Chiral Liquid Chromatography w Lough, 2012-12-06 While working as a chromatographer in the pharmaceutical industry it became apparent to the editor that there was a pressing need for a comprehensive reference text for analysts working on the resolution of enantiomers by liquid chromatography LC This need arises from the fact that whereas previously it was very difficult to determine enantiomers by direct means there is now a wide choice of direct LC methods At the same time regulatory authorities have been changing their attitudes towards the administration of pharmaceuticals as racemates partly because it is now possible to study the individual enantiomers Clearly this abundance of new information needs to be rationalized More importantly the chiral LC systems which are commercially available or readily accessible to the practising chromatographer needed to be reviewed and to a much greater extent than in

existing reviews or books discussed in terms of their practical application Accordingly this book is very much orientated towards the practical aspects of these commercially available and readily accessible chiral LC systems To this end it is written for practising chromatographers by a team of practising experienced chromatographers who have spent many years tackling the problems presented by resolving enantiomers by LC The practical aspects of common chiral LC systems cannot be fully understood if discussed in isolation

Computational Approaches in Supramolecular Chemistry G. Wipff, 2012-12-06 Supramolecular chemistry has been defined by J M Lehn as a highly interdisciplinary field of science covering the chemical physical and biological features of chemical species of higher complexity that are held together and organized by means of intermolecular noncovalent binding interactions Science 1993 Recognition reactivity and transport represent three basic functional features in essence dynamism which may be translated into structural features The purpose of the NATO workshop which took place September 1-5 1993 at the Bischberg near Strasbourg was to present computations which may contribute to the atomic level understanding of the structural and thermodynamical features involved in the processes of molecular recognition and supramolecular organization of supramolecular modeling Other The main focus was therefore on the many facets applications of computers in chemistry such as automation simulation of processes procedures for fitting kinetic or thermodynamic data computer assisted synthetic strategies use of data bases for structure elucidation or for bibliographic searches have an obvious impact in supramolecular chemistry as well but were not presented at the workshop

in analytical chemistry **Chiral Separations** D. Stevenson, I.D. Wilson, 2012-12-06 This volume represents the proceedings of a two day international meeting on chiral chromatography held at the University of Surrey between 3-4 September 1987. The meeting was jointly organized by the Chromatographic Society and the Robens Institute of the University of Surrey in response to the burgeoning interest in this rapidly maturing field of chromatography. Nowhere is this interest more evident than in the agrochemical and pharmaceutical industries where the implications of different pharmacological and toxicological activity for the individual enantiomers present in a racemic drug or insecticide is an increasing area of concern. Developments in the area of chiral separations are at last beginning to provide Scientists with the necessary tools to study how animals and man handle racemates and relate their observations to the observed biological effects of these substances. The development of robust and simple methods for the separation of enantiomers will therefore have a profound impact on safety evaluation and drug design. The meeting proved to be very successful with over 160 delegates from thirteen countries in Europe and America present to learn from the experiences of experts in the field of chiral chromatography and to hear about the latest developments. Hopefully in future symposia on chiral separations at the University of Surrey.

Principles of Asymmetric Synthesis Robert E. Gawley, Jeffrey Aube, 2012-05-29 The world is chiral. Most of the molecules in it are chiral and asymmetric synthesis is an important means by which enantiopure chiral molecules may be obtained for study and sale. Using examples from the literature of asymmetric synthesis this book presents a detailed analysis of the factors that govern stereoselectivity in organic reactions. After an explanation of the basic physical organic principles governing stereoselective reactions the authors provide a detailed annotated glossary of stereochemical terms. A chapter on Practical Aspects of Asymmetric Synthesis provides a critical overview of the most common methods for the preparation of enantiomerically pure compounds. Techniques for analysis of stereoisomers using chromatographic, spectroscopic and chiroptical methods. The authors then present an overview of the most important methods in contemporary asymmetric synthesis organized by reaction type. Thus there are four chapters on carbon-carbon bond forming reactions, one chapter on reductions and one on oxidations, carbon-oxygen and carbon-nitrogen bond forming reactions. This organization allows the reader to compare the leading methods for asymmetric synthesis in an appropriate context. A highlight of the book is the presentation and discussion of transition states at the current level of understanding for important reaction types. In addition, extensive tables of examples are used to give the reader an appreciation for the scope of each reaction. Finally, leading references are provided to natural product synthesis that has been accomplished using a given reaction as a key step. Authoritative glossary to aid understanding of stereochemical terminology. Explanations of the key factors influencing stereoselectivity with numerous examples organized by reaction type. A handy reference guide to the literature of asymmetric synthesis for practitioners in the field.
