Beyond Sputnik and the Space Race Hugh R. Slotten, 2022-02-08 A fascinating account of how the United States established the first global satellite communications system to project geopolitical leadership during the Cold War On July 20 1969 the world watched spellbound as NASA astronaut Neil Armstrong stepped off the Apollo 11 lunar module to walk on the moon NASA estimated that 20 percent of the planet's population nearly 650 million people watched the moon landing footage which was made possible by the first global satellite communications system the International Telecommunications Satellite Organization or Intelsat In *Beyond Sputnik and the Space Race* Hugh R Slotten analyzes the efforts of US officials especially during the Kennedy administration to establish this satellite communication system and open it to all countries of the world Locked in competition with the Soviet Union for both military superiority and international prestige President John F Kennedy overturned the Eisenhower administration's policy of treating satellite communications as simply an extension of traditionally regulated telecommunications Instead of allowing private communications companies to set up separate systems that would likely primarily serve major developed regions the new administration decided to take the lead in establishing a single world system Explaining how the East West Cold War conflict became increasingly influenced by North South tensions during this period Slotten highlights the growing importance of non aligned countries in Asia Latin America and Africa He also underscores the importance of a political economy of total Cold War in which many crucial aspects of US society became tied to imperatives of national security and geopolitical prestige Drawing on detailed archival records to examine the full range of decisionmakers involved in the Intelsat system *Beyond Sputnik and the Space Race* spotlights mid and lower level agency staff usually ignored by historians One of the few works to analyze the establishment of a major global infrastructure project this book provides an outstanding analytical overview of the history of global electronic communications from the mid nineteenth century to the present

International Regimes for the Final Frontier M. J. Peterson, 2012-02-01 Neither rational choice theory with its emphasis on interest calculation nor sociological institutionalist theory with its emphasis on identity defined rule following indicates how governments determine which of their multiple interests or identities are at stake in a particular situation or how they develop mutual comprehension of each other's goals *International Regimes for the Final Frontier* addresses these gaps by tracing how governments approach an unfamiliar issue in this case international agreements regulating human activity in outer space between 1958 and 1988 and examines three ways situation definitions channel governments approaches to issues or problems

Ratto-Nielsen,2009-12-26 This study examines the evolution of the international regime in telecommunications with the main objective of furthering our understanding of the process of regime transformation The dominant theories of international relations realism and institutional liberalism specify how states with shared interests use institutions to realize joint gains and to minimize the possibility of defection But these theories have little to say about when states will attempt to change the objectives that lead them to create the international institution in the first place The main goal of this book is to investigate and test the assumption that domestic politics by themselves can explain the dynamics of regime creation evolution and change as it happened within the International Telecommunications Union ITU **Global Telecommunications** Raymond

The Politics of International

Telecommunication Regulation James G. Savage, 1989

The Political Economy of Communications Kenneth

Dyson, Peter Humphreys, 2023-10-20 First published in 1990 The Political Economy of Communications explores the central theme of the relationship between politics and markets in policy development The contributors show how governments have been drawn into increasing interdependency by technological and market developments with international institutions like the European Community becoming more important in these policy areas They argue that neither government ideologies nor market and technological forces offer an adequate account of the processes of change in communications policy These conclusions lead to a critique of central theories of international political economy notably neo liberalism and the authors advocate instead a neo pluralist perspective for the study of political economy of communications an approach that takes institutions much more seriously as a central unit of analysis The book will be of interest to students of international relations European studies and media and telecommunication studies as well as to political scientists and economists concerned with

public policy **The Future Of Satellite Communications** George A Coddington, 2019-07-11 This book emphasizes U S policy considerations in as much as the U S has been at the forefront of satellite technology and its application It addresses the impact of the earlier U S policy of global monopoly on the development of international satellite systems Global Markets and Government Regulation in Telecommunications Kirsten Rodine-Hardy, 2013-03-25 In recent years liberalization privatization and deregulation have become commonplace in sectors once dominated by government owned monopolies In telecommunications for example during the 1990s more than 129 countries established independent regulatory agencies and more than 100 countries privatized the state owned telecom operator Why did so many countries liberalize in such a short period of time For example why did both Denmark and Burundi nations differ along so many relevant dimensions liberalize their telecom sectors around the same time Kirsten L Rodine Hardy argues that international organizations not national governments or market forces are the primary drivers of policy convergence in the important arena of telecommunications regulation they create and shape preferences for reform and provide forums for expert discussions and the emergence of policy standards Yet she also shows that international convergence leaves room for substantial variation among countries using both econometric analysis and controlled case comparisons of eight European countries
