Rice, 2004-08-30 In this innovative book Stephen P Rice offers a new understanding of class formation in America during the several decades before the Civil War This was the period in the nation s early industrial development when travel by steamboat became commonplace when the railroad altered concepts of space and time and when Americans experienced the beginnings of factory production These disorienting changes raised a host of questions about what machinery would accomplish Would it promote equality or widen the distance between rich and poor Among the most contentious questions were those focusing on the social consequences of mechanization while machine enthusiasts touted the extent to which machines would free workers from toil others pointed out that people needed to tend machines and that that work was fundamentally degrading and exploitative *Minding the Machine* shows how members of a new middle class laid claim to their social authority and minimized the potential for class conflict by playing out class relations on less contested social and technical terrains As they did so they defined relations between shopowners and the overseers foremen or managers they employed and wage workers as analogous to relations between head and hand between mind and body and between human and machine Rice presents fascinating discussions of the mechanics institute movement the manual labor school movement popular physiology reformers and efforts to solve the seemingly intractable problem of steam boiler explosions His eloquent narrative demonstrates that class is as much about the comprehension of social relations as it is about the making of social relations and that class formation needs to be understood not only as a social

struggle but as a conceptual struggle , **International Symposium on History of Machines and Mechanisms Proceedings HMM 2000** Marco Ceccarelli, 2013-11-11 The International Symposium on History of Machines and Mechanisms is a new initiative to promote explicitly researches and publications in the field of the History of TMM Theory of Machines and Mechanisms It was held at the University of Cassino Italy from 11 to 13 May 2000 The Symposium was devoted mainly to the technical aspects of historical developments and therefore it has been addressed mainly to the IFToMM Community In fact most the authors of the contributed papers are experts in TMM and related topics This has been indeed a challenge convincing technical experts to go further in depth into the background of their topics of expertise We have received a very positive response as can be seen by the fact that these Proceedings contain contributions by authors from all around the world We received about 50 papers and after review about 40 papers were accepted for both presentation and publishing in the Proceedings This means also that the History of TMM is of interest everywhere and indeed an in depth knowledge of the past can be of great help in working on the present and in shaping the future with new ideas I believe that a reader will take advantage of the papers in these Proceedings with further satisfaction and motivation for her or his work historical or not These papers cover the wide field of the History of Mechanical Engineering and particularly the History of TMM **Robert Willis (1800-1875) and the Foundation of Architectural History** Alexandrina

Instruments and the Imagination Thomas L. Hankins, Robert J. Silverman, 2014-07-14 Thomas Hankins and Robert

Silverman investigate an array of instruments from the seventeenth through the nineteenth century that seem at first to be marginal to science magnetic clocks that were said to operate by the movements of sunflower seeds magic lanterns ocular harpsichords machines that played different colored lights in harmonious mixtures Aeolian harps a form of wind chime and other instruments of natural magic designed to produce wondrous effects By looking at these and the first recording instruments the stereoscope and speaking machines the authors show that scientific instruments first made their appearance as devices used to evoke wonder in the beholder as in works of magic and the theater The authors also demonstrate that these instruments even though they were often tricks were seen by their inventors as more than trickery In the view of Athanasius Kircher for instance the sunflower clock was not merely a hoax but an effort to demonstrate however fraudulently his truly held belief that the ability of a flower to follow the sun was due to the same cosmic magnetic influence as that which moved the planets and caused the rotation of the earth The marvels revealed in this work raise and answer questions about the connections between natural science and natural magic the meaning of demonstration the role of language and the senses in science and the connections among art music literature and natural science Originally published in 1995 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905
