Polyurethane Shape Memory Polymers W.M. Huang,Bin Yang,Yong Qing Fu,2011-09-08 Shape memory polymers SMPs are some of the most important and valuable engineering materials developed in the last 25 years These fascinating materials demonstrate remarkably versatile properties including capacity for actuation and stimulus responsiveness that are enabling technologists to develop applications used to explore everything from the outer reaches of space to the inside of the human body Polyurethane Shape Memory Polymers details the fundamentals of SMP makeup as well as their shape recovery features and their seemingly endless potential for use in applications ranging from the macro to submicron scales With an abundance of illustrations and vivid pictures to explain how SMPs and their composites work and how they can be used this book covers History and most recent developments in SMPs Thermomechanical properties and behavior of the polymers and their composites Modification of SMPs and novel actuation mechanisms Large scale surface pattern generation Multi shape memory effect Fabrication techniques Characterization of composites A must have reference for anyone working in the materials science and engineering fields this book outlines the properties such as light weight low cost and ability to handle high strain that make the easily processed SMPs so useful in fields including aerospace biomedicine and textiles It is intended to help readers understand and apply the knowledge and techniques presented to develop new innovations that will further benefit society

Givargizov,S.A. Grinberg,2012-12-06 This volume as the previous ones consists primarily of review articles However it also contains a large quantity of original material on the growth of crystals and films Priority is given to experimental work Only two articles are concerned exclusively with the theory of crystal growth Theoretical aspects are treated in several others This volume is divided into three parts Part I Epitaxy and Transformations in Thin Films stems from the current broad application of lasers and optical effects in general to crystal growth in particular the growth of thin films The first three articles of the book are devoted to this topic In particular the laser pulse vaporization method for which a comparatively slow deposition rate is typical which should not always be viewed as a drawback is distinguished by the unique kinetics of the initial growth stages These are not entirely explained However this method is completely suitable for oriented or generally ordered growth of films under otherwise equal conditions Another article of this section is based on use of ultrashort down to picosecond laser pulses It emphasizes the nonequilibrium processes of crystallization and decrystallization that are characteristic for such influences In particular material heated above its melting point and metastable states in the semiconductor melt exhibit these qualities **Advances in Membrane Biochemistry and Bioenergetics** Chong H. Kim,Henry Tedeschi,Joyce J. Diwan,John C. Salerno,2012-12-06 This book is formulated from the papers presented at the International Symposium on Membrane Biochemistry and Bioenergetics held at the Rensselaerville Institute Rensselaerville New York August 1986 in honor of Tsou E King on the occasion of the 30th anniversary of reconstitution of arespiratory chain system by Professor David Keilin and Tsou E King Professor Tsou E King to whom this volume is dedicated has made enormous contributions to the field of isolation and reconstitution of membrane proteins and has continued to explore the frontiers of bioener getics In particular his persistent proposals on the existence of ubiquinone

binding proteins from conceptualization to experimentation eventually convinced many scientists to study these proteins further Professor King's preparation of reconstitutively active succinate dehydrogenase opened a new avenue in the field of membrane bioenergetics and his work has been greatly appreciated The purpose of the symposium was to bring together scientists from diverse disciplines related to membrane bioenergetics to discuss the recent developments in the field This symposium initiated by the Capital District Bioenergetics Group was attended by 100 scientists 80 of whom presented their recent discoveries The symposium was arranged in a sequence of platform lectures poster presentations and discussion sessions so that all the participants had opportunities to discuss the subjects presented Most of the participants contributed a chapter to this volume We would like to express our regret to many other scientists including Professor King's friends colleagues and students who could not attend due to various reasons
