Duplex Stainless Steels Iris Alvarez-Armas, Suzanne Degallaix-Moreuil, 2013-01-16 Duplex Stainless Steels DSSs are chromium nickel molybdenum iron alloys that are usually in proportions optimized for equalizing the volume fractions of austenite and ferrite Due to their ferritic austenitic microstructure they possess a higher mechanical strength and a better corrosion resistance than standard austenitic steels This type of steel is now increasing its application and market field due

to its very good properties and relatively low cost This book is a review of the most recent progress achieved in the last 10 years on microstructure corrosion resistance and mechanical strength properties as well as applications due to the development of new grades Special attention will be given to fatigue and fracture behavior and to proposed models to account for mechanical behavior Each subject will be developed in chapters written by experts recognized around the international industrial and scientific communities The use of duplex stainless steels has grown rapidly in the last 10 years particularly in the oil and gas industry chemical tankers pulp and paper as well as the chemical industry In all these examples topics like welding corrosion resistance and mechanical strength properties mainly in the fatigue domain are crucial Therefore the update of welding and corrosion properties and the introduction of topics like texture effects fatigue and fracture strength properties and mechanical behavior modeling give this book specific focus and character

Narratives of Loneliness Olivia Sagan, Eric Miller, 2017-09-28 Rising life expectancies and declining social capital in the developed world mean that an increasing number of people are likely to experience some form of loneliness in their lifetimes than ever before *Narratives of Loneliness* tackles some of the most pressing issues related to loneliness showing that whilst recent policies on social integration community building and volunteering may go some way to giving an illusion of not being alone ultimately they offer a rhetoric of togetherness that may be more seductive than ameliorative as the condition and experience of loneliness is far more complex than commonly perceived Containing thought provoking contributions from researchers and commentators in several countries this important work challenges us to rethink some of the burning issues of our day with specific reference to the causes and consequences of loneliness Topics include the loneliness and mental health of military personnel loneliness and social media loneliness and sexuality urban loneliness and the experiences of transnational movement and adopted children This book therefore makes an overdue multidisciplinary contribution to the emerging debate about how best to deal with loneliness in a world that combines greater and faster connectedness on the one hand with more intensely experienced isolation on the other Since mile Durkheim first claimed that the structure of society could have a strong bearing on psychological health in the 1890s researchers in a range of disciplines have explored the probable impact of social context on mental health and wellbeing Interdisciplinary in approach *Narratives of Loneliness* will therefore be of great interest to academics postgraduate students and researchers in social sciences the arts psychology and psychiatry
