S. Alexandrov, 1995 This volume contains a discriminating selection of papers with commentaries by one of the most creative theoretical physicists of our century Nobel Laureate Sir Nevill Mott His pioneering contributions 1928 1993 include Fermi liquid theory metal insulator transition the theory of noncrystalline materials high temperature superconductivity and many other discoveries *Sir Nevill Mott* Sir Nevill Francis Mott, 1995 This volume contains a discriminating selection of papers with commentaries by one of the most creative theoretical physicists of our century Nobel Laureate Sir Nevill Mott His pioneering contributions 1928 1993 include Fermi liquid theory metal insulator transition the theory of noncrystalline materials high temperature superconductivity and many other discoveries *Subnuclear Physics, the First 50 Years: Highlights From Erice To Eln* O Barnabei, P Pupillo, Fabio Roversi Monaco, Antonino Zichichi, 2000-08-04 For the Galvani Bicentenary Celebrations the University of Bologna and its Academy of Sciences singled out subnuclear physics as the field of scientific research to be associated with this important event as it would best illustrate for the new generation of students the challenge inherent in fundamental sciences Subnuclear physics was born 50 years ago and has represented ever since the new frontiers of Galilean science In his opening lecture delivered on the first day of the new academic year Professor Antonino Zichichi analytically reviewed the basic conceptual developments and main discoveries achieved in subnuclear physics during the last 50 years Given the importance of this field of fundamental research Professor Zichichi was invited to expand the contents of his lecture into a book and the outcome is this invaluable volume Nevill Mott E. A. Davis, 1998-03-17 Sir Nevill Mott was Britain's last Winner of the Nobel Prize for Physics This is a tribute to the life and work of Nobel Laureate Nevill Mott a hugely admired and appreciated man and one of this country's greatest ever scientists It includes contributions from over 80 of his friends family and colleagues full of anecdotes and appreciations for this colossus of modern physics Formation And Evolution Of Black Holes In The Galaxy: Selected Papers With Commentary Hans A Bethe, Gerald E Brown, Chang-hwan Lee, 2003-03-04 In published papers H A Bethe and G E Brown worked out the collapse of large stars and supernova explosions They went on to evolve binaries of compact stars finding that in the standard scenario the first formed neutron star always went into a black hole in common envelope evolution C H Lee joined them in the study of black hole binaries and gamma ray bursts They found the black holes to be the fossils of the gamma ray bursts From their properties they could reconstruct features of the burst and of the accompanying hypernova explosions This invaluable book contains 23 papers on astrophysics chiefly on compact objects written over 23

years The papers are accompanied by illuminating commentary In addition there is an appendix on kaon condensation which the editors believe to be relevant to the equation of state in neutron stars and to explain why black holes are formed at relatively low masses

**Creation Of Quantum Chromodynamics And The Effective Energy, The: In Honour Of A Zichichi On The Occasion Of The Galvani Bicentenary Celebrations** L N Lipatov, Gabriele Veneziano, Gerard 't Hooft, Vladimir N Gribov, Victor F Weisskopf, 2001-01-03 UNDER THE SPELL OF THE GAUGE PRINCIPLE by G t Hooft The University of Bologna and its Academy of Sciences in collaboration with the Italian National Institute for Nuclear Physics and the Italian Physical Society celebrated in 1998 the bicentenary of a great pioneer in the field of electric phenomena Luigi Galvani the father of macroelectricity During these two centuries the physics of electric phenomena has given rise first to the Maxwell equations then to quantum electrodynamics and finally to the synthesis of all reproducible phenomena the Standard Model A cornerstone of the Standard Model is quantum chromodynamics QCD which describes the interaction between quarks and gluons in the innermost part of the structure of matter The discovery of QCD will be recalled in the future as one of the greatest achievements of mankind Many physicists the world over have contributed to its creation on both the experimental and the theoretical front Professor Antonino Zichichi has played an important role in this scientific venture as documented by his works which are reproduced in this invaluable volume One of the founders of European physics Professor Victor F Weisskopf contributes with his memories of the time when QCD had many problems This volume owes its existence to a founding father of QCD Professor Vladimir N Gribov whose sudden demise prevented him from directly contributing to its final edition Two world leaders in subnuclear theoretical physics Professors Gerardus t Hooft and Gabriele Veneziano illustrate the significance of the contributions of Antonino Zichichi in QCD

