### **The Politics of Pollution in a Comparative Perspective ,1978      The Politics of Environmental Performance**

Detlef Jahn,2016-10-27 As the world faces the prospect of climate change nuclear disasters and water scarcity it is clear that environmental degradation is an increasingly serious challenge with economic and social consequences In this book Detlef Jahn analyzes political processes in a macro comparative study in order to estimate the role of politics in the field of environmental performance in twenty one OECD countries His model demonstrates various styles of politics used to combat environmental degradation He finds that economic and environmental performance are still closely linked and that moving towards a service society does not by itself solve the environmental challenge The close relationship of these areas was made strikingly clear in the economic crisis of the new millennium He argues that economic globalization fosters environmental deterioration and undermines efforts in domestic politics and international coordination to improve the environmental record

**Under Technology's Thumb** William Leiss,1990 The publication of William Leiss book The Domination of Nature brought him wide recognition as a perceptive and judicious author In this brilliant new collection of essays on the philosophy of nature Leiss argues effectively for an attitude of caring and respect for the environment rather than one of domination

Petroleum Extraction in San Luis Obispo County, California ,1998 Silent Spill Thomas D. Beamish,2002-02-01 In the Guadalupe Dunes 170 miles north of Los Angeles and 250 miles south of San Francisco an oil spill persisted unattended for 38 years Over the period 1990 1996 the national press devoted 504 stories to the Exxon Valdez accident and a mere nine to the Guadalupe spill even though the latter is most likely the nation s largest recorded oil spill Although it was known to oil workers in the field where it originated to visiting regulators and to locals who frequented the beach the Guadalupe spill became troubling only when those involved could no longer view the sight and smell of petroleum as normal This book recounts how this change in perception finally took place after nearly four decades and what form the response took Taking a sociological perspective Thomas Beamish examines the organizational culture of the Unocal Corporation whose oil fields produced the leakage the interorganizational response of regulatory agencies and local interpretations of the event He applies notions of social organization social stability and social inertia to the kind of environmental degradation represented by the Guadalupe spill More important he uses the Guadalupe Dunes case as the basis for a broader study of environmental blind spots He argues that many of our most pressing pollution problems go unacknowledged because they do not cause large scale social disruption or dramatic visible destruction of the sort that triggers responses Finally he develops a model of social accommodation that helps explain why human systems seem inclined to do nothing as trouble mounts **Petroleum Extraction in Ventura County, California** ,1998 **Economy & Ecology: Towards Sustainable Development** F. Archibugi,Peter Nijkamp,2013-03-09 After a period of relative silence recent years have been marked by an upswing of interest in environmental issues The publication of the report of the World Commission on Environment and Development on Our Common Future 1987 has acted as a catalyst for a revival of the environmental awareness not only regarding local and daily pollution problems but also and in particular regarding global environmental decay and threats to a sustainable development In a recent study by W M Stigliani et al on Future Environments for Europe Executive Rep rt 15 IIASA

Laxenburg 1989 the environmental implications of various alternative socioeconomic development pathways with respect to eleven environmental issues that could become major problems in the future are analysed These issues include Managing water resources in an era of climate change Acidification of soils and lakes in Europe Long term forestry management and the possibility of a future shortfall in wood supply Areas of Europe marginalized by mainstream economic and agricultural development Sea level rise Chemical pollution of coastal waters Toxic materials buildup and the potential for chemical time bombs Non point source emissions of potentially toxic substances Transportation growth versus air quality Decreasing multifunctionality of land owing to urban and suburban land development Increasing summer demand for electricity and the impact on air quality
