Methodology, Theory, and Knowledge in the Managerial and Organizational Sciences Eliezer Geisler, 1999-06-30 Geisler argues that the over reliance on co variation techniques and statistical methods instead of process approach and in depth analysis produces meaningless knowledge in the managerial and organizational sciences and indeed throughout all the social sciences He offers instead a new and different approach based on the notion of what he calls dynamic morphologies an architecture of slicing complex phenomena This way it is possible to explain many inconsistencies in research findings and to find a cohesive systematic outlook on research research design and knowledge creation Intellectually challenging and following in the footsteps of Kuhn Argyris and Popper Geisler s approach is frankly revolutionary in research design and contains its own notions terms and nomenclature A provocative discussion for academics and others well trained in the organizational managerial and social sciences Geisler s dynamic morphologies provide a means to research complex phenomena and gain knowledge about them They are composed of a chain of events combined logically and temporally and a method by which this process is studied Geisler also contends that knowledge in the

organizational and managerial sciences is only viable when it describes and explains the complex higher order phenomena. Therefore theory building and research in these fields must be linked to higher order constructs and the phenomena that they attempt to explain. This is the central notion of amplitude that Geisler introduces and describes. His book also criticizes the evolutionary epistemology view of knowledge creation and contends that knowledge in all of these fields of study in general is not evolutionary but instead cumulative and expansive.
