become known as the Sapir Whorf hypothesis that has met with so much resistance among linguists over the last few decades Not only did Whorf present his views much more subtly than most people would believe but he also dealt with a great number of other issues in his work Taking Whorf s own notion of linguistic relativity as a starting point this volume explores the relation between language mind and experience through its historical development Whorf s own writing its misinterpretations various theoretical and methodological issues and a closer look at a few specific issues in his work

fact that one would contemplate publication of a book such as this indicates both the maturity and the growth of activity that have taken place in the field of psycholinguistics over the past few decades. More over the fact that psycholinguists and or scholars of the history of ideas are interested in the history of their subject clearly demonstrates that much has been accomplished and the time is indeed ripe for the reassessment of whence we have come. In addition perhaps this interest in our historical past suggests that psycholinguistics is at a critical stage in its development. There are many scholars who believe that this critical stage manifests itself primarily in a search for a new paradigm. It would seem only reasonable to suggest that when members of a profession are searching for something new more than likely they will take time to reflect on the past in the hope that it will facilitate the fulfillment of their quest. This book as such reflects a wide ranging search for historical roots over a millenium of research in the psychology of language and thought. Furthermore it also reflects an attempt to open the context by introducing the broader perspectives of the history of ideas and the history of science together with their reassessment of the method of science motivated from within psychology itself.

Frequency and the Emergence of Linguistic Structure Joan L. Bybee, Paul J. Hopper, 2001-10-15. A mainstay of functional linguistics has been the claim that linguistic elements and patterns that are frequently used in discourse become conventionalized as grammar. This book addresses the two issues that are basic to this claim: first the question of what types of elements are frequently used in discourse and second the question of how frequency of use affects cognitive representations. Reporting on evidence from natural conversation, diachronic change, variability, child language acquisition and psycholinguistic experimentation, the original articles in this book support two major principles. First the content of people's interactions consists of a preponderance of subjective evaluative statements dominated by the use of pronouns, copulas and intransitive clauses. Second the frequency with which certain items and strings of items are used has a profound influence on the way language is broken up into chunks in memory storage, the way such chunks are related to other stored material and the ease with which they are accessed to produce new utterances.

The Reality of Linguistic Rules Susan D. Lima, Roberta Corrigan, Gregory K. Iverson, 1994. This volume presents a selection of the best papers from the 21st Annual University of Wisconsin-Milwaukee Linguistics Symposium. Researchers from linguistics, psychology, computer science and philosophy using many different methods and focusing on many different facts of language addressed the question of the existence of linguistic rules. Are such rules best seen as convenient tools for the description of languages or are rules actually invoked by individual language users? Perhaps the most serious challenge to date to the linguistic rule is the development of connectionist architecture. Indeed these systems must be viewed as a serious challenge to the foundations of all of

contemporary linguistics Four broad themes emerged from the Milwaukee conference corresponding to the four parts of the volume Part I centers on arguments for the existence of symbolic rules in linguistic competence and performance Part II contains arguments against symbolic rules presenting connectionist models and other alternatives to the symbolic paradigm Parts III and IV take up two issues that are central to a number of language researchers Language acquisition and learnability and modularity These issues are addressed from within both rule based and non rule based perspectives Contributors Farrell Ackerman Michael Barlow Catherine Best David Corina Roberta Corrigan Kim Daugherty Bruce Derwing Jeff Elman Alice Faber John Goldsmith Helen Goodluck Neil Jacobs Richard Janda Brian Joseph Michael Kac Alan Kawamoto Suzanne Kemmer Susan Lima Brian MacWhinney Steven Pinker Alan Prince Gerald Sanders Hinrich Schutze Mark Seidenberg Royal Skousen Nicholas Sobin Joseph Stemberger Gregory Stone Ann Thyme Robert Van Valin
