Design, When Everybody Designs Ezio Manzini, 2015-03-06 The role of design both expert and nonexpert in the ongoing wave of social innovation toward sustainability In a changing world everyone designs each individual person and each collective subject from enterprises to institutions from communities to cities and regions must define and enhance a life project Sometimes these projects generate unprecedented solutions sometimes they converge on common goals and realize larger transformations As Ezio Manzini describes in this book we are witnessing a wave of social innovations as these changes unfold an expansive

open co design process in which new solutions are suggested and new meanings are created Manzini distinguishes between diffuse design performed by everybody and expert design performed by those who have been trained as designers and describes how they interact He maps what design experts can do to trigger and support meaningful social changes focusing on emerging forms of collaboration These range from community supported agriculture in China to digital platforms for medical care in Canada from interactive storytelling in India to collaborative housing in Milan These cases illustrate how expert designers can support these collaborations making their existence more probable their practice easier their diffusion and their convergence in larger projects more effective Manzini draws the first comprehensive picture of design for social innovation the most dynamic field of action for both expert and nonexpert designers in the coming decades *Design and the Creation of Social Value* Doctor Gjoko Muratovski, Craig Vogel, 2019-05-22 Just as the term design has been going through change growth and expansion of meaning and interpretation in practice and education the same can be said for design research The traditional boundaries of design are dissolving and connections are being established with other fields at an exponential rate Based on the proceedings from the IASDR 2017 Conference Re Research is an edited collection that showcases a curated selection of 83 papers just over half of the works presented at the conference With topics ranging from the introduction of design in the primary education sector to designing information for Artificial Intelligence systems this book collection demonstrates the diverse perspectives of design and design research Divided into seven thematic volumes this collection maps out where the field of design research is now Understanding Everyday Design Soyoung Kim Kwangmin Cho Chajoong Kim The more society gets complicated and developed the more demand for various products As a result we are living in a flood of various products However considering how people consume and use products in their daily life it is not difficult to find people transforming changing the original purpose or adding value to existing products instead of buying new ones This phenomenon has been defined as everyday design In a sense that everyday design provides a better understanding of actual uses in real context it deserves to be studied Therefore this paper attempts to figure out an underlying mechanism of everyday design For this a conceptual framework was developed whose focus was on what triggers everyday design what goals are set and how a product is transformed The conceptual framework was validated with a photographic inventory of users everyday design in our daily life The conceptual framework could provide a better understanding of everyday design in a systematic way If it is considered in the product development process it could contribute to an increase of use satisfaction as well as sustainable design The limitations and a further study are discussed at the end of the paper Social Value Creation through Multidisciplinary Design Education Steven Kyffin Mersha Aftab Nicholas Spencer The paper proposes that design with a multidisciplinary student cohort as active partners can play the role of bringing the four different stakeholder groupings namely government industry society and academia together within the creative consortia and create innovation for the greater good of the society By studying a selection of social innovation projects undertaken by multidisciplinary student

teams as connector integrators which engaged with companies government bodies and community groups we have examined a combination of four different activities across different economic and cultural human experience contexts to assess their different degrees of appropriateness in creating future value We apply these methods to establish creative consortia which has enabled us to reframe the context of the problem space We believe that the creative consortia has the potential to create more relevance in the solution space greater engagement in realizing the proposition into the future and a higher opportunity for integration of such future principles into emerging government policy and national innovation agendas

