The Prehistory Of Salts Cave Kentucky Reports Of Investigations No 16:

Cave Archaeology of the Eastern Woodlands David H. Dye, 2008 Patty Jo Watson's prolific career began in the early 1950s as an energetic graduate student at the University of Chicago and culminated with her induction into the National Academy of Sciences and subsequent retirement from Washington University in 2003. During that time her groundbreaking research impacted multiple fields within the discipline of archaeology but her astonishing research into the underground caves of the eastern United States recognizes her as one of the world's leading experts on cave archaeology. In honor of Dr. Watson and her monumental achievements in the field, twenty-two established scholars present in this volume new and insightful research into prehistoric and historic use of southeastern dark zones. *Cave Archaeology of the Eastern Woodlands*, edited by David H. Dye, explores how prehistoric and historic peoples utilized caves as a means to further their economic growth and represent cultural values within their societies. The essays range in topics from early gypsum mining to rare American Indian cave art from historic saltpeter extraction to current archaeobotanical and paleofecal research. Dye and the contributors contend that studies of deep zone caves reveal multiple insights into the values, beliefs, and cultural lifeways of ancient and historic peoples. In addition to presenting new research in the field, contributors also place particular emphasis on Dr. Watson's influential cave research and how it has molded their own work. The essays convey a sense of wonder at the unique and sometimes harrowing world of caves, and readers will get a sense of why Native Americans regarded the Underworld or Beneathworld as a supernatural realm to be tread upon with great respect and caution. This volume of uniformly excellent essays will no doubt be a lantern that sheds light onto the importance of studying and understanding the all-too-secret world of underground caves. David H. Dye is professor of archaeology in the Department of Earth Sciences at the University of Memphis and a former student of Patty Jo Watson's. He is author of *Cycles of Violence: An Archaeology of Peace and War in Native Eastern North America*, coeditor with Richard J. Chacon of *The Taking and Displaying of Human Body Parts as Trophies by Amerindians*, and with Cheryl Anne Cox of *Towns and Temples Along the Mississippi*. **Rivers of Change** Bruce D. Smith, 2007-01-21 Organized into four sections, the twelve chapters of *Rivers of Change* are concerned with prehistoric Native American societies in eastern North America and their transition from a hunting and gathering way of life to a reliance on food production. Written at different times over a decade, the chapters vary both in length and topical focus. They are joined together, however, by a number of shared rivers of change. **Advances in Archaeological Method and Theory** Michael B. Schiffer, 2014-06-30 *Advances in Archaeological Method and Theory* Volume 9 is a collection of papers that describes protohuman culture, pastoralism, artifact classification, and the use of materials science techniques to study the construction of pottery. Some papers discuss contingency tables, geophysical methods of archaeological site surveying, and predictive models for archaeological resource location. One paper reviews the methodological and theoretical advances in the archaeological studies of human origins, particularly covering the Plio-Pleistocene period. Another paper explains the historic

and prehistoric development of pastoralism through archaeological investigation One paper traces the three phases of artifact classification each being a representation of a different attitude and approach Another paper evaluates pottery artifacts using a number of basic materials science concepts and analytic approaches toward the study of their mechanical strength and also reviews their use in archaeological studies of pottery production and organization To investigate archaeological intrasites the archaeologist can use different specialized methods such as seismic electromagnetic resistivity magnetometry and radar Another paper describes various empiric correlative models for locational prediction developed in both contexts of cultural resource management and academic research Sociologists anthropologist ethnographers museum curators professional or amateur archaeologists will find the collection immensely valuable *Holocene Hunter-Gatherers of the Lower Ohio River Valley* Richard Jefferies, 2008 Holocene Hunter Gatherers of the Lower Ohio River Valley addresses the approximately 7 000 years of the prehistory of eastern North America termed the Archaic Period by archaeologists

The Longest Cave Roger W. Brucker, Richard A. Watson, 1987-02-16 The dramatic story of several generations of cavers whose exciting and dangerous explorations in Kentucky's limestone labyrinths culminated in the big connection between the Flint Ridge Cave System and Mammoth Cave forming the longest cave in the world **Topics in Dietary Fiber Research**

Gene Spiller, 2012-12-06 The study of plant fibers and their effect on human physiology has suddenly after many years of comparative obscurity been catapulted to the forefront of the scientific world This new interest first ignited by certain epidemiological reports has been intensified by new research and by dramatization in the lay press To counteract the dissemination of inaccurate information and to eliminate confusion several authors have felt the need to make objective unbiased reports available to the scientific community The collection of papers in our own *Fiber in Human Nutrition* Plenum Press 1976 is one such effort However even as it was going to press we realized that increased interest in specific areas of fiber research necessitated a more detailed and up to date look at certain topics This book is directed to that purpose The first volume of *Fiber in Human Nutrition* was designed as a basic reference textbook covering the entire spectrum of plant fibers from chemical analytical physico chemical physiological medical and epidemiological points of view The present volume which enlarges on specific aspects of dietary fiber is offered as a supplement to *Fiber in Human Nutrition* Together the two volumes should be a most valuable source of information for the student of the scientific intricacies of fiber An ongoing concern is that many of the substances dealt with in these and other fiber books are not in the classical sense of a fibrous nature at all **The Dead Tell Tales** Maria Cecilia Lozada, Barra O'Donnabhain, 2013-12-31 Honoring Jane Buikstra's pioneering work in the development of bioarchaeological research the essays in this volume stem from a symposium held at the annual meeting of the Society for American Archaeology Multiple generations of Buikstra's former doctoral students and other colleagues gathered to discuss the impact of her mentorship The essays are remarkable for their breadth in terms of

both the topics discussed and the geographical range they cover The contributions highlight the dynamism of bioarchaeology which owes so much to the strong foundations laid down over the last few decades The volume documents the degree to which bioarchaeological approaches have become normalized and integrated into anthropological research bioarchaeology has moved out of the appendix and into the interpretation of archaeological data New perspectives have emerged partly in response to theoretical changes within anthropology but also as a result of the engagement of the broader discipline with bioarchaeology
