The Green Factor:

The Green Factor In German Politics Gerd Langguth, 2019-07-11 The Green Party evolved out of a number of protest movements of the late 1960s and 1970s and became a major political factor in the Federal Republic of Germany in 1983 when it drew enough votes to send twenty seven members to the Bundestag The author follows the party's rise from new social and ecological groups to its current place in the Federal parliament and provincial legislatures He addresses the questions raised by Green Party members and by the unrest they have engendered whether they believe in parliamentary democracy what effect their policy of replacing delegates in parliament at midsession will have on the parliament and the party and how they relate to Germany's traditional political parties The answers to these and other questions form the background for an appraisal of the Green party in which the author traces the development of its role from a political irritant to a factor of serious influence [Handbook of Quantitative Sustainable Finance](#) Peter Tankov, Ruixun Zhang, 2025-12-12

Innovators Donald R. Kirsch,2023-11-07 Scientific breakthroughs that changed the way we understand the world and the fascinating

stories of the scientists behind them. Some of the most significant breakthroughs in science don't receive widespread recognition until decades later, sometimes after their author's death. Nobel Prize winner Max Planck, whose black body radiation law established the discipline of quantum mechanics, stated this as what has become known as Planck's principle, commonly summarized as "Science progresses one funeral at a time." In other words, for some truly groundbreaking discoveries, a new consensus builds only when proponents of the old consensus die off. Breakthrough discoveries require a paradigm shift, and it takes time and new minds for the new paradigm to be adopted. In *Innovators*, Donald Kirsch tells the stories of sixteen visionary scientists who suffered this fate, some now famous like Max Planck himself, Galileo, and Gregor Mendel, and some less well known. Among them are Barbara McClintock, who, working with Indian corn, discovered transposons, also known as jumping genes, which provide a major mechanism driving biological evolution; Rachel Carson, catalyst for the environmental movement; and Roger Revelle, the climatologist whose findings were the first to be described by the term global warming. The breakthroughs cover fields from biology to medicine to physics and earth sciences and include the discovery of prions, life-changing treatments such as drugs for high blood pressure, ulcers, and organ transplantation, the process of continental drift, and our understanding of how molecules form matter.
