

Важнейшим из этапов формирования геологической истории Земли является формирование и развитие земной коры. В настоящее время накоплено много фактов, свидетельствующих о том, что в ранние периоды истории Земли существовали обширные области, занятые жидкой магмой. В процессе остывания и кристаллизации магмы происходило образование различных пород, в том числе и кристаллических пород. Эти породы, в свою очередь, подвергались различным процессам, таким как метаморфизм, что приводило к образованию новых пород. Таким образом, формирование земной коры — это длительный и сложный процесс, который продолжается и по сей день.
