The Gene Age Edward J. Sylvester, Lynn C. Klotz, 1983      **The Gene Hunters** Calestous Juma, 2014-07-14 The world is on the verge of receiving new life forms that will profoundly and irrevocably change the global economy the gene hunters who first cloned the gene in 1973 are now not only modifying existing species but also creating new plants and animals Ready or not for such awesome power the human race has put itself in a position to govern evolution What will we do with the abilities we now command asks this broad and stimulating book on the role of plant material in economic development Writing in a style that is easily understandable even to those with no background in biotechnology Calestous Juma begins by showing how the importation of plants strengthened the British Empire and brought the United States to global agricultural superiority He goes on to explore the current international competition for genetic material and the potential impact of biotechnology on the relationship of the developed and developing world Juma points out that biotechnology poses real dangers to the third world Often one of the few exportable resources that a developing country possesses is an unusual or rare crop but biotechnological techniques make possible the cultivation of many such crops outside their natural habitats potentially eliminating the need to import the crops from the countries in which they grow indigenously After discussing the threat of biotechnology Juma comes full circle and points out that it does not have to be a threat Actually tremendous benefits could accrue to the third world from biotechnology if and only if that new technology is adapted to its needs Originally published in 1989 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905      The Cybernetic Revolution and the Forthcoming Epoch of Self-Regulating Systems Grinin, Leonid, Grinin, Anton L., 2016-01-01 The monograph presents the ideas about the main changes that occurred in the development of technologies from the emergence of Homo sapiens till present time and outlines the prospects of their development in the next 30 60 years and in some respect until the end of the twenty first century What determines the transition of a society from one level of development to another One of the most fundamental causes is the global technological transformations Among all major technological breakthroughs in history the most important are three production revolutions 1 the Agrarian Revolution 2 the Industrial Revolution and 3 the Cybernetic one The book introduces the theory of production revolutions which is a new valuable explanatory paradigm that analyzes causes and trends of dramatic shifts in historical process The authors describe the course of technological transformations in history and demonstrate a possible application of the theory to explain the present and forthcoming technological changes They analyze the technological shifts which took place in the second half of the twentieth and early twenty first centuries and

forecast the main shifts in the next half a century On this basis the authors present a detailed analysis of the latest production revolution which is denoted as cybernetic They make some predictions about its development in the nearest five decades and up to the end of the twenty first century and show that the development of various self regulating systems will be the main trend of this revolution The authors argue that the transition to the starting final phase of the Cybernetic Revolution in the 2030 2040s will first occur in the field of medicine in some of its innovative branches In future we will deal with the started convergence of innovative technologies which will form the system of MANBRIC technologies i e the technological paradigm based on medicine additive nano and bio technologies robotics IT and cognitive technologies The monograph gives an outline of the future breakthroughs in medicine and some other technologies between the 2010s and 2070s

**Biotechnology and Genetic Engineering** Facts On File, Incorporated, 2008 Provides an overview chronology of events glossary and annotated bibliography on biotechnology and genetic engineering *Evolution: Development within Big History, Evolutionary and World-System Paradigms* Leonid E. Grinin, Andrey V. Korotayev, 2013-09-30 The application of the evolutionary approach to the history of nature and society has remained one of the most effective ways to conceptualize and integrate our growing knowledge of the Universe life society and human thought The present volume demonstrates this in a rather convincing way This is the third issue of the Almanac series titled Evolution The first volume came out with the sub heading Cosmic Biological and Social the second was entitled Evolution A Big History Perspective The present volume is subtitled Development within Big History Evolutionary and World System Paradigms In addition to the straightforward evolutionary approach it also reflects such adjacent approaches as Big History the world system analysis as well as globalization paradigm and long wave theory The volume includes a number of the exciting works in these fields The Almanac consists of five sections The first section Globalization as an Evolutionary Process Yesterday and Today contains articles demonstrating that the Evolutionary studies is capable of creating a common platform for the world system approach globalization studies and the economic long wave theory The articles of the second section Society Energy and Future discuss the role of energy in the universal evolution human history and the future of humankind The third section Aspects of Social Development touches upon four aspects of social evolution technological environmental cultural and political The fourth section The Driving Forces and Patterns of Evolution deals with various phases of megaevolution There is also a final section which is devoted to discussions of contemporary evolutionism This Almanac will be useful both for those who study interdisciplinary macroproblems and for specialists working in focused directions as well as for those who are interested in evolutionary issues of Cosmology Biology History Anthropology Economics and other areas of study More than that this edition will challenge and excite your vision of your own life and the new discoveries going on around us *The Natural and the Artefactual* Keekok Lee, 1999-01-01 In this book philosopher Keekok Lee challenges one of the central assumptions of contemporary environmentalism that if we could reduce or eliminate pollution we could save the planet without unduly

