## The Glab Key:

**Merchant Vessels of the United States**, 1978 From 1894 95 1935 36 pt 6 of each volume is issued separately with titles 1894 95 1902 03 Code list of merchant vessels of the United States 1903 04 1935 36 Seagoing vessels of the United States *Flora of the Pacific Northwest* C. Leo Hitchcock, Arthur Cronquist, 2018-10-02 *Flora of the Pacific Northwest* first published in 1973 became an instant classic for its innovative style of providing species descriptions in the identification keys and for its comprehensive illustrations of nearly all treated taxa species subspecies and varieties Students rely on it as an essential primer while veteran botanists and natural resource managers use it as the definitive reference for the region's flora This completely revised and updated edition captures the advances in vascular plant systematics over the decades since publication of the first edition These advances together with significant changes in plant nomenclature the description of taxa new to science from the region and the recent documentation of new native and nonnative species in the Pacific Northwest required a thorough revision of this authoritative work *Flora of the Pacific Northwest* covers all of Washington the northern half of Oregon Idaho north of the Snake River Plain the mountainous portion of western Montana and the southern portion of British Columbia It accounts for the wild growing native and introduced vascular plants falling within those boundaries and includes Treatment of 5 545 taxa more than 1 000 taxa added from the first edition Illustrations for 4 716 taxa 1 382 more than the first edition Nomenclature changes for more than 40 percent of the taxa included in the first edition These enhancements make this new edition the most comprehensive reference on Pacific Northwest vascular plants for professional and amateur botanists ecologists rare plant biologists plant taxonomy instructors land managers nursery professionals and gardeners

**Flowering Plants. Eudicots** Job Kuijt, Bertel Hansen (deceased), 2014-10-21 In the present volume taxonomic treatments including descriptions of and keys to the families and genera for the orders Santalales and Balanophorales are offered the former group here comprising 12 families with 162 genera and about 2100 species and the latter with the single family Balanophoraceae composed of 16 genera and about 42 species The contentious family classification of Santalales has been thoroughly revised against the background of previous classifications as well as available structural and molecular evidence and also the classification of Balanophoraceae has been carefully updated Santalales are predominantly hemiparasites connected with either the branches or the roots of other green land plants whereas Balanophoraceae are holoparasites that form terrestrial tubers attached to the roots of woody hosts In both orders parasitism has led to considerable reductions of the vegetative and reproductive organs and detailed descriptions are given on the initiation of ramal and terrestrial parasitism in Santalales and the haustorial connection and tissue continuity between host and parasite in both groups The dramatic reduction of the vegetative body in Balanophoraceae which may lack all vegetative organs typically found in green land plants has promoted studies in the field of developmental morphology Thus the volume not only provides an overview of the diversity of the plant groups treated therein but also points to the interesting biological
