PTM , 1962 **Perceptual Learning** Barbara Doshier, Zhong-Lin Lu, 2020-10-13 A comprehensive and integrated introduction to the phenomena and theories of perceptual learning focusing on the visual domain Practice or training in perceptual tasks improves the quality of perceptual performance often by a substantial amount This improvement is called perceptual learning in contrast to learning in the cognitive or motor domains and it has become an active area of research of both theoretical and practical significance This book offers a comprehensive introduction to the phenomena and theories of perceptual learning focusing on the visual domain Perceptual Learning explores the tradeoff between the competing goals of system stability and system adaptability signal and noise retuning and reweighting and top down versus bottom down processes It examines and evaluates existing research and potential future directions including evidence from behavior

physiology and brain imaging and existing perceptual learning applications with a focus on important theories and computational models. It also compares visual learning to learning in other perceptual domains and considers the application of visual training methods in the development of perceptual expertise and education as well as in remediation for limiting visual conditions. It provides an integrated treatment of the subject for students and researchers and for practitioners who want to incorporate perceptual learning into their practice. Practice or training in perceptual tasks improves the quality of perceptual performance often by a substantial amount. This improvement is called perceptual learning in contrast with learning in the cognitive or motor domains. Perceptual learning has been a very active area of research of both theoretical and practical interest. Research on perceptual learning is of theoretical significance in illuminating plasticity in adult perceptual systems and in understanding the limitations of human information processing and how to improve them. It is of practical significance as a potential method for the development of perceptual expertise in the normal population for its potential in advancing development and supporting healthy aging and for noninvasive amelioration of deficits in challenged populations by training. Perceptual learning has become an increasingly important topic in biomedical research. Practitioners in this area include science disciplines such as psychology, neuroscience, computer sciences, and optometry and developers in applied areas of learning, game design, cognitive development, and aging, and military and biomedical applications. Commercial development of training products, protocols, and games is a multi-billion dollar industry. Perceptual learning provides the basis for many of the developments in these areas. This book is written for anyone who wants to understand the phenomena and theories of perceptual learning or to apply the technology of perceptual learning to the development of training methods and products. Our aim is to provide an introduction to those researchers and students just entering this exciting field to provide a comprehensive and integrated treatment of the phenomena and the theories of perceptual learning for active perceptual learning researchers and to describe and develop the basic techniques and principles for readers who want to successfully incorporate perceptual learning into applied developments. The book considers the special challenges of perceptual learning that balance the competing goals of system stability and system adaptability. It provides a systematic treatment of the major phenomena and models in perceptual learning, the determinants of successful learning, and of specificity and transfer. The book provides a cohesive consideration of the broad range of perceptual learning through the theoretical framework of incremental learning, of reweighting evidence that supports successful task performance. It provides a detailed analysis of the mechanisms by which perceptual learning improves perceptual limitations, the relationship of perceptual learning and the critical period of development, and the semi-supervised modes of learning that dominate perceptual learning. It considers limitations and constraints on learning multiple tasks and stimuli simultaneously, the implications of training at high or low levels of performance, accuracy, and the importance of feedback to perceptual learning. The basis of perceptual learning in physiology is discussed along with the relationship of visual perceptual learning to learning in other sensory domains. The

book considers the applications of perceptual learning in the development of expertise in education and gaming in training during development and aging and applications to remediation of mental health and vision disorders Finally it applies the phenomena and models of perceptual learning to considerations of optimizing training *Scientific Jury Selection* Joel D. Lieberman, Bruce Dennis Sales, 2007 Given the importance of trial consultants to the modern day practice of law Scientific Jury Selection is designed to be informative for psychologists other professionals interested in trial consulting e g sociologists communication experts marketing researchers psychiatrists and social workers and attorneys The authors provide a thorough review of the most common techniques used to select jurors and a critical social science based evaluation of the ultimate effectiveness of these methods The nature and mechanics of the voir dire process the use of community surveys and the influence of demographic factors on scientific jury selection are among the many topics given a close examination by the two authors who are pioneers in the field Psychologists and other social scientists as well as practicing trial consultants who read the book will gain a better understanding of the current state of research relevant to scientific jury selection emerging trends and areas in which new research needs to be conducted to advance the field Attorneys who read the book will be better positioned to decide whether to hire consultants to assist in future litigation and if so what types of services these consultants should provide Jacket PsycINFO Database Record c 2007 APA all rights reserved **The Zen of Exotic**

Computing Peter M. Kogge, 2022-12-07 The Turing von Neumann model of computing is dominant today but is by no means the only one This textbook explores an important subset of alternatives including those such as quantum and neuromorphic which receive daily news attention The models are organized into distinct groups After a review of the Turing von Neumann model to set the stage the author discusses those that have their roots in the Turing von Neumann model but perform potentially large numbers of computations in parallel models that do away with the preplanned nature of the classical model and compute from just a statement of the problem others that are simply mathematically different such as probabilistic and reversible computation models based on physical phenomena such as neurons and finally those that leverage unique physical phenomena directly such as quantum optical and DNA based computing Suggested readings provide a jumping off point for deeper learning A supplemental website contains chapters that did not make it into the book as well as exercises projects and additional resources that will be useful for more in depth investigations The Zen of Exotic Computing is intended for computer science students interested in understanding alternative models of computing It will also be of interest to researchers and practitioners interested in emerging technology such as quantum computing machine learning and AI