disrupting our modern industrialized societies Lee argues instead that the process of modernization with its attendant emphasis on technological innovation has fundamentally transformed nature into just another manmade artefact Ultimately what needs to be determined is if nature has value above and beyond human considerations whether aesthetic spiritual or biological This provocative book attempts to reconfigure environmental ethics positing the existence of two separate ontological categories the natural and the artefactual Natural entities be they organisms or inert matter are morally considerable because they possess the ontological value of independence whereas artefacts are created by humans expressly to serve their own interests and ends      *Cybernetic Revolution and Global Aging* Leonid Grinin,Anton Grinin,Andrey Korotayev,2024-05-17 This book explores the global technological transformations that have shaped development of society for eons from the emergence of Homo sapiens to the modern day Looking at a potential future for all of this century and the beginning of the next the book explores how society is changing as a result of the two most powerful trends technological advances and global aging It studies the forthcoming technological wave the Cybernetic Revolution which will encompass AI medical technology and biotechnology robotics cognitive nanotechnology etc In turn it shows why and how global aging will become one of the most powerful factors influencing the evolution of society and the World System as a whole Lastly the book demonstrates how technological innovations can change the way people live and the society of the future assessing both the new opportunities and threats posed by uncontrolled technological progress Accordingly it will appeal to social scientists political scientists economists and historians who are interested in technological transformations and their social and economic impacts      *The Gene Age* Edward J. **Globalistics and Globalization Studies: Theories, Research & Teaching** Leonid Grinin,Ilya Ilyin,Andrey Korotayev,2013-09-30 This is the second issue of the new series titled Globalistics and Globalization Studies Globalistics may be regarded as a sort of systemic and more or less integrated core within Global Studies At present Global Studies function in two main dimensions in the research of global political economic cultural and social processes on the one hand and in the realm of teaching manifesting themselves in the creation of various Global Studies programs and courses for university students who learn to see the world in its entirety and variety The second dimension is immensely important as the contents of such programs and courses may determine how the world will be comprehended by those people who may decide its fate in a decade or two This dualistic nature of Global Studies has determined the general direction of our anthology that comprises both the theoretical dimension of Global Studies and their application to the teaching process The anthology consists of three parts presenting a wide range of views on the meaning of the contemporary epoch the past and the future of some important global processes as well as the problems and successes in the teaching process of Global Studies Part 1 Globalization in Historical Retrospective Part 2 Globalistics Global Studies and Global Processes Part 3 Teaching Global Studies In the present anthology one can find perceptions of globalization by a number of famous scholars from different

countries of the world Ervin Laszlo Christopher Chase Dunn and others but one can also get to know rather peculiar visions of globalization by Russian scientists and educators

