SUICIDE RATE PREDICTION

The Prediction Of Suicide

Maurizio Pompili

The Prediction Of Suicide:

The Prediction of Suicide Aaron T. Beck, H. L. P. Resnik, Dan J. Lettieri, 1986 The prediction of suicide in a college and psychiatric population René Babin Bonin, 1995 Suicide: A Global Perspective Maurizio Pompili, 2012-09-19

In the year 2000 approximately one million people died from suicide a global mortality rate of 16 per 100 000 or one death every 40 seconds In the last 45 years suicide rates have increased by 60% worldwide Suicide is now among the three leading causes of death among those aged 15 44 years both sexes these figures do not include suicide attempts up to 20 times more frequent than completed suicide Suicide worldwide is estimated to represent 1.8% of the total global burden of disease in 1998 and 2.4% in countries with market and former socialist economies in 2020 Although traditionally suicide rates have been highest among the male elderly rates among young people have been increasing to such an extent that they are now the group at highest risk in a third of countries in both developed and developing countries Mental disorders particularly depression and substance abuse are associated with more than 90% of all cases of suicide however suicide results from many complex sociocultural factors and is more likely to occur particularly during periods of socioeconomic family and individual crisis situations e.g. loss of a loved one employment honour The economic costs associated with completed and attempted suicide are estimated to be in the billions of dollars One million lives lost each year are more than those lost from wars and murder annually in the world It is three times the catastrophic loss of life in the tsunami disaster in Asia in 2005 Every day of the year the number of suicides is equivalent to the number of lives lost in the attack on the World Trade Center Twin Towers on 9/11 in 2001 Everyone should be aware of the warning signs for suicide Someone threatening to hurt or kill him/herself or taking of wanting to hurt or kill him/herself someone looking for ways to kill him/herself by seeking access to firearms available pills or other means someone talking or writing about death dying or suicide when these actions are out of the ordinary for the person Also high risk of suicide is generally associated with hopelessness rage uncontrolled anger seeking revenge acting reckless or engaging in risky activities seemingly without thinking feeling trapped like there's no way out increased alcohol or drug use withdrawing from friends family and society anxiety agitation unable to sleep or sleeping all the time dramatic mood changes no reason for living no sense of purpose in life

Suicide Myths How to Help the Suicidal Person

Warning Signs of Suicide

Myth Suicidal people just want to die **Fact** Most of the time suicidal people are torn between wanting to die and wanting to live Most suicidal individuals don't want death they just want to stop the great psychological or emotional pain they are experiencing Listen Accept the person's feelings as they are Do not be afraid to talk about suicide directly Ask them if they developed a plan of suicide Expressing suicidal feelings or bringing up the topic of suicide Giving away prized possessions settling affairs making out a will Signs of depression loss of pleasure sad mood alterations in sleeping eating patterns feelings of hopelessness

Myth People who commit suicide do not warn others **Fact** Eight out of every 10 people who kill

themselves give definite clues to their intentions They leave numerous clues and warnings to others although clues may be non verbal or difficult to detect Remove lethal means for suicide from person's home Remind the person that depressed feelings do change with time Point out when death is chosen it is irreversible Change of behavior poor work or school performance Risk taking behaviors Increased use of alcohol or drugs Social isolation Developing a specific plan for suicide Myth People who talk about suicide are only trying to get attention They won't really do it Fact Few commit suicide without first letting someone know how they feel Those who are considering suicide give clues and warnings as a cry for help Over 70% who do threaten to commit suicide either make an attempt or complete the act Express your concern for the person Develop a plan for help with the person Seek outside emergency intervention at a hospital mental health clinic or call a suicide prevention center Myth Don't mention suicide to someone who's showing signs of depression It will plant the idea in their minds and they will act on it Fact Many depressed people have already considered suicide as an option Discussing it openly helps the suicidal person sort through the problems and generally provides a sense of relief and understanding Suicide is preventable Most suicidal individuals desperately want to live they are just unable to see alternatives to their problems Most suicidal individuals give definite warnings of their suicidal intentions but others are either unaware of the significance of these warnings or do not know how to respond to them Talking about suicide does not cause someone to be suicidal on the contrary the individual feels relief and has the opportunity to experience an empathic contact Suicide profoundly affects individuals families workplaces neighbourhoods and societies The economic costs associated with suicide and self inflicted injuries are estimated to be in the billions of dollars Surviving family members not only suffer the trauma of losing a loved one to suicide and may themselves be at higher risk for suicide and emotional problems Mental pain is the basic ingredient of suicide Edwin Shneidman calls such pain psychache¹ meaning an ache in the psyche Shneidman suggested that the key questions to ask a suicidal person are Where do you hurt and How may I help you If the function of suicide is to put a stop to an unbearable flow of painful consciousness then it follows that the clinician's main task is to mollify that pain Shneidman¹ also pointed out that the main sources of psychological pain such as shame guilt rage loneliness hopelessness and so forth stem from frustrated or thwarted psychological needs These psychological needs include the need for achievement for affiliation for autonomy for counteraction for exhibition for nurturance for order and for understanding Shneidman² who is considered the father of suicidology has proposed the following definition of suicide Currently in the Western world suicide is a conscious act of self induced annihilation best understood as a multidimensional malaise in a needful individual who defines an issue for which the suicide is perceived as the best solution Shneidman has also suggested that that suicide is best understood not so much as a movement toward death as it is a movement away from something and that something is always the same intolerable emotion unendurable pain or unacceptable anguish Strategies involving restriction of access to common methods of suicide have proved to be effective in reducing suicide rates however

