

The God Gap reveals aspects of creation hidden by invisible forces. The author witnessed these by studying the underlying harmony of objects in time and space that manifest to create the universe. Similarly, the harmony of water, carbon-based molecules, geological formations, and meteorological changes were the building blocks for life on Earth and millions of years of succession since.

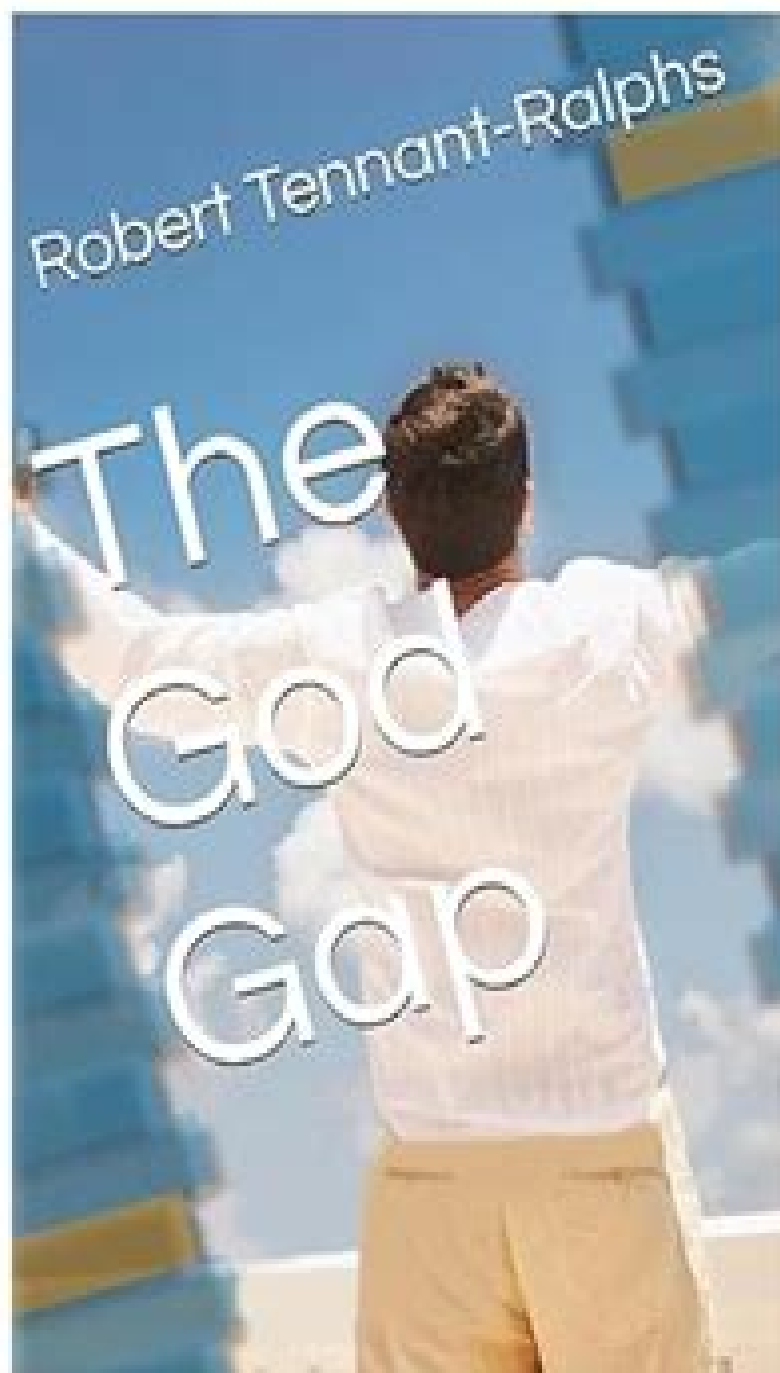

In man's early years, no one knew of the existence of the universe, its galaxies, the sun's solar system, how continents and oceans formed, the extent of life on land and in the seas, the complexities responsible for their creations, or that Earth is round. If a hominid living three million years ago met someone who told them these were facts, they would not have believed them. To humans, seeing is believing, but it is the opposite in the evolution of the universe and life.

Our realisation of these developed with time and is still limited. It does not include understanding the phenomena of how the more complex came into being nor does it explain the balance of what was needed in each instance, at every moment, to produce the results later achieved.

Thanks to new understandings, man knows these characteristics are true. But it still leaves millions of unexplained mysteries. The God Gap delves into these, and the results reveal 'fingerprints' that can only belong to a single creative source.
