The Individual Vs. The Public Interest Richard M. Alston, 2019-07-11 Central to the controversy surrounding U S natural resources policy is the conflict between environmentalists and proponents of development Examining the evolution of the philosophies underlying that conflict Dr Alston traces the failure to achieve a unified resources policy to the seemingly incompatible ideological positions held by resource specialists interest groups policymakers economists and foresters His analysis goes beyond his case study of national forest policy to focus on an ancient question basic to policy making in a democratic society How can government provide a sociopolitical framework that accommodates both individual interests and the need for unity in a collective existence Only within this broader framework he argues is it possible to determine the proper division between private and public resource management or the proper role of government in natural resources planning Incorporating a critical evaluation of the development of classical and neoclassical economic theory this work makes clear the need to strike a balance between a strictly individualistic and an ecological point of view Dr Alston illustrates the ideological conflicts that

complicate resources planning and explores the possibility of a new ideology capable of accommodating and integrating differences to meet the complex needs of society *Ricardo and the Theory of Value Distribution and Growth* Giovanni A. Caravale, Domenico A. Tosato, 2013-04-15 The book presents a rigorous reconstruction of Ricardo's contribution to economic theory and a unifying interpretation of the key issues of Ricardo's research Part One deals primarily with the problems of value and distribution Part Two deals specifically with the issues of distribution and growth Contemporary economic literature in the fields of value distribution and growth is witnessing a renewed interest in the approach of the classical school notably in the work of David Ricardo **Canonizing Economic Theory** Christopher D. Mackie, 2016-07-11

Historians of economic thought traditionally summarize critique and trace the development of existing theory History of thought literature provides information about the authors chronology and relative importance of influential works Generally missing from the literature however are answers to questions about why economic theory exists in its current form Why have economists chosen the theories they have to represent the discipline's formal content What are the criteria that determine the value of a theory or of research in general and how have these criteria changed over time In this insightful and well written work Christopher Mackie analyzes how ideas and theories are accepted in economics from the pre publication phase to the point at which once written a theory enters the accepted body of professional literature Drawing from economics the history of science and philosophy Mackie shows how both empirical and non empirical criteria determine how theory will actually evolve *Handbook of the History of Economic Thought* Jürgen Backhaus, 2011-11-12 This reader in the history of economic thought challenges the assumption that today's prevailing economic theories are always the most appropriate ones As Leland Yeager has pointed out unlike the scientists of the natural sciences economists provide their ideas largely to politicians and political appointees who have rather different incentives that might prevent them from choosing the best economic theory In this book the life and work of each of the founders of economics is examined by the best available expert on that founding figure These contributors present rather novel and certainly not mainstream interpretations of the founders of modern economics The primary theme concerns the development of economic thought as this emerged in the various continental traditions including the Islamic tradition These continental traditions differed substantially both substantively and methodologically from the Anglo Saxon orientation that has been dominant in the last century for example in the study of public finance or the very construct of the state itself This book maps the various channels of continental economics particularly from the late 18th through the early 20th centuries explaining and demonstrating the underlying unity amid the surface diversity In particular the book emphasizes the writings of John Stuart Mill his predecessor David Ricardo and his follower Jeremy Bentham the theory of Marginalism by von Thünen Cournot and Gossen the legacy of Karl Marx the innovations in developmental economics by Friedrich List the economic and monetary contributions and struggle of escape by John Maynard Keynes the formidable theory in public finance and economics by Joseph Schumpeter a reinterpretation of

Alfred Marshall L on Walras Heinrich von Stackelberg Knut Wicksell Werner Sombart and Friedrich August von Hayek are each dealt with in their own right **David Ricardo** John Cunningham Wood, 1991