there is a need to adopt multi sectoral approaches involving other levels of intervention and activities such as crisis centers There is compelling evidence indicating that adequate prevention and treatment of depression alcohol and substance abuse can reduce suicide rates School based interventions involving crisis management self esteem enhancement and the development of coping skills and healthy decision making have been demonstrated to reduce the risk of suicide among the youth Worldwide the prevention of suicide has not been adequately addressed due to basically a lack of awareness of suicide as a major problem and the taboo in many societies to discuss openly about it In fact only a few countries have included prevention of suicide among their priorities Reliability of suicide certification and reporting is an issue in great need of improvement It is clear that suicide prevention requires intervention also from outside the health sector and calls for an innovative comprehensive multi sectoral approach including both health and non health sectors e g education labour police justice religion law politics the media

The International Handbook of Suicide and Attempted Suicide Keith Hawton, Kees van Heeringen, 2000-11-21 Recent research in the area of suicidology has provided significant new insights in the epidemiological psychopathological and biological characteristics of suicidal behaviour The International Handbook of Suicide and Attempted Suicide is the first book to bring together this expertise and translate it into practical guidelines for those responsible for policy issues and for those involved in the treatment and prevention of suicidal behaviour Leading international authorities provide a truly comprehensive and research based reference to understanding treating and preventing suicidal behaviour They explore concepts and theories which best guide work within this field and detail key research which has supported conceptual developments preventive interventions and clinical treatment No self respecting worker in deliberate self harm and suicide prevention either clinical or research can afford to be without access to this comprehensive handbook possession and regular use may well become a marker of serious involvement in the subject This is the most comprehensive up to date informative and well written source of information on suicide and suicidal behaviour an

invaluable work of reference which will be essential for clinicians and researchers for many years to come Andrew Sims Emeritus Professor of Psychiatry St James's University Hospital Leeds UK British Journal of Psychiatry Suicide Explained Federico Sanchez, 2007-12-14 Finally a book that explains suicide a must read for the survivors of suicide who want to understand why suicide happens and it also should prove extremely helpful for anyone suffering mental disorders The material in this book should be incorporated into the curriculum of psychology and psychiatry because suicide is such a vital topic hardly covered in medical schools It is an important book for all professionals who deal with mental disorders in general and suicide in particular It is the authors fourth book where suicide is explained not as a mysterious process but as a natural consequence of the reactions of the brain under certain conditions when suffering mental disorders In this book on suicide the author begins with a brief summary of the statistics of the whos the hows and the wheres of suicide This gives us a clear idea of the magnitude of the problem of suicide of the cost not only in lives but of the emotional toll of the survivors as well as the financial burdens on society as a whole Then as an important first step to understanding the medical communitys standard approaches to mental disease he reviews briefly the current psychiatric terminology and the diagnostic tools concerning mental disorders He presents the most accepted current theories and models of suicide He explains what a psychiatric emergency is and what to expect if one ever encounters such a situation And he explains how suicide risk assessment is currently done along with other important considerations He proceeds to explain in every day language where possible his theory of how the brain works beginning with a simple explanation of how neurons communicate with each other Later he explains how the brain controls the body and how we see with the back of our heads how memory systems become a logical extension or expansion of our sensory and motor systems Awareness and attention are introduced first as an evolutionary tool that aids the senses gather more information from the environment and ultimately as tools that aid in thinking reasoning and constructing our past our lives and our identities But all this would mean nothing without the introduction of emotions and how the brain constructs contexts He explains how emotions are an integral part of memories and how these are related to contexts how basically the brain has created a very concise and compact filing memory system A clear explanation of how emotions are triggered regulated and dissipated is next These leads to a learned discussion of how these various systems can go haywire leading to mental disorders A brief but perhaps new and revolutionary approach to these mental disorders is presented next including Obsessive Compulsive Disorder Delirium Dementia and Other Amnesic Disorders Manic Depression and Depression and Schizophrenia Ultimately it becomes clear how under certain conditions these disorders can lead to suicide He then presents a suicide autopsy as an exercise to show how varied the opinions of experts in the field of suicidology are and compares it to his own theories and lets the reader decide for himself who is closer to the truth Finally he gives a few words of advice on various therapies and the rationality of their approaches and cautions against their limitations He closes with some important suggestions of how to lessen suicide rates particularly among the

