Genes, Brains, and Human Potential Ken

Richardson, 2017-03-21 For countless generations people have been told that their potential as humans is limited and fundamentally unequal The social order they have been assured is arranged by powers beyond their control More recently the appeal has been to biology specifically the genes brain sciences the concept of intelligence and powerful new technologies Reinforced through the authority of science and a growing belief in bio determinism the ordering of the many for the benefit of a few has become more entrenched Yet scientists are now waking up to the influence of ideology on research and its interpretation In Genes Brains and Human Potential Ken Richardson illustrates how the ideology of human intelligence has infiltrated genetics brain sciences and psychology flourishing in the vagueness of basic concepts a shallow nature versus nurture debate and the overhyped claims of reductionists He shows how ideology more than pure science has come to dominate our institutions especially education encouraging fatalism about the development of human intelligence among individuals and societies Genes Brains and Human Potential goes much further building on work being done in molecular biology epigenetics dynamical systems evolution theory and complexity theory it maps a fresh understanding of intelligence and the development of human potential Concluding with an upbeat message for human possibilities this synthesis of diverse perspectives will engender new conversations among students researchers and other interested readers

Narrative Therapy Catrina Brown, Tod Augusta-Scott, 2006-08-03 This volume is especially useful in demonstrating the effects of placing social discourses at the center of therapy. It goes against many sacred cows of the larger modernist therapeutic community but in doing so it offers new ideas for mental health professionals attempting to help their clients with common and serious life problems. **PSYCRITIQUES** This compilation is an insightful read for practitioners who have not taken the opportunity to use narrative therapy in practice. Experienced practitioners will certainly appreciate the theoretical analysis offered by the writers as well as the opportunity for reflective practice. Narrative Therapy is a meaningful contribution to a Canadian book market lacking in clinical literature for social workers. **CANADIAN ASSOCIATION OF SOCIAL WORKERS** Narrative Therapy Making Meaning Making Lives offers a comprehensive introduction to and critique of narrative therapy and its theories. This edited volume introduces students to the history and theory of narrative therapy. Authors Catrina Brown and Tod Augusta Scott situate this approach to theory and practice within the context of various feminist post modern and critical theories. Through the presentation of case studies Narrative Therapy Making Meaning Making Lives shows how this narrative oriented theory can be applied in the client therapist experience. Many important therapeutic situations abuse addictions eating disorders and more are addressed from the narrative perspective. Rooted in social constructionism and emerging initially from family therapy narrative therapy emphasizes the idea that we live storied lives. Within this approach the editors and contributors seek to show how we make sense of our lives and experiences by ascribing meaning through stories which themselves arise within social conversations and culturally available discourses. Our stories don't simply represent us or mirror lived events they actually constitute us shaping our lives as well as our relationships. Narrative Therapy will be a valuable supplemental textbook for theory and practice courses in departments of Counseling and Psychotherapy and of Social Work as well as for courses in Gender and Women Studies. *Attachment Volume 8 Number 3* Kate White, Orit Badouk Epstein, 2014-11-30 Attachment New Directions in Psychotherapy and Relational Psychoanalysis is a leading edge journal for clinicians working relationally with their clients. Read, Loren R. Mosher, Richard P. Bentall, 2004 Models of Madness shows that hallucinations and delusions are understandable reactions to life events and circumstances rather than symptoms of a supposed genetic predisposition or biological disturbance. International contributors critique the medical model of madness, examine the dominance of the illness approach to understanding madness from historical and economic perspectives, document the role of drug companies, outline the alternative to drug based solutions, identify the urgency and possibility of prevention of madness. Models of Madness promotes a more humane and effective response to treating severely distressed people that will prove essential reading for psychiatrists and clinical psychologists and of great interest to all those who work in the mental health service. This book forms part of the International Society for the Psychological Treatment of Psychoses series edited by Brian Martindale.

The Trouble with Twin Studies Jay Joseph, 2014-11-20 The Trouble with Twin Studies questions popular genetic explanations of human behavioral differences based upon the existing body of twin research. Psychologist Jay Joseph outlines the fallacies of twin studies in the context of the ongoing decades long failure to discover genes for human behavioral differences including IQ, personality and the major psychiatric disorders. This volume critically examines twin research with a special emphasis on reared apart twin studies and incorporates new and updated perspectives, analyses, arguments and evidence.

The Genius in All of Us David Shenk, 2011-03-08 Fresh insights into the nature of exceptional performance. A deeply interesting and important book. New York Times Book Review that offers a revolutionary and life changing message on the new science of human potential. Is true greatness obtainable from everyday means and everyday genes? Conventional wisdom says no; that a lucky few are simply born with certain gifts. Now you can forget everything you think you know about genes, talent and intelligence and take a look at the amazing new evidence. Here interweaving cutting edge research from numerous scientific fields, David Shenk offers a new view of human potential, giving readers more of a sense of ownership over their accomplishments and freeing parents from the bonds of genetic determinism. As Shenk points out, our genes are not a blueprint that dictate individual destinies. Rather, we are all the product of interplay between genes and outside stimuli, a dynamic that we can influence. It is a revolutionary and life changing message.