Taking Aim at wicked problems A Practical Philosophy for Educating Designers in the Making of Wise Decisions Paul Emmerson Robert Young Today s design pedagogies lack the characteristics for redressing the nature of the wicked problems they attempt to solve such as sustainability We argue it is not fair for future generations to suffer the systemic effects of our unsustainable consumer culture partly resulting from today s design professionals decisions which ensue because design is an amoral discipline lacking a systemic perspective To rectify design s characteristic failings as part of a PhD study we report a new pedagogical architecture founded as the synthesis of the practices of design and civics forming the relationship design as civics DaC a practical philosophy We position DaC as a reflexive systemic radical political praxis for every citizen possessing the explicit teleological goal to achieve the good life for all DaC takes a transdisciplinary approach It integrates the discoveries of cognitive science and linguistics to expose how we construct our understanding of the world interpreting metaphors and frames which we utilize to aim DaC Alongside shared social practice theory SSP and insights from developmental psychology that reveal the distinctly human capacity of shared intentionality engendering humankind s willingness for cooperation and empathy for fairness That living in a fairer society is desired by people from rival political perspectives with egalitarian societies reporting lower environmental impact lifestyles and more willingness for transitioning toward sustainment Thus it is humankind s cooperative behavior and aligning values that provides the foundational rationale of DaC s SSP goal to achieve the good life through the ongoing critical examination of its aim of resolving fairness between citizens

Developing a Matrix for Designerly Way of Creating Shared Value DCSV Four Examples of CSV via Perspectives of Design Kyulee Kim Today while profit maximization is still the bedrock of the capitalist model people have embraced the idea of social contribution as a useful strategy in businesses In this recent movement Creating Shared Value CSV strives for a win win solution that creates both social and business value While in its early stage CSV is showing promise and potential society is witnessing a paradigm shift from practices of corporate social responsibilities CSR to CSV which is more sustainable and effective approach Since Porter and Kramer originally introduced the concept in 2011 CSV s application has expanded to many areas of business management but it has not been discussed comprehensively in design research as of yet The title of this paper Designerly Way of Creating Shared Value DCSV is inspired by Nigel Cross s famous book Designerly way of knowing 2006 Designerly is an adjective describing how designers think and behave that is

different from professionals in scientific disciplines The aim of this paper is to propose a new matrix illustrating the link between creating shared value and design and to systemically describe the existing examples of DCSV The paper will begin with an introduction to the concept of CSV followed by a brief literature review on CSV in design research The second part will focus on demonstrating the new DCSV matrix by illustrating the four examples that exemplify it Design for Social Innovation Digital Technologies and Local Communities Teresa Franqueira Gon alo Gomes Abstract The use and democratization of new digital technologies have given visibility to groups of people and grassroots organizations that can be considered agents of change in the transition to a more sustainable world Design plays an important role in the definition of strategies and in the development of innovative solutions to tackle some of the contemporary problems society faces This paper aims to show several projects developed over the last 5 years in the subject Design for Social Innovation at the Master in Design and the Master in Engineering and Product Design at the University of Aveiro and its relation to the new social media and technologies By using Service Design tools to improve Social Innovations and the integration of new digital technologies we design new and improved solutions to foster sustainable development The creation of a DESIS Lab has also allowed to develop innovative design solutions within local communities The methodology used is based on Learning by Doing with an important and relevant initial phase using ethnographic methods The results are showed as academic projects that can be applied and replicated in different contexts The Extent of Transformation Measuring the Impact of Design in VCS Organizations Laura E Warwick Robert A Young A Design for Service DfS approach has been linked with impacts that significantly alter touchpoints services and organizational culture However there is no model with which to assess the extent to which these impacts can be considered transformational In the absence of such a model the authors have reviewed literature on subjects including the transformational potential of design characteristics of transformational design transformational change and organizational change From this review six indicators of transformational change in design projects have been identified evidence of nontraditional transformative design objects evidence of a new perspective evidence of a community of advocates evidence of design capability evidence of new power dynamics and evidence of new organizational standards These indicators along with an assessment scale have been used to successfully review the findings from a doctoral study exploring the impact of the DfS approach in Voluntary Community Sector VCS organizations This paper presents this model as a first step to establishing a method to helpfully gauge the extent of transformational impact in design projects Applying Design Thinking for Business Model Innovation for a Nonprofit Organization Case Study Art la Carte Alison Miyauchi Scott Cressman The challenges facing many small nonprofit organizations are increasing at a greater rate than the internal capacities of many within this sector are able to address effectively This situation has small nonprofits questioning their sustainability and ability to deliver their services in the long term Often these small nonprofit organizations are working within a business model and communications paradigm that has remained unchanged for decades and one which is proving

