

# A POLYCHROMATIC COMPOSITE LAYERING APPROACH FOR SOLVING A COMPLEX CLASS IV/DIRECT VENEER/DIASTEMA COMBINATION: PART II

Newton Fahl, Jr, DDS, MS\*

*Restoration of a Class IV defect in the aesthetic zone in combination with a direct resin veneer can be a considerable challenge for clinicians, especially when striving to emulate the natural dentition. Shade-matching is a particular concern in achieving a natural-looking aesthetic result. Value enamels can also be used over selective areas of a Class IV restoration as needed to modify the perception of the chroma of underlying layers of artificial dentin and body enamel. This second and concluding part provides a discussion of how an advanced polychromatic composite layering technique can be used to meet the patient's aesthetic expectations.*

## **Learning Objectives:**

This article discusses how an advanced polychromatic composite layering technique is used to restore a Class IV/direct veneer/diastema. Upon reading this article, the reader should:

- Become familiar with how to properly select an opaquing agent, composite dentin, and enamel shades that elicit correct color value when performing a direct veneer on a discolored tooth substrate.
- Be able to integrate a large Class IV restoration with a direct veneer while closing a midline diastema through multilayered polychromatic stratification.

**Key Words:** adhesive, composite, conservative, veneer, Class IV, diastema
