The Principles of Political Economy and Taxation David Ricardo, 2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1903 edition Excerpt HE rise in the price of commodities in consequence of taxation or of difficulty of production will in all cases ultimately ensue but the duration of the interval before the market price will conform to the natural price must depend on the nature of the commodity and on the facility with which it can be reduced in quantity If the quantity of the commodity taxed could not be diminished if the capital of the farmer or of the hatter for instance could not be withdrawn to other employments it would be of no consequence that their profits were reduced below the general level by means of a tax unless the demand for their commodities should increase they would never be able to elevate the market price of corn and of hats up to their increased natural price Their threats to leave their employments and remove their capitals to more favoured trades would be treated as an idle menace which could not be carried into effect and consequently the price would not be raised by diminished production Commodities however of all descriptions can be reduced in quantity and capital can be removed from trades which are less profitable to those which are more so but with different degrees of rapidity In proportion as the supply of a particular commodity can be more easily reduced without inconvenience to the producer the price of it will more quickly rise after the difficulty of its production has been increased by taxation or by any other means Corn being a commodity indispensably necessary to every one little effect will be produced on the demand for it in consequence of a tax and therefore the supply would not probably be long excessive even if the producers had great difficulty in removing their capitals from the land For