no longer effective in attracting awareness engagement and support Many of these organizations are facing a critical failure requiring significant business model innovation to achieve both their short mid and long term goals Design thinking is an avenue for nonprofits to achieve business model innovation by developing new unique concepts supporting an organization s viability and the processes for bringing those concepts to fruition This case study outlines the design thinking process applied to business model innovation for a small 22 year old nonprofit approaching critical business failure Generative Design Research for Sustainability Exemplary Cases for the Adaptation of the EC Guide Tool and the ERM Method Mert Kulaks z It r G ng r Boncuk u Dilruba O ur smail Yavuz Paksoy Senem Turhan a la Do an This paper presents the main process of a graduate course entitled Generative Design Research for Sustainability offered in the Department of Industrial Design at Middle East Technical University in the spring semester of 2015 2016 through exemplary design research cases conducted by the graduate students at the doctoral level These cases focus on the adaptation of the generative tool and the method namely Experience Chart EC Guide tool and Experience Reflection Modelling ERM method in line with the graduate students particular research topics First the paper provides the course objectives outcomes and process then it explains the EC Guide tool and the ERM method to be adapted and implemented within the context of the course Then these generative tool and method and their adaptations are demonstrated through the exemplary cases i e efficient use of working environment in design studios lighting practices in kitchen environment and interactive prototyping practice selected from the submitted assignments considering their quality originality and comprehensiveness The main emphasis of this paper is on the adaptation and implementation of the EC Guide tool and the ERM method through providing the experiences insights and suggestions of the graduate students who are also the co authors of the paper Based on that review major conclusions and findings are presented through comparing and contrasting these cases for the future development of the course Beyond Greener Things Sustainability within Communication Design Practice Niki Wallace Robert Crocker This paper reviews contemporary communication design practice in Australia through a series of interviews with practitioners conducted to better understand the place of sustainability in contemporary practice It is especially concerned with the expectations and experience of designers and their attitudes toward sustainability in practice and the contrast between designing greener things and establishing more sustainable outcomes for their clients through deeper collaboration The paper is part of a larger PhD project attempting to establish ways of expanding the understanding of sustainability for communication designers Craft and Design for Sustainability Leverage for Change Xiaofang Zhan Stuart Walker Traditional craft has been relegated to the margins in modern culture being perceived as out step with technological economic and societal progress However emergent research is rediscovering the nature of craft and its potential for contributing to design practice in conjunction with developments in science and technology Through the analyses of craft and sustainability strong connections are revealed as well as some incompatibilities The contribution of this paper is to a map a systemic view of craft and b establish a theoretical

understanding of the relationship between craft and a holistic understanding of sustainability Drawing on recent research that proposes three areas of leverage for sustainability we argue that craft as a system of making knowing and being has significant potential to contribute actively and tangibly to the transitional conditions thereby serving as an agency for sustainable transformation Nature Inspired Organizational Design Framework for Open Collaboration Platform Development Sojung Kim Joon Sang Baek Over the last two decades for profit and not for profit organizations have increasingly adopted open collaboration such as open innovation and crowdsourcing as a strategy for innovation Information and communication technology ICT has played a major role in forming open collaboration communities but organizational design also needs to be considered to encourage the active participation and collaboration of actors Nonetheless organizational design aspect has seldom been addressed in developing open collaboration platforms In this research an organizational design framework for open collaboration was developed through a nature inspired design approach This framework suggests that the self organization mechanism of social insects provides inspirations for the design of the platform especially in terms of setting simple rules to induce behaviors of the actors and facilitating interactions among them Since the open collaboration strategy depends on external actors who are not in employment relationship an organization cannot force their contribution Accordingly the organization s capability to induce the spontaneous participation of actors is essential and it implies the potential role of designers in platform design based on a thorough understanding of actors We thus claim that designers can bring a new perspective to organizational design Open collaboration platforms serve as an exemplar in which designers contribute to the design of an organizational environment that fosters collaboration
