Cotton,George Bryan,Susan C. van den Heever,2010-12-21 Storm and Cloud Dynamics focuses on the dynamics of clouds and of precipitating mesoscale meteorological systems Clouds and precipitating mesoscale systems represent some of the most important and scientifically exciting weather systems in the world These are the systems that produce torrential rains severe winds including downburst and tornadoes hail thunder and lightning and major snow storms Forecasting such storms represents a major challenge since they are too small to be adequately resolved by conventional observing networks and numerical prediction models Provides a complete treatment of clouds integrating the analysis of air motions with cloud structure microphysics and precipitation mechanics Describes and explains the basic types of clouds and cloud systems that occur in the atmosphere fog stratus stratocumulus altocumulus altostratus cirrus thunderstorms

tornadoes waterspouts orographically induced clouds mesoscale convection complexes hurricanes fronts and extratropical cyclones Summarizes the fundamentals both observational and theoretical of atmospheric dynamics thermodynamics cloud microphysics and radar meteorology allowing each type of cloud to be examined in depth Integrates the latest field observations numerical model simulations and theory Supplies a theoretical treatment suitable for the advanced undergraduate or graduate level as well as post graduate

The Magellanic Clouds A.B. Muller,2013-06-29 On March 28 and 29 1969 at the occasion of the dedication of the European Southern Observatory some 90 astronomers from all over the world gathered at the ESO headquarters at Santiago de Chile for discussing problems of the Magellanic Clouds They came from Argentina Australia Chile Mexico South Africa and the United States as well as from Europe these latter naturally mostly from the member states of ESO The choice of the subject was an obvious one When erecting the European Southern Observatory as a joint effort in European astronomy it was agreed from the beginning that the field of research should be the southern sky so far hardly explored with large telescopes Among the objects to be investigated the Magellanic Clouds rank highest together with the galactic centre region and the southern spiral structure Being located ten times closer than the nearest large stellar systems accessible to northern observers and containing a stellar population ranging in age from the oldest down to star formation the Clouds provide an ideal laboratory for research on to the stage current problems in astrophysics Yet most of the northern observational astronomers were hardly acquainted with the Magellanic Clouds naturally they are used to think in terms of research projects that can be conducted at their observatories A survey of the status of knowledge and research on the Clouds therefore appeared in order now that the first medium size telescopes of ESO came into operation
