Geological Survey (U.S.)

The Geology Of Mars:

The Geology of Mars Mary Chapman, 2007-05-17 Research into the geological processes operating on Mars relies on interpretation of images and other data returned by unmanned orbiters probes and landers Such interpretations are based on our knowledge of processes occurring on Earth Terrestrial analog studies therefore play an important role in understanding the geological features observed on Mars This 2007 book presents direct comparisons between locales on Earth and Mars and contains contributions from leading planetary geologists to demonstrate the parallels and differences between these two neighboring planets Mars is characterized by a wide range of geological phenomena that also occur on Earth including tectonic volcanic impact cratering eolian fluvial glacial and possibly lacustrine and marine processes The book provides terrestrial analogs for data sets from Mars Global Surveyor Mars Odyssey Mars Exploration Rovers and Mars Express and will therefore be a key reference for students and researchers of planetary science

Preliminary Mariner Report on the Geology of Mars John F. McCauley, 1972 Mariner 9 results indicate that Mars is geologically far more heterogeneous than previously suspected from earlier flyby missions the surface has been shaped by volcanic tectonic erosional and depositional activity The equatorial region between 30 N and 30 S latitude is depicted in four geologic sketch maps and seventeen geologic units are defined on the basis of their textural characteristics The maps and the brief descriptions of geological units portrayed are followed by a series of more interpretive discussions dealing with topical problems and a summary geologic history Topics covered include cratering circular basins volcanism canyons chaotic terrain channels and eolian activity [The Geology of Mars](#) Thomas Richard McGetchin, 1959 **New Publications of the**
