The Price Of Reindeer:

Cattle husbandry in Eastern Europe and China Abele Kuipers, Andriy Rozstalnyy, Gerry Keane, 2023-08-07 This book presents an analysis of the dairy and associated sector developments in Eastern Europe and China The transition in cattle husbandry in Eastern Europe resulting in enormous structural changes but not in an increased production volume is different from emerging countries like China where traditional small scale farming goes together with the remodelling or start of mega farms Capacity building by means of cooperation appears to be hindered by historical experience Farm development paths were studied in more depth in Poland Lithuania and Slovenia using detailed farmer surveys Farmers strategies availability of resources and opportunities and threats were analysed and interactive group trainings in strategic management were part of the analysis The results are presented here Although farmers showed similar wishes concerning farm development the local environment and policies determines the degree of achievement Farm fragmentation the high percentage of rented land and availability of suitable labour are major constraints Future EU policies are a concern but new technologies are embraced This book is a must for those interested in the transition in Eastern Europe It is indispensable to consultants marketers companies farm leaders and government officials in agriculture *Climate Change and Globalization in the Arctic* E. Carina H. Keskitalo, 2012-05-04 Climate change vulnerability assessment is a rapidly developing field However despite the fact that such major trends as globalization and the changing characteristics of the political and economic governance systems are crucial in shaping a community s capacity to adapt to climate change these trends are seldom included in assessments This book addresses this shortcoming by developing a framework for qualitative vulnerability assessment in multiple impact studies of climate change and globalization and applying this framework to several cases of renewable natural resource use The book draws upon case studies of forestry and fishing two of the largest sectors that rely on renewable natural resources and reindeer herding in the European North The study represents a bottom up view originating with the stakeholders themselves of the degree to which stakeholders find adaptation to climate change possible and how they evaluate it in relation to their other concerns notably economic and political ones Moreover the approach and research results include features that could be broadly generalized to other geographic areas or sectors characterized by renewable natural resource use Hearings United States.
