Excerpt from The Principles of Logic The following work makes no claim to supply any systematic treatment of Logic I could not pretend to have acquired the necessary knowledge and in addition I confess that I am not sure where Logic begins or ends I have adopted the title Principles of Logic because I thought that my enquiries were mainly logical and for logic at least must be fundamental About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

The Principles of Logic F. H. Bradley, 2015-06-24

Excerpt from The Principles of Logic Vol 2 1 In the Second Part of the foregoing Book we were concerned with negations We were employed in banishing some views of inference which appeared erroneous Form this negative process we turn with relief and with the hope of rest in a positive result But we must not deceive ourselves The positive result we have already reached offers a welcome in part illusive and a rest that is doomed to speedy disturbance We saw in all inference an ideal synthesis which united round a centre or centres of identity not less than two terms into one construction The conclusion was then a new relation of these terms and it was by an intuition that we perceived it to exist within the individual whole we had compacted And this account that we gave was not a false account for it was true of those inferences to which we applied ourselves But there are other reasonings no less important which we then ignored and which fall beyond it It was thus a theory provisional and limited in range 2 And there came a point where we had to transcend it In negative inference we were forced to contemplate the possibility of retaining the middle Book II Part I V 8

If our construction being reached we choose to rest in it if we refuse to isolate a single relation within that whole if we prefer to treat the entire compound synthesis as the conclusion we want are we logically wrong Is there any law which orders us to eliminate and where we can not eliminate forbids us to argue The question once asked is its own reply and it rings the knell of a blind superstition which vanishes in daylight If so we have been forced beyond our formula About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Introduction to the Principles of Logic in Criminology for Use in Law and Police

Practice Arthur Lothar Philipp,1938

The Principles of Logic C. A. Mace,1980

Principles of Logic George

Joyce,2018-01-24 From the Introduction This work is an attempt at a presentment of what is frequently termed the

Traditional Logic and is intended for those who are making acquaintance with philosophical questions for the first time Yet it is impossible even in a text book such as this to deal with logical questions save in connexion with definite metaphysical and epistemological principles Logic as the theory of the mind s rational processes in regard of their validity must necessarily be part of a larger philosophical system Indeed when this is not the case it becomes a mere collection of technical rules possessed of little importance and of less interest The point of view adopted in this book is that of the Scholastic philosophy and as far as is compatible with the size and purpose of the work some attempt has been made to vindicate the fundamental principles on which that philosophy is based From one point of view this position should prove a source of strength The thinkers who elaborated our system of Logic were Scholastics With the principles of that philosophy its doctrines and its rules are in full accord In the light of Scholasticism the system is a connected whole and the subjects traditionally treated in it have each of them its legitimate place When a writer adopts some other standpoint it is inevitable that his Logic must be remodeled if it is to be in harmony with his philosophical principles For some parts of the traditional science there will be no place in his scheme And though these subjects may find treatment in his work yet it will be manifest that they are present as

unwelcome guests only tolerated out of deference to custom and the exigencies of a popular demand In such a case a young student may well be excused if he fails to grasp the bearing of the question at issue *The Principles of Logic* F H