**Biological Defense Research Program** ,1989 *The Great Boom 1950-2000* Robert Sobel,2016-02-09 In *The Great Boom* historian Robert Sobel tells the fascinating story of the last 50 years when American entrepreneurs visionaries and ordinary citizens transformed our depression and war exhausted society into today s economic powerhouse As America s G I s returned home from World War II many of the nation s best minds predicted a new depression yet exactly the opposite occurred Jobs were plentiful in retooled factories swamped with orders from pent up demand Tens of thousands of families moved out of cities into affordable suburban homes built by William Levitt and his imitators They bought cars televisions and air conditioners by the millions And they took to the nation s roads and new interstate highways the largest public works project in world history where Kemmons Wilson of Holiday Inns Ray Kroc of McDonalds and other start up entrepreneurs soon catered to a mobile populace with food and lodgings for leisure time vacationers Americans and their families began to channel savings into new opportunities Credit cards democratized purchasing power while early mutual funds found growing numbers of investors to fuel the first postwar bull market in the go go 60s At the same time the continuing boom enriched the fabric of social and cultural life A college education became a must on the highway to upward mobility high tech industries arose with astonishing new ways of conducting business electronically and an unprecedented 49 million families had become investors when the 1981 2000 stock market boom reached 10 000 on the Dow *The Great Boom* is the first major book to portray the great wave of homegrown entrepreneurs as post war heroes in the complete remaking and revitalizing of America All that plus the creation of unprecedented wealth or themselves for the nation for tens of millions of citizens all in five short drama filled decades

**First the Seed** Jack Ralph Kloppenburg,1990-06-29 This history of the scientific and commercial lines of plant development in the United States traces the transformation of the seed from a public good produced and reproduced by farmers into a commodity controlled by businesses and corporations divorced from the uses of their product

The Past And Future Of Law E.O. Blunsom,2013-04-10 We live in our nations but what other nations do may affect us and sometimes immensely We are all members of the world community of people living in our dangerous world The purpose of the following book is to consider the laws and practices that govern our nations and through them our world It builds on the premise that unless we change and improve our laws the human race may not survive in the future It is not about any particular nation but about all nations Many citizens believe their nations are ideal providing freedom and justice and with governments representative of the people This may be true in their minds and according to their beliefs but the dangers and sufferings of the world continue They are the concern of us all because they affect all people The world has changed vastly from the past It is technically more advanced but also more dangerous because of nuclear and other deadly weapons and widespread poverty and diseases in overgrown populations The past in spite of its myriad wars and premature deaths has survived Can our present world

using the same instruments power nations positive laws strictly enforced retaliations and harsh punishments also survive The answer may be an unequivocal no reverberating through future power wars We need a fresh outlook different laws and a new phase of global society to replace the past Legal philosophers have proclaimed many varieties of laws including eternal laws provided by God and natural laws according to human nature Most are nonenforced laws that they say Ought to be Positive laws are those that exist made and enforced by nations

**HISTORY & MATHEMATICS** Leonid Grinin, Andrey Korotayev, The present Yearbook which is the eighth in the series is subtitled Investigating Past and Future It is devoted to three problems the analysis of the aspects of past and present in the light of formal methods singularity i e forthcoming abrupt shift in development the approach or even presence of which we already feel the aspects of the cosmic future of human race This issue consists of four sections I History Technologies Politics and Mathematics includes five articles on different directions of factual or theoretical content history technology politics and studies covering past present and future II Singularity includes two contributions and is devoted to a rather interesting phenomenon of singularity They suggest that indeed the hyperbolic planetary evolutionary trend observed since the origins of life on the Earth cannot continue beyond the forthcoming singularity whereas the post singular evolutionary trend should be qualitatively different from what has been observed before III Beyond the Earth also consists of two very different articles but they are united by their interest in the future of human race in terms of their interaction with the space IV Reviews and Notes We hope that this issue will be interesting and useful both for historians and mathematicians as well as for all those dealing with various social and natural sciences

Macrohistory and Globalization Grinin, Leonid, 2012-06-01 The present monograph considers some macrohistorical trends along with the aspects of globalization Macrohistory is history on the large scale that tells the story of the entire world or of some major dimensions of historical process For the present study three aspects of macrohistory have been chosen These are technological and political aspects as well as the one of historical personality Taken together they give a definite picture of unfolding historical process which is described from the beginning of human society formation to the present day and near future The combination in the monograph title of the two terms macrohistory and globalization is in no way artificial On the contrary the connection of these terms is organic at least as the real goal of macrohistory is to find meaning in the past so as to create new possibilities of meaning for the future The analysis of globalization also includes three aspects political economic and futurological as today the world may well be regarded as being at the start of a new global reconfiguration The author presents his ideas of the world prospective political and in some respects social economic development basing on the analysis of macrohistory and contemporary globalization processes The monograph also considers some global scenarios of the World System s near future
