The Polymers In Fuel Cells Collection:

Polymers in Fuel Cells Collection Rapra Technology,2004-02-01 This key resource contains over 300 records from the internationally renowned Polymer Library abstracts database <http://www.polymerlibrary.com> and is bursting with information and useful references for those with an interest in polymers in fuel cells. It comprises a comprehensive collection of abstracts added to the database relating to this field with full bibliographic details followed by an extensive keyword index and author/company trade name index. Fuel cells are energy efficient, low polluting electrochemical systems that could power both industry and transport in order to meet the stringent emission requirements that will come into effect in the next decade. Proton exchange membranes, a key component of fuel cells, are referred to widely in this collection. Abstracts include articles relating to properties such as ionic conductivity, humidification, operating temperatures and gas permeability. Coverage includes cases where innovative polymers suited to highly selective membrane-based gas separations are used. Almost all of the references referred to in the collection are available from our quick and efficient Document Delivery Service so you could have copyright cleared copies of original full text documents upon your desk within just a few hours. Whether you are venturing into a new project and need to be brought up to speed fast or looking for new ideas or solutions in your current work, The Polymers in Fuel Cells Collection could be just what you have been looking for.

Polymers for PEM Fuel Cells Hongting Pu,2014-09-15 Including chemical, synthetic and cross-disciplinary approaches, this book includes the necessary techniques and technologies to help readers better understand polymers for polymer electrolyte membrane (PEM) fuel cells. The methods in the book are essential to researchers and scientists in the field and will lead to further development in polymer and fuel cell technologies. Provides a complete, essential and comprehensive overview of polymer applications for PEM fuel cells. Emphasizes state-of-the-art developments and methods like PEMs for novel fuel cells and polymers for fuel cell catalysts. Includes detailed chapters on major topics like PEM for direct liquid fuel cells and fluoropolymers and non-fluorinated polymers for PEM. Has relevance to a range of industries like polymer engineering materials and green technology involved with fuel cell technologies and R D.

Polymer Electrolyte Membrane and Direct Methanol Fuel Cell Technology Christoph Hartnig, Christina Roth,2012-03-19 Polymer electrolyte membrane fuel cells (PEMFCs) and direct methanol fuel cells (DMFCs) technology are promising forms of low temperature electrochemical power conversion technologies that operate on hydrogen and methanol respectively. Featuring high electrical efficiency and low operational emissions, they have attracted intense worldwide commercialization research and development efforts. These R D efforts include a major drive towards improving materials performance, fuel cell operation and durability. In situ characterization is essential to improving performance and extending operational lifetime through providing information necessary to understand how fuel cell materials perform under operational loads. This two-volume set reviews the fundamentals, performance and in situ characterization of PEMFCs and DMFCs. Volume 1 covers the fundamental science and engineering

of these low temperature fuel cells focusing on understanding and improving performance and operation Part one reviews systems fundamentals ranging from fuels and fuel processing to the development of membrane and catalyst materials and technology and gas diffusion media and flowfields as well as life cycle aspects and modelling approaches Part two details performance issues relevant to fuel cell operation and durability such as catalyst ageing materials degradation and durability testing and goes on to review advanced transport simulation approaches degradation modelling and experimental monitoring techniques With its international team of expert contributors Polymer electrolyte membrane and direct methanol fuel cell technology Volumes 1 2 is an invaluable reference for low temperature fuel cell designers and manufacturers as well as materials science and electrochemistry researchers and academics Covers the fundamental science and engineering of polymer electrolyte membrane fuel cells PEMFCs and direct methanol fuel cells DMFCs focusing on understanding and improving performance and operation Reviews systems fundamentals ranging from fuels and fuel processing to the development of membrane and catalyst materials and technology and gas diffusion media and flowfields as well as life cycle aspects and modelling approaches Details performance issues relevant to fuel cell operation and durability such as catalyst ageing materials degradation and durability testing and reviews advanced transport simulation approaches degradation modelling and experimental monitoring techniques

Polymer Electrolyte Fuel Cells 10 Hubert Andreas Gasteiger, 2010-10 This issue of ECS Transactions reports on research development and engineering of polymer electrolyte fuel cells PEFCs as well as low temperature direct fuel cells using either anion or cation exchange membranes It discusses diagnostic techniques and systems design for both acid and alkaline fuel cells catalysts and membranes for acid fuel cells and catalysts and membranes for alkaline fuel cells

Polymer Membranes for Fuel Cells Javaid Zaidi, Takeshi Matsuura, 2010-07-15 From the late 1960 s perfluorosulfonic acid PFSA ionomers have dominated the PEM fuel cell industry as the membrane material of choice The gold standard amongst the many variations that exist today has been and to a great extent still is DuPont s Nafion family of materials However there is significant concern in the industry that these materials will not meet the cost performance and durability requirements necessary to drive commercialization in key market segments especially automotive Indeed Honda has already put fuel cell vehicles in the hands of real end users that have home grown fuel cell stack technology incorporating hydrocarbon based ionomers

Polymer Membranes in Fuel Cells takes an in depth look at the new chemistries and membrane technologies that have been developed over the years to address the concerns associated with the materials currently in use Unlike the PFSA which were originally developed for the chlor alkali industry the more recent hydrocarbon and composite materials have been developed to meet the specific requirements of PEM Fuel Cells Having said this most of the work has been based on derivatives of known polymers such as poly ether ether ketones to ensure that the critical requirement of low cost is met More aggressive operational requirements have also spurred the development on new materials for example the need for operation at higher temperature under low relative humidity has spawned the creation of

Basu, 2007-10-20 Fuel cell science and technology is evolving fast for the past two decades as it is thought to be an efficient way of transforming chemical energy of hydrogen rich compounds to electrical energy Although this idea of direct conversion of chemical energy to electrical energy was first demonstrated by Sir William Grove in 1839 using a fuel cell it was only in the middle of the twentieth century when Bacon's pioneering work led to the use of fuel cell in space missions The interest in commercialization of fuel cell for civilian use has caught up with government organizations and private corporations for the past decade on account of fluctuating oil prices and environmental concerns It is well known that the conventional fossil fuel which is a primary source of gasoline is not going to last more than a hundred years in the

face of ever increasing demand in the developed and developing countries Although the reserves of natural gas coal and tar sands may last another two to three hundred years with the current rate of production their conversion is not efficient and pollution free Thus scientists all over the world have taken up fuel cell development work in their quest of solution to the energy crises looming largely on global population This book aims to script the present status of the rapidly developing field of fuel cell science and technology
