Evolutionary Paleobiology of Behavior and Coevolution A.J. Boucot,2013-10-22 This book is the culmination of many years of research by a scientist renowned for his work in this field It contains a compilation of the data dealing with the known stratigraphic ranges of varied behaviors chiefly animal with a few plant and fungal and coevolved relations A significant part of the data consists of frozen behavior i e those in which an organism has been preserved while actually doing something as contrasted with the interpretations of behavior of an organism deduced from functional morphology important as the latter may be The conclusions drawn from this compilation suggest that both behaviors and coevolved relations appear infrequently following which there is relative fixity of the relation i e two rates of evolution very rapid and essentially zero This conclusion complies well with the author s prior conclusion that community evolution followed the same rate pattern In fact communities are regarded here as in large part expressions of both behavior and coevolved relations rather than as random aggregates controlled almost wholly by varied unrelated physical parameters tracked by organisms i e the concept that communities have no biologic reality being merely statistical abstractions The book is illustrated throughout with more than 400 photographs and drawings It will be of interest to ethologists evolutionists parasitologists paleontologists and palaeobiologists at research and post graduate levels *Merchant Vessels of the United States...* United States.
