The German Campaign in Russia George E. Blau, 1955 *The German Campaign in Russia* George E. Blau, 1955 *The German Campaign in Russia* Center of Military History, 1988 German Campaign in Russia Naval & Military Press, 2003-02

This American Department of the Army publication is important to any study of the German campaign in Russia because it is one of the German Report Series which was issued after the Second World War written by the German officers who had the most knowledge of the campaign. The publication looks above all at the planning for Operation Barbarossa in detail. The first discussions of July 1940 when Hitler ordered the German General Staff to prepare plans for the operation was followed by the genesis of a number of ideas for its execution. The Operations Order of February 1941 was followed by a number of changes. This led to the movement of the necessary troops to the east and the strategic concentration of air and land elements prior to the attack. All of this is described in detail in the book. Operations are then shown in detail with supporting maps and the treatment is chronological. The halt before Moscow and the indecision of 1942 is shown to have been the basis for the subsequent failure of the whole war against Russia. The effects of the Russian winter counter attack in 1942, the German summer offensive, the stagnation in the autumn of 1942 and the lead up to the Stalingrad debacle are all described in detail. The book is illustrated with a number of charts and 17 situation and planning maps. This publication is fundamental to a study of Operation Barbarossa partly because it sets the scene so well and also because the failings of 1941 and 1942 are shown to be building into a cumulative disaster from which the German Army was unable to recover.

Operational Logic And Identifying Soviet Operational Centers Of Gravity During Operation Barbarossa, 1941 Major David J. Bongi, 2015-11-06 This monograph examines Soviet operational centers of gravity during Operation Barbarossa the German invasion of the Soviet Union in 1941 Specifically the examination focuses in two areas 1 German planning for Operation Barbarossa 2 the operational objectives selected for the second phase of the campaign The second phase was selected because it was during this phase that the focus of the German military effort became diverse Two competing strategies within the German political and military command structure caused this While political ideological and economic factors influenced one purely military concerns influenced the other In the end the Germans diluted combat power in phase two towards three operational objectives Moscow Leningrad and the Ukraine Thus the research question for this monograph is Which if any of the German operational objectives for the second phase of the campaign were also Soviet operational centers of gravity The analysis of operational objectives uses Colonel William Mendel s and Colonel Lamar Tooke s analytical model called Operational Logic Selecting the Center of Gravity Potential centers of gravity are analyzed using a validity and a feasibility test This monograph concludes that Moscow was the operational center of gravity for the campaign by virtue of its direct and intrinsic relationship to the strategic center of gravity the Soviet Military

Joint Operational Warfare Milan N. Vego, 2009 Smallholder farmers and pastoralists fulfil an invaluable yet undervalued role in conserving biodiversity They act as guardians of locally adapted livestock breeds that can make use of even marginal environments under tough climatic conditions and therefore are a crucial resource for food

security But in addition by sustaining animals on natural vegetation and as part of local ecosystems these communities also make a significant contribution to the conservation of wild biodiversity and of cultural landscapes This publication provides a glimpse into the often intricate knowledge systems that pastoralists and smallholder farmers have developed for the management of their breeds in specific production systems and it also describes the multitude of threats and challenges these often marginalized communities have to cope with [Military Publications](#) United States. Soviet Cavalry Operations During the Second World War John S. Harrel,2019-09-30 The author of The Nisibis War analyzes the Red Army s usage of horse mounted units along the Soviet German Eastern Front during World War II While the development of tanks had largely led to the replacement of cavalry in most armies by 1939 the Soviets retained a strong mounted arm In the terrain and conditions of the Eastern Front they were able to play an important role denied them elsewhere John Harrel shows how the Soviets developed a doctrine of deep penetration using cavalry formations to strike into the Axis rear disrupting logistics and lines of communication encircling and isolating units Interestingly he also shows that this doctrine did not stem from the native cavalry tradition of the steppe but from the example of the American Civil War The American approach was copied by the Russians in WWI and the Russian Civil War refined by the Soviets in the early stages of World War Two and perfected during the last two years of the war The Soviet experience demonstrated that deep operations cavalry raids against enemy rear echelons set the conditions for victory Although the last horse mounted units disappeared in the 1950s their influence led directly to the formation of the Operational Manoeuvre Groups that ironically faced U S forces in the Cold War An expansive analysis of the technical tactical and operational employment of Soviet cavalry against the Germans and their Axis allies For practitioners who want to understand the history and development the book is a goldmine of overlooked campaigns and actions The book s dense and detailed presentation makes it valuable to operational planners and those interested in the Soviet German war ARMOR Magazine [Index of Administrative Publications](#) United States.