young **Understanding Suicide and Its Prevention** Federico Sanchez, 2010-06-15 Finally a book that explains suicide using the latest research in suicidology A must read for mental health professionals and the survivors of suicide who want to understand why suicide happens The material in this book should be incorporated into the curriculum of psychology and psychiatry because suicide is such a vital topic that is hardly covered in medical schools due to the lack of a coherent theory of the brain in general and suicide in particular This is an important book for all professionals who deal with mental disorders in general and suicide in particular It is the author's fifth book where suicide is explained not as a mysterious process but as a natural consequence of the reactions of the brain under certain conditions when suffering mental disorders The author begins with a brief summary of the statistics of the whos the hows and the wheres of suicide This gives us a clear idea of the magnitude of the problem of suicide of the cost not only in lives but of the emotional toll of the survivors as well as the financial burdens on society as a whole Then as an important first step to understanding the medical community's standard approaches to mental disease he reviews briefly the current psychiatric terminology and the diagnostic tools concerning mental disorders He presents the most accepted current theories and models of suicide He explains what a psychiatric emergency is and what to expect if one ever encounters such a situation And he explains how suicide risk assessment is currently done along with other important considerations He proceeds to explain in everyday language where possible his theory of how the brain works beginning with a simple explanation of how neurons communicate with each other Later he explains how the brain controls the body and how we see with the back of our heads how memory systems become a logical extension or expansion of our sensory and motor systems Awareness and attention are introduced first as an evolutionary tool that aids the senses gather more information from the environment and ultimately as tools that aid in thinking reasoning and constructing our past our lives and our identities But all this would mean nothing without the introduction of emotions and how the brain constructs contexts He explains how emotions are an integral part of memories and how these are related to contexts how basically the brain has created a very concise and compact filing memory system A clear explanation of how emotions are triggered regulated and dissipated is next These lead to a learned discussion of how these various systems can go haywire causing mental disorders A brief but perhaps new and revolutionary approach to these mental disorders is presented next including Obsessive Compulsive Disorder Delirium Dementia and Other Amnesic Disorders Manic Depression and Depression and Schizophrenia Ultimately it becomes clear how under certain conditions these disorders can lead to suicide The difference between attempters and completers is also explained He then presents a suicide autopsy as an exercise to show how varied the opinions of experts in the field of suicidology are and compares it to his own theories and lets the reader decide for himself who is closer to the truth The fallacy of many expert opinions of where research needs to go is presented The book gives a few words of advice on various therapies and the rationality of their approaches and cautions against their limitations The book devotes a chapter to suicide prevention in the military and how these efforts are

bound to fail and another chapter on suicide prevention The author makes important suggestions of how to prevent suicide and lessen suicide rates particularly among the young And lastly a chapter is devoted to the specifics of grief for suicide survivors

The Neuroscience of Suicidal Behavior Kees van Heeringen, 2018-08-23 Nearly one million people take their own lives each year world wide however contrary to popular belief suicide can be prevented While suicide is commonly thought to be an understandable reaction to severe stress it is actually an abnormal reaction to regular situations Something more than unbearable stress is needed to explain suicide and neuroscience shows what this is how it is caused and how it can be treated Professor Kees van Heeringen describes findings from neuroscientific research on suicide using various approaches from population genetics to brain imaging Compelling evidence is reviewed that shows how and why genetic characteristics or early traumatic experiences may lead to a specific predisposition that makes people vulnerable to triggering life events Neuroscientific studies are yielding results that provide insight into how the risk of suicide may develop ultimately demonstrating how suicide can be prevented

Suicide Science Thomas Joiner, M. David Rudd, 2007-05-08 Suicide kills and maims victims traumatizes loved ones preoccupies clinicians and costs health care and emergency agencies fortunes It should therefore demand a wealth of theoretical scientific and fiduciary attention But in many ways it has Why Although the answer to this question is multi faceted this volume not supposes that one answer to the question is a lack of elaborated and penetrating

theoretical approaches The authors of this volume were challenged to apply their considerable theoretical wherewithal to this state of affairs They have risen to this challenge admirably in that several ambitious ideas are presented and developed If ever a phenomenon should inspire humility it is suicide and the volume's authors realize this Although several far reaching views are proposed they are pitched as first approximations with the primary goal of stimulating still more conceptual and empirical work A pressing issue in suicide science is the topic of clinical interventions and clinical approaches more generally Here too this volume contributes covering such topics as therapeutics and prevention comorbidity special populations and clinical risk factors

Suicide and Its Prevention Rene F. W. Diekstra, Ronald Maris, Stephen Platt, Armin

Schmidtke, Gernot Sonneck, 2023-10-20 In many countries of the world the number of persons that commit or attempt suicide has risen considerably over the past two decades Particularly among young people suicide rates have increased dramatically suicide now ranking as the second or third cause of death among them The causes of this development have been questioned by health care workers scientists and policy makers Although much still remains unknown it has become increasingly clear that one way in which a society affects the probability that an individual will die by his or her own hand is through the attitudes it adopts towards suicide Modern society confronts people more and more often with attitudes and models such as in the mass media that express a permissive stance towards voluntary death in a variety of circumstances Evidence suggests that imitation might indeed play a significant role in the frequency of suicide A related aspect is the attitudes care givers entertain themselves towards suicide This affects both the way in which they approach and treat individuals in suicidal crisis as well as the readiness of these individuals to look for professional help The present volume presents an overview of important recent work on the influences of societal and care givers attitudes on suicide as well as provoking premature suicidal deaths
