Measurement in the Social Sciences Hubert M. Blalock, 2017-09-08

Among the frustrations constantly confronting the social scientist are those associated with the general process of measurement. The importance of good measurement has long been recognized in principle but it has often been neglected in practice in many of the social sciences. Now that the methodological tools of multivariate analysis, simultaneous equation estimation and causal modeling are diffused more widely into the social sciences and now that the very serious implications of random and non random measurement errors are being systematically investigated it is all the more important that social scientists give top priority to the quality of their data and the clarity of their theoretical conceptualizations. The book is organized so that one proceeds from problems of data collection to those of data analysis. It is not intended to be a complete work covering all types of measurement problems that have arisen in the social sciences. Instead it represents a series of studies that are deemed to be crucial for the advancement of social science research but which have not received sufficient attention in most of the social sciences. The basic purpose is to stimulate further methodological research on measurement and to study the ways in which knowledge that has been accumulated in some fields may be generalized. Part I is concerned with applying scaling approaches developed in psychometrics to problems that arise in other social sciences. The focus is on finding better ways to ask questions of respondents so as to raise the level of measurement above that of simple ordinal scales. Part II focuses on multiple indicator theory and strategies as applied to relatively complex models and to change data. In this section the emphasis shifts to how one analyzes fallible data through the construction of explicit measurement error models. Part III deals with the statistical analysis of ordinal data including the interpretation and empirical behaviors of various ordinal measures of association.

Measurements in the Social Sciences Hubert M. Blalock, 1974. Among the frustrations constantly confronting the social scientist are those associated with the general process of measurement. The importance of good measurement has long been recognized in principle but it has often been neglected in practice in many of the social sciences. Now that the methodological tools of multivariate analysis, simultaneous equation estimation and causal modeling are diffused more widely into the social sciences and now that the very serious implications of random and non random measurement errors are being systematically investigated it is all the more important that social scientists give top priority to the quality of their data and the clarity of their theoretical conceptualizations as well as to methods for analyzing fallible data. This book deals with selected problems of measurement and is written for graduate students and professional social scientists particularly in the technically less developed fields of sociology, political science and anthropology. The book is organized so that in general one proceeds from problems of data collection to those of data analysis. It is not intended to be a complete work covering all types of measurement problems that have arisen in the social sciences. Instead it represents a

series of studies of topics that are deemed to be crucial for the advancement of social science research but which have not received sufficient attention in most of the social sciences The basic purpose is to stimulate further methodological research on measurement and to study the ways in which knowledge that has been accumulated in some fields may be generalized so that it may be applied to others The book is divided into three major parts Part I is concerned with applying scaling approaches developed in psychometrics to problems that arise in other social sciences The focus is on finding better ways to ask questions of respondents so as to raise the level of measurement above that of simple ordinal scales Part II focuses on multiple indicator theory and strategies as applied to relatively complex models and to change data In this section the emphasis shifts to how one analyzes fallible data through the construction of explicit measurement error models Part III deals with the statistical analysis of ordinal data including the interpretation and empirical behaviors of various ordinal measures of association The final chapter written by the editor discusses how ordered metric assumptions may be used to make more powerful predictions than those characterizing much of contemporary social science H M Blalock Jr 1926 1991 was Professor Department of Sociology the University of Washington Seattle He was recipient of the 1973 ASA Samuel Stouffer Prize and was a Fellow of the American Statistical Association and the American Academy of Arts and Sciences and is a member of the National Academy of Sciences He was the 70th president of the American Sociological Association

Sociological Methods & Research, 1987 **Measurement in the Social Sciences** Richard A. Zeller, Edward G. Carmines, 1980-04-30 This textbook is designed to bridge the gap between the theorist and the methodologist by presenting an integrated approach to measurement By differentiating between random and systematic error it conveys both statistical techniques and their theoretical underpinnings essential to students of sociology and political science Rather than developing new technical methods of new theoretical structures Professors Zeller and Carmines provide thorough explanations of the assumptions limitations and interpretations of previously established techniques and theories Written at a level accessible to students of social science with some statistical training the book does not presume a sophisticated mathematical background By concentrating on synthesizing the methodological and theoretical realms Zeller and Carmines demonstrate why measurement considerations are important to research and how measurement principles can be most effectively applied

Data Resources of the National Institute of Justice, 1995 *Data Resources of the National Institute of Justice* National Institute of Justice (U.S.), 1992 *Causal Models in Experimental Designs* Hubert M. Blalock, 2017 This is a companion volume to the *Causal Models in the Social Sciences* the majority of articles concern panel designs involving repeated measurements while a smaller cluster involves discussions of how experimental designs may be improved by more explicit attention to causal models All of the papers are concerned with complications that may occur in actual research designs as compared with idealized ones that often become the basis of textbook discussions of design issues In thinking about the revision of that volume considerable literature has accumulated As a result this volume attempts to bridge the gap in time

and substance to that earlier effort Blalock examined articles that seemed to hold the most promise of expanding the variety of topics in research methods to the causal modeling approach and addressing the design issues involved The majority of these fell under the heading of panel designs involving repeated measurements a smaller cluster involved discussions of how our understanding of experimental designs could be improved by paying explicit attention to causal models Blalock presented five chapters bearing on experimental designs into Part I since the issues with which they deal are more general than those that treat more specifically with the handling of change data Although many readers may have more immediate interest in these latter papers which appear in Part II Blalock thought it wise to encourage such readers to examine broader issues before plunging specifically into discussions of panel designs H M Blalock Jr 1926 1991 was professor of sociology at the University of Washington Seattle He was recipient of the 1973 ASA Samuel Stouffer Prize and was a Fellow of the American Statistical Association and the American Academy of Arts and Sciences and is a member of the National Academy of Sciences He was the 70th president of the American Sociological Association *Children Of The Great Depression* Glen H Elder,2018-10-08 In this highly acclaimed work first published in 1974 Glen H Elder Jr presents the first longitudinal study of a Depression cohort He follows 167 individuals born in 1920 1921 from their elementary school days in Oakland California through the 1960s Using a combined historical social and psychological approach Elder assesses the influence of the economic crisis on the life course of his subjects over two generations The twenty fifth anniversary edition of this classic study includes a new chapter on the war years entitled Beyond Children of the Great Depression
