

THE

PRIMITIVE DIVERSITY

AND SUCCESS OF ALTERNATE

GEOLOGICAL TIMES.

BY D. D. DART.

There is a view generally entertained by naturalists and geologists that genera and species of animals and plants are gradually more numerous in the present age of the world than in any previous geological period. This seems to me an entire misapprehension of the character and diversity of the fossils which have been discovered in the different geological formations, and to rest upon premises which are not exactly within the scope of science, and which are almost unobtainable. A comparison is necessary of the diversity and number of fossils of any geological period with those fossils which show of the living animals and plants belonging to the same strata and families, in the same time and space. The fossil remains which remain to us are not only so scattered, that the fossils themselves are often not known to the same extent as the animals which live at present upon the surface; which is why we will not understand their true nature and knowledge of fossils may be, it has been remarked, far more geological formations, to a far more extended area. Comparisons of fossils with the living animals ought, therefore, to be limited to geographical districts corresponding in extent to those in which the fossils occur; or, more properly, to fossil faunas with the local present-day faunas of the same area, with a corresponding fauna of the present period, and not with all the fossils of the same time living at present upon the whole surface of the globe. And when this is done
