A Journey into Time in Powers of Ten Anna Garry, Thomas Feurer, 2016-03-23 The development of science over the course of many centuries has shown that there are things in our universe which took incredibly long to form such as planets or galaxies While in contrast there are processes for example inside our body which happen so incredibly fast that they are beyond our ability to fully comprehend Using examples from different time periods or timescales we aim to give you deeper insight both visually and with text into some of the most amazing physical events cultural developments and biological processes from life These examples are brought together using three intertwined themes life light and science This book illustrates the range of timescales that play a role not only in our lives but also in the lives of all living beings on earth We start in the center of the book with examples that are familiar and then depending on the direction you read we move to faster or slower processes Each page is dedicated to one timescale and has a sequence of ten images which illustrates the shifting stages in that time period The text explains and expands what you see in the photographs and the key words give further interesting details After reading through this book it is our hope that you understand that although we experience life in seconds minutes hours days months or years there are things important to us happening a gazillion times faster than anything we are used to On the other hand there are events that take so incredibly long that a million generations of humans are not enough to witness their birth

Arithmetic for Teachers Gary R. Jensen,2003-11-25 Excellent teaching of mathematics at the elementary school level requires that the teacher be an expert in school mathematics This textbook for prospective teachers presents topics from the K 6 mathematics curriculum but at a greater depth than is usually found in the classroom The added knowledge that comes from this approach gives the teacher essential insight into how the topics interrelate and where difficulties might lie With this deeper mathematical preparation the teacher is better able to explain concepts demonstrate computational procedures and lead students through problem
