

Chiasmus in Ancient Greek and Latin Literatures

John W. Welch

Notwithstanding the fact that most recent scholarly attention has dealt with the occurrence of chiasmus in ancient Near Eastern languages and literatures, a significant amount of chiasmus is to be found in ancient Greek and Latin literatures as well. Indeed, the word „chiasmus“ itself stems from the Greek word *chiazerein*, meaning to mark with or in the shape of a cross, and chiasmus has been earnestly studied in Greek and Latin syntax and style far more extensively and many years longer than it has even been acknowledged in the context of Semitic and other ancient writings.

That chiasmus has received more attention in the Classical setting than in other ancient literatures is at the same time both ironic and yet completely understandable. The irony lies in the fact that more scholarly acceptance and utilization of chiasmus is found in connection with the appreciation of Western literary traditions than in the study of other ancient literatures, whereas chiasmus is relatively simple and certainly less informative in respect to the Greek and Latin authors than it is in regard to many of the writers from other arenas of the ancient world. One would expect the greater efforts to be made where the rewards promise to be the more attractive. Yet this situation is also easily explained. For one thing, numerous Western scholars have exhaustively studied secular Greek literary texts since the thirteenth century, and Latin, since it was spoken in Rome. The use of literary devices in Hebrew literature, on the other hand, has only been given relatively sparse scholarly treatment in the West for something over two hundred years, and the study of figures of speech in most other ancient languages, dialects and literatures can still be said to be somewhat in a state of infancy. In addition, since the occurrence of chiasmus in the Classical European texts is often a relatively simple phenomenon, it has usually been an easy thing for commentators to detect, natural to comment upon, and relatively inconsequential and uncontroversial once observed.

This, however, should not be taken to imply that the study of chiasmus or related structural aspects of Greek or Latin literary art forms is merely a mechanical exercise without much interpretative or appreciative value. To the contrary, the study of chiasmus in European traditions can be rewarding in several respects, both as to the Classical literatures themselves and as to the other bodies of writing with which they are compared and contrasted. For example, the frequency of chiasmus in a given author's writing can be used as a guide in evaluating the author's tendencies to embellish upon or vary from direct, „natural“ forms of speech, and when comparing literatures, one can see certain similarities between chiasmus in early Greek writing, particularly in Homer, and chiasmus in other ancient writings, such as those studied in the earlier chapters of this volume. Although, as this essay will show, the complexity of chiasmus diminishes markedly in the later Greek and Latin writers (setting the style for most Western writing ever since), it is still important to observe and appreciate the extent chiasmus was used by them in order to confirm and compare the use of chiasmus in other ancient, especially biblical, texts.

Chiasmus appears in Greek and Latin writing from the time of Homer to the later Roman authors. Not all Classical compositions, however, use chiasmus to the same extent, and frequently it appears to be more of a poetical device (as it often is when it occurs in English¹) than an independent structural principle or form. Nevertheless, certain authors employ chiasmus in a complex fashion and for them the form serves true structural, and not mere ornamental functions. This will be demonstrated as their writings are examined, first as to Homer and then as to the later Latin and Greek writers.