development of science in the second half of this century This important volume includes many of Schwinger's most important papers on the above and other topics such as the theory of angular momentum and the theory of many body systems The papers collected here continue to underlie much of the work done by theoretical physicists today **From the Preshower to the New Technologies for Supercolliders** Björn H. Wiik, 2002 In the year 2000 the city of Bologna was the European Capital for Culture For this reason the University of Bologna and its Academy of Sciences following the Guglielmo Marconi Centenary and the Luigi Galvani Bicentenary Celebrations decided to call attention to the major achievements of their most distinguished members in science and technology This invaluable volume presents a series of inventions and technological developments some thought of and directly implemented by Professor Antonino Zichichi others suggested and developed under his leadership all of them having contributed to the discovery of new particles and new phenomena in the field of subnuclear physics The book was conceived by an eminent scientist Professor Dr Björn H Wiik Director of Germany's most prestigious physics laboratory DESY Hamburg It would not be published were it not for Professor Dr Albrecht Wagner Chairman of the DESY Board of Directors and Dr Horst Wenninger from CERN Geneva the greatest European physics laboratory **Selected Papers Of Richard Feynman (With Commentary)** Laurie M Brown, 2000-10-25 These scientific papers of Richard Feynman are renowned for their brilliant content and the author's striking original style They are grouped by topic path integral approach to the foundations of quantum mechanics and quantum field theory renormalized quantum electrodynamics theory of superfluid liquid helium theory of the Fermi interaction polarons gravitation partons computer theory etc Comments on Feynman's topics are provided by the editor together with biographical notes and a complete bibliography of Feynman's publications **Selected Works of Emil Wolf** Emil Wolf, 2001 This invaluable book presents most of the important papers of Emil Wolf published over half a century It covers chiefly diffraction theory especially the analysis of the focal region the theory of direct and inverse scattering phase space methods in quantum mechanics the foundation of radiometry phase conjugation and coherence theory Several papers which have become classics of the optical literature are included such as those on Wolf's rigorous formulation of the theory of partial coherence and partial polarization the introduction of diffraction tomography and his discovery of correlation induced shifts of spectral lines often called the Wolf effect There are also papers dealing with the historical development of optics and some review articles Contents Diffraction Radiation Theory and String Excitations Coherence and Statistical Optics Scattering Foundations of Radiometry Articles of Historical Interest Analyticity Causality and Dispersion Relations Scientists Who Created the World of Optics The Development of Optical Coherence Theory Recollections Commencement Remarks Publications of Emil Wolf Readership Physicists and engineers particularly optical scientists and optical engineers *Research On Particle Imaging Detectors* Georges Charpak, 1995-07-07 Much instrumentation has been developed for imaging the trajectories of elementary particles produced in high energy collisions Since 1968 gaseous detectors beginning with multiwire chambers and drift chambers

have been used for the visualisation of particle trajectories and the imaging of X rays neutrons hard gamma rays beta rays and ultraviolet photons This book commemorates the groundbreaking research leading to the evolution of such detectors carried out at CERN by Georges Charpak Nobel Prizewinner for Physics in 1992 Besides collecting his key papers the book also includes original linking commentary which sets his work in the context of other worldwide research

**How We Learn, how We Remember** Leon N. Cooper, 1995 Leon Cooper's somewhat peripatetic career has resulted in work in quantum field theory superconductivity the quantum theory of measurement as well as the mechanisms that underly learning and memory He has written numerous essays on a variety of subjects as well as a highly regarded introduction to the ideas and methods of physics for non physicists Among the many accolades he has received some deserved one he likes specially is the comment of an anonymous reviewer who characterized him as a nonsense physicist This compilation of papers presents the evolution of his thinking on mechanisms of learning memory storage and higher brain function The first half proceeds from early models of memory and synaptic plasticity to a concrete theory that has been put into detailed correspondence with experiment and leads to the very current exploration of the molecular basis for learning and memory storage The second half outlines his efforts to investigate the properties of neural network systems and to explore to what extent they can be applied to real world problems In all this collection hopefully provides a coherent no nonsense account of a line of research that leads to present investigations into the biological basis for learning and memory storage and the information processing and classification properties of neural systems

Onsager's scientific achievements were characterized by deep insights into the natural sciences. His two best-known accomplishments are his reciprocal relations for irreversible processes for which he received the 1968 Nobel Prize in Chemistry and his explicit solution of the two-dimensional Ising model, a mathematical tour de force that created a sensation when it appeared. In addition, he made significant theoretical contributions to other fields including electrolytes, colloids, superconductivity, turbulence, ice, electrons in metals and dielectrics. In this volume, Onsager's contributions are divided into the following fields: irreversible processes, the Ising model, electrolytes, colloids, helium II and vortex quantization, off-diagonal long-range order and flux quantization, electrons in metal, turbulence, ion recombination, fluctuation theory, dielectrics, ice and water, biology, Mathieu functions. The different fields are evaluated by leading experts. The commentators are P.W. Anderson, R. Askey, A. Chorin, C. Domb, R.J. Donnelly, W. Ebeling, J.C. Justice, H.N.W. Lekkerkerker, P. Mazur, H.P. This volume consists of about 40 papers which made fundamental contributions to our understanding of particle physics during the last few decades. The unpublished lecture note on string theory (1969) and the first paper on spontaneous symmetry breaking (1961) are retyped and included. The book also contains a memoir of Prof. Nambu on his research career.
