Charles Darwin, Geologist Sandra Herbert, 2005 Pleasure of imagination I a geologist have illdefined notion of land covered with ocean former animals slow force cracking surface c truly poetical from Charles Darwin s Notebook M 1838 The early nineteenth century was a golden age for the study of geology New discoveries in the field were greeted with the same enthusiasm reserved today for advances in the biomedical sciences In her long awaited account of Charles Darwin s intellectual development Sandra Herbert focuses on his geological training research and thought asking both how geology influenced Darwin and how Darwin influenced the science Elegantly written extensively illustrated and informed by the author s prodigious research in Darwin s papers and in the nineteenth century history of earth sciences Charles Darwin Geologist provides a fresh perspective on the life and accomplishments of this exemplary thinker As Herbert reveals Darwin s great ambition as a young scientist one he only partially realized was to create a simple geology based on movements of the earth s crust Only one part of his scheme has survived in close to the form in which he imagined it a theory explaining the structure and distribution of coral reefs Darwin collected geological specimens and took extensive notes on geology during all of his travels His grand adventure as a geologist took place during the circumnavigation of the earth by H M S Beagle 1831 1836 the same voyage that informed his magnum opus On the Origin of Species Upon his return to England it was his geological findings that first excited scientific and public opinion Geologists including Darwin s former teachers proved a receptive audience the British government sponsored publication of his research and the general public welcomed his discoveries about the earth s crust Because of ill health Darwin s years as a geological traveler ended much too soon his last major geological fieldwork took place in Wales when he was only thirty three However the experience had been transformative the methods and hypotheses of Victorian era geology Herbert suggests profoundly shaped Darwin s mind and his scientific methods as he worked toward a full blown understanding of evolution and natural selection Powerful Primary Geography Anne M.
