comprehended in this department of astronomy The work is intended for the information of general readers especially for those who have acquired a relish for astronomical pursuits and who wish to become acquainted with the instruments by which celestial observations are made and to apply their mechanical skill to the construction of some of those which they may wish to possess With this view the Author has entered into a variety of minute details in reference to the construction and practical application of all kinds of telescopes which are not to be found in general treatises on Optics and Astronomy As Light is the foundation of astronomical science and of all the instruments used for celestial observation a brief description is given of the general properties of light of the laws by which it is refracted and reflected when passing through different mediums and of the effects it produces in the system of nature in order to prepare the way for a clear understanding of the principles on which optical instruments are constructed and the effects they produce As this as well as every other physical subject forms a part of the arrangements of the Creator throughout the material system the Author has occasionally taken an opportunity of directing the attention of the reader to the Wisdom and Beneficence of the Great First Cause and of introducing those moral reflections which naturally flow from the subject The present is the ninth volume which the Author has presented to the public and he indulges the hope that it will meet with the same favourable reception which his former publications have uniformly experienced It was originally intended to conclude the volume with a few remarks on the utility of astronomical studies and their moral and religious tendency but this has been prevented for the present in consequence of the work having swelled to a greater size than was anticipated Should he again appear before the public as an author the subject of discussion and illustration will have a more direct bearing than the present on the great objects of religion and a future world Broughty Ferry near Dundee August 1845 vii *The Practical Astronomer's Deep-sky Companion* Jess K. Gilmour, 2012-12-06 As an amateur astronomer with years of experience I marvel at the joy experienced by a beginner who successfully hunts down their first deep space object in a telescope No matter what age or skill level nailing a previously unobserved object through the eye piece both instantly defines their love of the hobby and gives a feeling of scientific accomplishment no matter how well known to others the object may be With the advancement in computer guided telescopes and automatic object centering the amateur astronomy hobby has experienced tremendous and unprecedented growth First timers are attending public observing sessions or summer star parties with low cost computer controlled telescopes and are instantly rewarded with views of celestial objects with strange names and numbers But what to look at Can I see it through my telescope For the seasoned observer the problem is different I've seen that object a thousand times can anybody show me something new Astrophotographers novice and seasoned often wonder about capturing new objects on film or CCD but first spend hours poring through star charts familiarizing themselves with the star field selecting guide star etc The contents of this book combines in a clear and concise manner information that will assist beginner novice intermediate and advanced amateur astronomy hobbyists The objects are all visible in medium to large aperture telescopes and provide a wide selection

of objects to observe or photograph vii Contents Introduction XI Andromeda 1 Aquarius 4 Aquila 7 Aries 9 Auriga 12 Bootes
