## **Small Wells Manual:**

**Small Wells Manual** Ulric P. Gibson, Rexford D. Singer, 2002-06 It has been estimated that nearly two thirds of the one and a half billion people living in the developing countries are without adequate supplies of safe water The consequences of this deficiency are innumerable episodes of the debilitating and incapacity enteric diseases which annually affect an estimated 500 million people and result in the deaths of as many as 10 million about half of whom are children Although there are many factors limiting the installation of small water systems the lack of knowledge in regard to the availability of ground water and effective means of extracting it for use by rural communities is a major element It is anticipated that this manual will make a major contribution toward filling this need by providing the man in the field not necessarily an engineer or hydrologist with the information needed to locate construct and operate a small well which can provide good quality water in adequate quantities for small communities The manual was prepared by the Agency for International Development and the University of Minnesota

**Root zone salinity management using fractional skimming wells with pressurized Irrigation: proceedings of the Year-End Seminar 2001** Muhammad Siddique Shafique, Muhammad Yasin, Muhammad Mehboob Alam, In the short water supply environment of Pakistan farmers try to minimize the gap between demand and supply of canal water by extracting groundwater for irrigation purposes However saline groundwater upconing may occur in response to fresh groundwater withdrawals from unconfined aquifer underlain by salty groundwater Skimming well technology can help in controlling this upconing phenomenon However in most cases the small discharges of such wells cannot be efficiently applied on surface irrigated croplands Pressurized irrigation systems use small discharge effectively but the cost and availability of equipment in the local market are the constraints Root zone salinity is also expected to increase if this skimmed groundwater is used for irrigation purposes particularly in the absence of proper salinity management practices To address these issues International Water Management Institute IWMI Water Resource Research Institute WRI and Mona Reclamation Experimental Project MREP collaborated to undertake an applied research project on Root Zone Salinity Management Using Fractional Skimming Wells with Pressurized Irrigation This project was started in March 1999 and concluded in June 2003 The National Drainage Program NDP Research Component WAPDA funded this project
