Tale Of Three Cities Or The Glocalization Of City Management:

A Tale of Three Cities Barbara Czarniawska-Joerges, 2002 Cities are complex sprawling diverse places They are organized but disorganized managed but unmanaged orderly but disorderly Modern metropolitan cities reproduce themselves and we are familiar with the common icons that are replicated in every part of the globe but how should we understand cities For the past five years Professor Czarniawska has been leading a research project on globalization and the management of cities Rather than seeing the city as a conurbation or a location of economic activity or in terms of governance and administration Czarniawska explores the city as an action net An action net of this sort includes various organizations municipal state private and voluntary and non organized individuals Such an approach was designed to avoid the fallacy of viewing the big city as one big organization The city is thus conceived as a particularly complex and disorderly action net a seamless web of interorganizational networks where the city administration proper constitutes just one point of entry and by no means provides a map of the entire terrain The research focuses on three European capitals Warsaw Stockholm and Rome At the outset leading politicians and officials in each city listed the major problems and projects that the city was engaged in for example environmental reforms improvement of public utilities privatization financial targets etc The author selected a number of these for more detailed study reporting upon interesting similarities and differences between the approaches taken The book aims to explore organizing processes in their local context while following the connections between such contexts

Making Sense of Complexity in Projects Steve Raue, 2024-11-25 This book explores project management PM from a new perspective Project management is facing a paradigmatic stalemate Its major challenge is complexity Its current paradigmatic foundation in first order cybernetics has reached its limits More tools are created and project management is applied to any potential context expecting better results while doing more of the same Beyond conventional project management agile and other project management approaches have emerged as new options to answer the complexity challenge Yet the question remains whether new options and more tools in light of the current shortcomings can create enough momentum for project management as a whole to overcome its paradigmatic stalemate and evolve toward new paradigms based on second order cybernetics This book will embark on a journey to explore current paradigms in project management and argue why an analysis of discourse practices in project management may be critical to generating new paradigmatic perspectives The aim of this book is to provide an alternative perspective on projects as discourses and project management as a means to observe and conduct these discourses Instead of defining what projects and project management are the approach is to look at what people talk about when doing projects and apply project management It will arrive at a picture of how discourses about project management are shaped and institutionalised through the sensemaking of individuals and selected communities in their specific project practice and how these discourses shape project management in turn It is argued that this self reinforcing circle leads to a certain solidification of project

management paradigms which prove insufficient in dealing with project complexity However it will also be argued that project practitioners can utilise their self reflection and self description of these discourse conventions to obtain more meaningful project conversations and arrive at a unified and systemically integrated understanding of project management This book will be of particular relevance to those interested in current issues underlying project management More generally it will be a valuable resource for researchers of project management organisational studies and governance

The Social Construction of Public Administration Jong S. Jun, 2012-02-01 In this conceptual guided tour of contemporary public administration Jong S Jun challenges the limitations of the discipline which he argues make it inadequate for understanding today's complex human phenomena Drawing on examples and case studies from both Eastern and Western countries he emphasizes critical and interpretive perspectives as a counterforce to the instrumental technical rationality that reduces the field to structural and functionalist views of management He also emphasizes the idea of democratic social construction to transcend the field's reliance on conventional pluralist politics Jun stresses that public administrators and institutions must create opportunities for sharing and learning among organizational members and must facilitate interactive processes between public administrators and citizens so that the latter can voice their problems and opinions The future role of public administrators will be to transcend the limitations of the management and governing of modern public administration and to explore ways of constructing socially meaningful alternatives through communicative action and the participation of citizens

Public Innovation through Collaboration and Design Christopher Ansell, Jacob Torfing, 2014-06-20 While innovation has long been a major topic of research and scholarly interest for the private sector, it is still an emerging theme in the field of public management. While results-oriented public management may be here to stay, scholars and practitioners are now shifting their attention to the process of management and to how the public sector can create value. One of the urgent needs addressed by this book is a better specification of the institutional and political requirements for sustaining a robust vision of public innovation through the key dimensions of collaboration, creative problem solving, and design. This book brings together empirical studies drawn from Europe, the USA, and the antipodes to show how these dimensions are important features of public sector innovation in many Western democracies with different conditions and traditions. This volume provides insights for practitioners who are interested in developing an innovation strategy for their city, agency, or administration and will be essential reading for scholars, practitioners, and students in the field of public policy and public administration.

User-based Innovation in Services Jon Sundbo, Marja Toivonen, 2011-01-01 This book demonstrates pioneering work on user-based service innovation using an analytical framework. This approach involves understanding the needs of users, the service firms collaborating with them, and recognising the fact that users are innovators and as such services develop whilst in use. As well as presenting case studies, the book discusses theoretically what user-based innovation means in the context of services. Three main fields are analysed: user-based innovation in knowledge-intensive business services, user-based innovation in public services, and models and methods for structuring user-based innovation. Incorporating both an academic and analytical approach, this insightful book will be a source of inspiration for researchers in innovation and services. Graduate and postgraduate students in business administration and innovation, as well as administrators in public administrations and executive managers in service firms, will also find plenty of important information in this invaluable resource.
