Synthetic Fuel Technology Development In The United States A Retrospective Assessment:

Synthetic Fuel Technology Development in the United States Michael Crow, 1988-11-17 Direct coal liquefaction a synthetic liquid fuel process is one of the major developmental alternatives for meeting the anticipated fuel demands for the twenty first century This work provides a retrospective assessment of past attempts in this century to develop synthetic liquid fuel and applies the findings to produce reliable and pertinent data for the future Retrospective technology assessment a recent methodological invention is used by the authors to analyze the past synthetic liquid fuel programs and the reasons for their failures Bringing to bear four different perspectives economic technological policy and historical the authors draw broad conclusions that will help guide the next development effort in the United States **Energy** Joseph Russell

Greener Fischer-Tropsch Processes Peter M. Maitlis, Arno de Klerk, 2013-03-25 Greener Fischer Tropsch Processes How can we use our carbon based resources in the most responsible manner How can we most efficiently transform natural gas coal or biomass into diesel jet fuel or gasoline to drive our machines The Big Questions today are energy related and the Fischer Tropsch process provides industrially tested solutions This book offers a comprehensive and up to date overview of the Fischer Tropsch process from the basic science and engineering to commercial issues It covers industrial economic environmental and fundamental aspects with a specific focus on green concepts such as sustainability process improvement waste reduction and environmental care The result is a practical reference for researchers engineers and financial analysts working in the energy sector who are interested in carbon conversion fuel processing or synthetic fuel technologies It is also an ideal introductory book on the Fischer Tropsch process for graduate courses in chemistry and chemical engineering

Fischer-Tropsch Synthesis, Catalysts, and Catalysis Burtron H. Davis, Mario L. Occelli, 2016-04-06 This book is based on a symposium held during the 248th American Chemical Society meeting that focused on use of the Fischer Tropsch process in producing synthetic fuels Its contents reflect the four dominant subjects of the meeting catalyst preparation and activation catalyst activity and reaction mechanisms catalyst characterization and related reactions and topics concerning commercializing the Fischer Tropsch process It covers recent developments related to renewable resources and green energy and provides a glimpse of the commercial potential of the Fischer Tropsch process in synthetic fuel production

The End of Energy Michael J. Graetz, 2011-03-04 Forty years of energy incompetence villains failures of leadership and missed opportunities Americans take for granted that when we flip a switch the light will go on when we turn up the thermostat the room will get warm and when we pull up to the pump gas will be plentiful and relatively cheap In *The End of Energy* Michael Graetz shows us that we have been living an energy delusion for forty years Until the 1970s we produced domestically all the oil we needed to run our power plants heat our homes and fuel our cars Since then we have had to import most of the oil we use much of it from the Middle East And we rely on an even dirtier fuel coal to produce half of our

electricity Graetz describes more than forty years of energy policy incompetence and argues that we must make better decisions for our energy future Despite thousands of pages of energy legislation since the 1970s passed by a Congress that tended to elevate narrow parochial interests over our national goals Americans have never been asked to pay a price that reflects the real cost of the energy they consume Until Americans face the facts about price our energy incompetence will continue and along with it the unraveling of our environment security and independence

A Cultural History of Chemistry in the Modern Age Peter J. T. Morris, 2023-12-14 *A Cultural History of Chemistry in the Modern Age* covers the period from 1914 to the present The impact of chemistry and the chemical industry on science war society and the economy has made this era the Chemical Age Having prospered in the West chemical science spread across the globe and slowly became more diversified in terms of its ethnic and gendered mix After flourishing for sixty years the chemical industry was impacted by the Oil Crisis of the 1970s and became almost invisible in the West While the industry has clearly delivered many benefits to society such as new materials and better drugs it has been excoriated by critics for its impact on the environment The 6 volume set of the Cultural History of Chemistry presents the first comprehensive history from the Bronze Age to today covering all forms and aspects of chemistry and its ever changing social context The themes covered in each volume are theory and concepts practice and experiment laboratories and technology culture and science society and environment trade and industry learning and institutions art and representation Peter J T Morris is Honorary Research Associate at the Science Museum London and at University College London UK Volume 6 in the Cultural History of Chemistry set General Editors Peter J T Morris University College London UK and Alan Rocke Case Western Reserve University USA
