McCrank,2001 Here is an extensive review and bibliographic essay backed by 5 000 citations about developments in information technology since the advent of personal computing and the convergence of the disciplines Its focus is on the access preservation and analysis of historical information primarily in electronic form and the relationships between new methodology and instructional media technique and research trends in library special collections digital libraries electronic and data archives and museums *Information First* Roger Evernden,Elaine Evernden,2003

Information first Integrating Knowledge and Information Architecture for Business Advantage is a fundamental guide for unleashing information potential by combining the discipline of information architecture with the power of knowledge management to drive organizational changes This book combines techniques from knowledge management and information architecture to provide a layer above the detail techniques for seeing the big picture *Corporate Memory* Kenneth A.

Megill,2005-08-25 Corporate memory is the body of information that an organization needs to keep for re use It is the active and historical information that an organization has that is worth sharing managing and preserving to enable it to function effectively This book is aimed at records managers and archivists who are responsible for maintaining and managing information within an organization It describes fully the most up to date methods and approaches to this essential function In addition it also discusses the adoption of an international standard for record management *Knowledge Management*

Elayne Coakes,2003-01-01 This scholarly discussion of managerial challenges details the most recent research on how

organizations can better create share and exploit knowledge Spanning the business and public service context the information provided covers practical issues such as measuring returns establishing trust and integrating technology Also discussed are knowledge management systems Internet support and information systems development **The Gordian Knot** W. Russell Neuman, Richard Jay Solomon, Lee W. McKnight, 1999-07-26 Veterans of the high definition TV wars of the 1980s the authors social scientists as well as technologists came to see themselves as chroniclers and students of an intriguing and serious techno economic conflict Why they asked did so few understand the rules of the game In a broad account accessible to generalist and specialist alike they address the current national debate about the development of a national information infrastructure locating the debate in a broad historical narrative that illuminates how we got here and where we may be going and outlining a bold vision of an open communications infrastructure that will cut through the political gridlock that threatens this information highway Technical change the authors argue is creating a new paradigm that fits neither the free market nor regulatory control models currently in play They detail what is wrong with the political process of the national information infrastructure policy making and assess how different media systems telecommunications radio television broadcasting were originally established spelling out the technological assumptions and organizational interests on which they were based and showing why the old policy models are now breaking down The new digital networks are not analogous to railways and highways or their electronic forebears in telephony and broadcasting they are inherently unfriendly to centralized control of any sort so the old traditions of common carriage and public trustee regulation and regulatory gamesmanship no longer apply The authors technological and historical analysis leads logically toward a policy proposal for a reformed regulatory structure that builds and protects meaningful competition but that abandons its role as arbiter of tariffs and definer of public service and public interest *Electronic Crime Scene Investigation*, 2001 The New Craft of Intelligence Robert David Steele, 2002 Digital Information Design (DID) Foundation Brian Johnson, Leon-Paul de Rouw, 2021-03-09 Digital Information Design DID is primarily a business information management BIM model As with any model it is used to help you to describe problems and test potential solutions DID is not like any other method or framework model it is independent of any other existing model or framework and does not claim to manage the entirety of the design of business information services DID identifies useful and widely used best practices that are designed specifically for use in any phase of business information service development from idea conception specification design test handover service management and operation or managing architectural issues or hardware and software installation Primarily DID was developed to manage the quality of information and how to put it to good use The DID model has been designed for you to identify what you need and when you need it when designing business information services and as a broad guide identifies key points in existing frameworks that are particularly useful The model is wholly independent of all other frameworks including BiSL and BiSL Next in which the basic design is rooted You can choose and use whatever you

wish the model will help you to assess the validity of your choices and identify strengths and weaknesses in your approach. The DID model focuses on the common languages to describe key elements of design: need and value, mission and capability, key business information perspectives, business information data, services and technology, and the high level domains: governance, strategy improvement and operation that must be managed in order to effectively run any business. DID helps you to identify only what you need to ensure that business information design reflects what is needed by your enterprise. The model can be used entirely separately from the framework level guidance discussed and it can be used at any level in the organization. The essentials of DID are explained in two books: this book, *Foundation*, and the *Practitioner* book that will be published later.

Information First Elaine Evernden, Roger Evernden, 2012-06-25 Information is seriously undervalued and underused as a corporate resource. The pressures of global competition and a growing dependence on information technology mean that the effective use of information is more important now than it has ever been. This book is a fundamental guide for unleashing information potential by combining the discipline of information architecture with the power of knowledge management to drive organizational changes. Instead of unlocking the potential of information, people are drowning in detail. Current books only approach this subject from an information technology perspective. This book combines techniques from knowledge management and information architecture to provide a layer above the detail techniques for seeing the big picture.

Peeling the Onion: IT Governance and Management for Business Managers Gregg Aytes, 2012 *Delivering the Vision* Eileen Milner, 2002-06-01 Political rhetoric surrounding the role of information and knowledge in society in the twenty first century is often thrown into sharp relief by the realities of practice. *Delivering the Vision* explores the way in which public service visions have developed globally and how successful they have been in contributing to major social and economic change. This edited text contains a range of case studies from the United Kingdom, the Republic of Ireland, Canada, the USA and Australia. Contributors focus both on those factors critical to success and on reasons for failure but a common theme to emerge across all contributions is the requirement for a clear political vision, commitment and leadership if the shift from traditional forms of social and economic organisation to high value knowledge intensive economies is to be safely negotiated. At the same time individual case studies provide valuable blueprints for successful implementation of an ambitious public service change agenda. *Delivering the Vision* is accessible and relevant to all those interested in the management and reform of public sector organisations. It is a companion volume to the editor's earlier text *Managing Information and Knowledge in the Public Sector* Routledge 2000.
