## **The Gas:**

The Gas Engine, 1908      **The Gas and Flame Men** Jim Leeke, 2024-02 When the United States officially entered World War I in 1917 it was woefully underprepared for chemical warfare in which the British French and Germans had been engaged since 1915 In response the U S Army created an entirely new branch the Chemical Warfare Service The army turned to trained chemists and engineers to lead the charge and called on an array of others including baseball players to fill out the ranks The Gas and Flame Men is the first full account of Major League ballplayers who served in the Chemical Warfare Service during World War I Four players two club executives and a manager served in the small and hastily formed branch six of them as gas officers Remarkably five of the seven Christy Mathewson Branch Rickey Ty Cobb George Sisler and Eppa Jephtha Rixey are now enshrined in the National Baseball Hall of Fame at Cooperstown New York The son of a sixth Hall of Famer player and manager Ned Hanlon was a young officer killed in action in France with the First Gas Regiment Prominent chemical soldiers also included veteran Major League catcher and future manager George Gabby Street and Boston Braves president and former Harvard football coach Percy D Houghton The Gas and Flame Men explores how these famous baseball men along with an eclectic mix of polo players collegiate baseball and football stars professors architects and prominent social figures all came together in the Chemical Warfare Service Jim Leeke examines their service and its long term effects on their physical and mental health and on Major League Baseball and the world of sports The Gas and Flame Men also addresses historical inaccuracies and misperceptions surrounding Christy Mathewson's early death from tuberculosis in 1925 long attributed to wartime gas exposure      Gas-making and Fuel Problems of the Gas Industry of California William Wallace Odell, 1926      *Estimating the Gas and Dye Quantities for Modified Tracer Technique Measurements of Stream Reaeration Coefficients* R. E. Rathbun, 1979      **Reactions of Hydroxyl Radicals with Oxygenated Hydrocarbons in the Gas Phase: A Laser Photolysis/Laser-Induced Fluorescence Study** Cornelia Bansch, 2017 Hydroxyl radicals OH play a key role in ignition processes and in the atmosphere Thus the detailed knowledge of the kinetics of OH reactions is crucial in combustion and atmospheric research In this work an experimental approach for time resolved studies of OH radical reactions at high pressures with pulsed laser photolysis laser induced fluorescence was revised and the reactions of dimethyl ether diethyl ether and dimethoxymethane with OH radicals were investigated in detail The results reveal a deeper insight into the reaction processes of ether compounds with OH in general contributing to a better understanding of the combustion of different biofuels and fuel additives      **Fundamental Structural Aspects and Features in the Bioengineering of the Gas Exchangers: Comparative Perspectives** J.N. Maina, 2002-02-14 The history of biology is replete with examples of how comparative biology helped clarify the meaning of structure and function in complex animals Indeed without the comparative approach to biology the birth of physiology would have been delayed Fishman 1979 Comparative morphologists are challenged to discern the changes that have occurred in evolution and

development of the forms and states of organisms as well as to explain the factors that compelled them e g Dullemeijer 1974 The main objective of this contribution is to present what I deem to be some of the fundamental structural aspects in the design of respiratory organs while debating and speculating on when how and why these states were founded My main thesis is that the modern gas exchangers are products of protracted processes that have entailed adaptation to specific environments and lifestyles Only those feasible designs that have proven adequately competent in meeting demands for molecular oxygen have been preserved Unfortunately August Krogh's Krogh 1941 and Pierre Dejours Dejours 1975 seminal works on the comparative physiology of the respiratory organs have not been paralleled by equally extensive and detailed morphological work Our approach has been to look into the limiting functional properties as regards the respiratory capacities of gas exchangers while finding out the specific structural adaptations that have evolved to meet the metabolic needs or to look into form and to discern how it limits function This has allowed a deduction of structure function correlation
